How to read Factsheet

Application Amount for Fresh Subscription	This is the minimum investment amount for a new investor in a mutual fund scheme,	Modified Duration	Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.
AUM	AUM or Assets Under Management refers to the recent updated cumulative market value of investments managed by a mutual fund or any investment firm.	NAV	The NAV or the Net Asset Value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.
Benchmark	A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE200, BSE500, 10-Year Gsec.	Nature of Scheme	The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.
Beta	Beta measures how much an investment's price moves relative to the overall stock market.	Rating Profile	Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.
Exit Load	Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is deducted from the prevailing NAV at the time of redemption. For instance, if the NAV is ₹100 and the exit load is 1%, the redemption price would be ₹99 per unit.	Sharpe Ratio	The Sharpe ratio measures the excess return of an investment per unit of its risk or volatility
Entry Load	A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry load is charged at the time an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is ₹100 and the entry load is 1%, the investor will enter the fund at ₹101.	SIP	SIP or Systematic Investment Plan works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investormay opt for an SIPthat invests ₹500 every 15 of the month in an equity fund for a period of three years.
Note	SEBI, vide circular dated June 30, 2009 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the services rendered by the distributor.	Standard Deviation	Statistical measurement that quantifies the average amount of variation or dispersion in a set of data values relative to their mean
Fund Manager	An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.	Yield to Maturity	The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity.YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.
Holdings	The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/ securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.	Tracking Difference	Tracking Difference is the annualized difference of daily returns between the index and the NAV of the Index Fund.
Minimum Additional Amount	This is the minimum investment amount for an existing investor in a mutual fund scheme.		

CEO speak

Discipline over market timing

There are always mixed levels of performance in the markets over a long period of time. Over any long investment journey, there may be periods of strong performance, phases of consolidation and some testing times of uncertainty. We are going through such a phase of uncertainty and subdued market returns that can test the patience of even seasoned investors. However, the challenge is not the volatility itself but how we interpret it.

Headline returns do not tell the whole story

While broad market returns have remained muted, the experience across mutual fund categories has been differentiated.

Over the two years to August 2026, average SIP returns in many mid-cap and small-cap categories have been in double digits, compared with point-to-point category returns of low single digits over the same period. Average XIRR of SIPs in this period in mid cap funds has been 11.22% and small cap funds 12.05%. Further the average return of SIPs in the top 10 funds in the same space and period is around 15% and 19% in mid-cap and small -cap funds respectively. This tells us the story that there have been many mutual funds that have been able to capitalise on opportunities in specific sectors and fund categories even when the headline returns have been muted. (source: MFI360 Explorer dated Aug 2026)

This tells us two things.

First, markets are not uniform. Even during difficult periods, there can be pockets of growth where select sectors and companies continue to demonstrate healthy underlying business performance.

Second, an investor investing systematically through volatility can have a very different experience from someone looking only at point-to-point market returns.

A two-year return is only part of the journey

I increasingly see newer investors looking at the subdued returns of the past couple of years and becoming concerned about their investments.

But a return number viewed in isolation tells us only what happened between two dates.

It does not tell us about the investor who is investing towards a financial goal ten years away and whose journey may simply have begun with two years of flat returns. Nor does it tell us about the investor who has already been invested for five or seven years and has experienced enough market cycles to know that one weak period need not derail a long-term goal.

That distinction matters. View your investments as per your financial goals.

SIPs: Discipline over market timing

When markets decline, the same SIP amount buys more units at lower NAVs. When markets rise, it buys fewer. This rupee-cost-averaging mechanism reduces an investor's dependence on correctly identifying market tops and bottoms.

History offers useful perspective.

During the 2008–09 correction, markets fell by approximately 60%. The 2010–11 cycle saw another correction of roughly 27%. Investors living through those periods had no way of knowing exactly when markets would bottom.

Yet investors who continued their SIPs through those corrections and remained invested over the subsequent 10–15 years saw double-digit annualised SIP returns.

Investors are increasingly choosing discipline

The growing participation in SIPs also suggest the adoption of this discipline way of investing among investors and investor maturity. SIP contributions reached Rs 32297 Crores in August 2026 with 1001.79 lakh contributing SIP accounts. (Source: AMFI)

The more useful question during difficult periods may therefore be less about “When will the market recover?” and more about:

“Has anything changed in my financial goal, my time horizon or my ability to stay invested?”

If the answer is no, sometimes the most important investment decision is simply to continue the journey.

Nowhere to hide: Global macro factors weigh on returns

Equity Market Update & Outlook:

- Indian equities saw broad-based equity market correction with Nifty-50 Index down 6.0%. Nifty Midcap 150 Index and Nifty Smallcap 250 Index also fell 7.1% and 3.1% respectively.
- The sharp correction was driven by a spike in crude oil prices (Brent up 14% during September 2026) amid renewed Middle East tensions, a broad developed market hiking cycle across US, Japan and other economies. Weaker INR, resumption of FII outflows, heavy equity supply driven by IPOs and regulatory uncertainty in select sectors like Financials and Healthcare, also weighed on market performance.
- All major sectoral indices ended the month in negative territory. IT and Auto declined the most with 11% and 9% respectively. Capital Goods, Realty and Bank Index fell 6% each. Defensives like FMCG and Utilities outperformed the market, falling 3% and 1% respectively.

Global market update:

- MSCI EM (-0.8%) outperformed MSCI World (-1.3%) and performed broadly in-line with S&P500 (-0.5%). A global resumption in the AI trade led Taiwan (+3.9%) and Korea (+2.5%) to outperform MSCI EM index. FOMC hiked the Fed rate by 25bps to 3.75-4% (with another hike expected by end of the year), European Central Bank raised policy rates by 25bps and Bank of Japan also raised their benchmark policy rate by 25bps to 1.25%
- FII flows** turned negative again in September, with selling of \$4.1bn in September vs inflows of \$2.4bn in August taking the total selling to US\$28.3bn in 2026YTD. DII flows continued to remain strong with \$8.1bn inflows in September 2026 supported by steady SIP book. A crowded primary-market, with more than \$7bn raised through IPO/ QIPs in September 2026, continued to absorb liquidity from secondary market. The deal pipeline remains strong for 3QFY27 as well.
- India's **forex reserves** remained healthy at \$747.6bn as on 25th September 2026, however, they have come down from record highs of \$785.7bn observed at the beginning of the month. INR depreciated by 0.7% in September, with depreciation during 2026 at 6.6%.
- India **CPI (consumer price index)** rose to 4.8% YoY in August vs 4.5% in July. Core-Core inflation (i.e. inflation ex petrol and diesel ex precious metals) marginally inched up to 2.9% YoY from 2.6% YoY in July.
- Industrial production (IIP) growth** accelerated in August to 8.0% YoY from 6.7% in July.

Global Market Indices

Indices	Last Close	1 Month (Change)	CYTD 26 (Change)
International (in USD)			
MSCI World	4,903	-1.3%	10.7%
Dow Jones	50,906	-4.3%	5.9%
S&P 500	7,652	-0.5%	11.8%
MSCI EM	1,705	-0.8%	21.4%
MSCI Europe	2,744	-4.6%	3.8%

MSCI Korea	1,483	2.5%	95.5%
MSCI Brazil	1,903	3.0%	15.6%

- **Gross GST revenue collection** was Rs 2.04tn in September 2026, up 14.7% YoY. The strong growth was despite rationalization of GST rates from 22nd Sep 2025.
- In line with expectations, RBI has hiked **repo** rate by 25bps to 5.5% at its latest policy meeting. RBI has also shifted its monetary policy stance from 'neutral' to 'calibrated tightening'
- For India as a whole, **south-west monsoon** ended with rainfall being 13% below long-period average; its weakest over the past 11 years on back of a strong El Nino. However, Kharif sowing was healthy merely 1% below last year. On water reservoir levels, Southern and Northern India have lower reservoir levels compared to other regions.

Valuations

Nifty-50 now trades at 17.0x 1-year forward PE, which is 1SD below its historical long-term averages. This is now at 13% discount to its 5-year average and 10% discount with its 10-year average. This is despite the fact that consensus EPS estimate for CY26/27 has largely remained unchanged in September 2026 as per Bloomberg.

Macro View

Major global agencies upgraded India's FY27 GDP growth forecasts to around 7% during September 2026. The strong growth upgrade is the result of: (i) Cyclical recovery that has taken place from 2H25, (ii) strength of several high-frequency indicators (auto, earnings, credit) and (iii) strong rebound in exports, backed by sharp depreciation of the currency, lower tariffs and various ongoing BTA/ FTA with countries. With stable fiscal deficit, government capex and infra spending should remain strong. However, risk of a below normal monsoon with negative consequences for food production and higher food inflation remains. Also, India could face downside risks from rising global energy prices on continued disruption to Middle East supplies.

Outlook

We believe India's growth remains quite resilient despite the global macro-economic challenges. We expect India's investment cycle to be on a medium-term uptrend supported by government investment in infrastructure, support to manufacturing and pickup in private investments. Announcements of potential trade deals with EU and US should help support exports. Corporate earnings recovery continues with strong 1QFY27 earnings growth and more earnings beat than misses over consensus estimates. Nifty valuations are now trading 1SD below 10-year averages. We remain constructive on Indian equities on a longer-term basis. Amid global uncertainty, corporate earnings growth is likely to be the driver of market returns in the near-term.

Key drivers for future

We see the following positives for the Indian market:

- **Corporate earnings recovery:** Corporate earnings had seen consistent downgrades from 2HFY25 driven by slowing government capex, liquidity tightening and consumption slowdown in key sectors. This was one of the key reasons for FII outflows over the past couple of years. With RBI's regulatory easing, government measures on taxation (GST/ income tax) and lower tariffs by US, we see earnings growth recovering well.
- **Recovery in private capex:** Industry capacity utilization based on RBI survey data is at a reasonably high level and indicates potential for increase in private capex going forward. Also, continued expansion of the Production Linked Incentive (PLI) scheme is likely to further increase private investments in targeted sectors. We also expect higher private capex in renewable energy.
- **Trade deals:** Potential trade deals with EU and US would be a tailwind for Indian manufacturing over the medium term and should encourage private sector investments.

On the headwinds, we have

- **Rising global yields** are likely to remain a headwind going forward. With growth remaining broadly resilient in India, rate hikes will depend on US rate hike cycle and if inflationary pressures remain persistent domestically.
- **Global commodity prices:** Benign global prices of crude oil and fertilizers have been a positive for India from inflation, fiscal deficit and corporate margins perspective in 2024 and 2025. However, these trends have now reversed due to geopolitical conflict and will be a headwind for India in 2026-27.
- **Below normal monsoon:** Leading to higher food inflation and negative impact on consumption and govt. budget.
- **Other factors / risks:** Sharp slowdown in government capex.

* Returns mentioned in the report are the Total Return or TR variants of the respective domestic indices. USD return for global indices.

Past performance may or may not be sustained in future and is not a guarantee of any future returns.

DEBT MARKETS

September 2026

Rates Recalibration

September marked a broad-based repricing across global and Indian debt markets, with bond prices falling as the Middle East conflict prolonged the energy shock. Brent crude oil surged, averaging US\$ 102/bbl; reigniting concerns over global inflation. Inflation persistence led the US Federal Reserve to raise rates for the first time since CY23. The policy pivot in combination with the fiscal fears have led to a bond selloff, with the US 10Y benchmark yield breaching the 5% mark and the 30-year hitting about a 22-year high. US equities were mixed with tech stocks held their ground, but broader markets struggled. India was hit hardest among major markets, and sentiment was weak with FIIs pulling out US\$ 4.1 bn from equities and US\$ 1.7 bn from bonds, the Rupee weakened, and RBI continued to tackle the excess surplus system liquidity.

The oil price shock reignited concerns around higher inflation and thereby, a shift towards tighter policy expectations by key Central Banks. The US Fed FOMC unanimously voted to raise the federal funds rate by 25 bps to a target range of 3.75%-4.00%, the first hike since CY23. The dot plot turned decisively hawkish as well, with 16 of 18 officials projecting at least one more hike by end-2026, with the median rate forecast rising to 4.1% from 3.75% in June. Following the employment data and PCE inflation figures, market expectations for a Oct'26 rate hike have retreated considerably with ~75% probability of a status-quo policy on 28-Oct. Meanwhile, last month, the US treasury yields hardened, and the 30Y treasury paper touched multi-year highs; the rates recalibration has been a global phenomenon as a combination of factors of elevated oil prices, fiscal worries in some countries, and a shift towards tighter monetary policy globally.

For India too it was a similar story primarily driven by higher oil prices which continued to dampen sentiments. In the milieu of global rates hardening, almost across the globe, in Sep'26, Indian markets too reeled under pressure, with FII outflows amounting to US\$ 5.9bn in Sept'26, of which debt outflows amounted to US\$ 1.7bn, the highest monthly outflow in last 18-months.

While most AE central banks have already tightened policy, most banks have a hawkish tilt. India's RBI-MPC too has pivoted on its policy rates after having stayed pat on rates for three-straight policies (esp. since the US-Iran conflict broke out). The RBI MPC on 7-October in a unanimous vote decided to hike the policy rate by 25 basis points, taking the Repo Rate to 5.50% and changing the policy stance to 'calibrated tightening'. The MPC highlighted increasing inflation risks, including the broadening of price pressures, elevated global commodity prices, deficient monsoon conditions and El Niño.

The MPC revised its FY2026-27 real GDP growth forecast up by 40 bps to 7.1%, reflecting resilient domestic demand, strong investment and robust export activity despite global headwinds. In contrast, the CPI inflation forecast was raised to 5.2%, with inflation expected to peak at 6.0% in Q3 before moderating to 5.7% in Q4; Interestingly, core inflation is projected at 4.4%. The revisions point to a stronger growth outlook but a less benign and more persistent inflation environment.

In summary, the MPC has adopted a hawkish but measured policy approach, delivering its first 25 bps rate hike in 44 months and moving the stance from neutral to calibrated tightening. The decision signals that rate cuts are off the table in the near term but does not imply a predetermined or aggressive hiking cycle. In our view, the Repo rate could rise by a further 50 bps to 6.00% in this cycle, although additional tightening would require a renewed deterioration in the inflation outlook or a materially higher global-rate environment. In parallel, the RBI is likely to continue actively managing surplus liquidity while monitoring the impact of policy on growth and credit conditions.

Fund positioning

The MPC's 25 bps rate hike was broadly in line with market expectations. While the market was divided on a stance change, the MPC changed the policy stance to 'calibrated tightening', which resulted in a knee jerk reaction with yields moving up sharply. However, later on the Governor clarified that calibrated tightening was in context of policy guidance going forward and should be read as a milder form of tightening. This, along with the fact that two MPC members were not in favour of changing the stance, infers that policy rates could reach a terminal rate of 6%. Further policy action would be mainly dependent on global markets and crude prices.

Current market sentiment remains negative, with risks remaining pertaining to global markets, energy prices and possible further OMO sales. We have remained underweight on duration versus peers across our funds. However, with US Treasury yields reaching decadal highs and our rates also having moved significantly higher, valuations are becoming favourable. We will keep evaluating incoming data and look to opportunistically add duration across our funds on any signs of sustained moderation of US Treasury yields or crude prices.

Investors with short-term investment horizon can look at the less than 1 year bucket, i.e. Ultra Short Duration, Money Market Fund and Low Duration Fund as they offer pick-up over the Liquid category.

For investors with a medium-term investment horizon, Corporate Bond category can be a good investment opportunity as it provides reasonable accrual in a lower duration product.

For investors who can look at tactical allocations with a medium-term horizon, Short Duration and Banking and PSU categories can also be possible avenues.

RBI Monetary Policy Review

Policy pivots to 'Calibrated Tightening' as Inflation Risks Build

The MPC in a unanimous vote decided to hike the policy rate by 25 basis points, taking the Repo Rate to 5.50% and changing the policy stance to 'calibrated tightening'.

Our View: The RBI has pivoted to a more hawkish but measured policy approach. On policy stance, while two MPC members dissented & preferred neutral stance, the change basically signals that rate cuts are off the table and that future action will be limited to further hikes or a pause. We expect 50 bps of additional tightening in our base case and overall, we expect it to be a shallow tightening cycle with the Repo Rate potentially reaching 6.00%. Any incremental tightening beyond 6.00% would likely require a renewed deterioration in inflation, particularly from oil, El Niño or second-round effects, or a materially higher global-rate environment.

While the MPC hiked policy rates, the RBI has retained a wait-and-watch approach on liquidity. We still believe that the RBI MPC is likely to continue draining surplus liquidity through VRRRs, OMO sales and potentially FX sell/buy swaps.

Key policy highlights and our take

The MPC highlighted increasing inflation risks, including the broadening of price pressures, elevated global commodity prices, deficient monsoon conditions and El Niño.

While there is some evidence of elevated inflation expectations and generalisation of inflation, there are limited signs of supply side pressures getting embedded in pricing behaviour. For now, the RBI remains focused on containing second-round effects of inflation.

Growth-inflation dynamics: The MPC revised its FY2026–27 real GDP growth forecast up by 40 bps to 7.1%, reflecting resilient domestic demand, strong investment and robust export activity despite global headwinds. In contrast, the CPI inflation forecast was raised to 5.2%, with inflation expected to peak at 6.0% in Q3 before moderating to 5.7% in Q4; core inflation is projected at 4.4%. The revisions point to a stronger growth outlook but a less benign and more persistent inflation environment.

Inflation risks are building, and the RBI in its bi-annual MPR did emphasize on how price pressures are starting to broaden. In the MPR, it explained how the distribution of CPI inflation points to a progressive broadening of inflationary pressures. In Aug'26, around 37% of the CPI basket registered inflation above 4% as compared to 23% in Apr'26.

On liquidity, the RBI stated that it will use an appropriate mix of liquidity-management tools and proactively manage system liquidity with the objective of aligning the weighted average call rate (WACR) with the policy repo rate. System liquidity was in substantial surplus during August and September, averaging INR 5.9 lakh crore under the liquidity adjustment facility (LAF) since the previous MPC meeting. The RBI conducted 55 variable-rate reverse repo auctions, including two term auctions, and undertook INR 1.0 lakh crore of OMO sales to absorb surplus liquidity; keeping the overnight rates near the lower bound of the policy corridor. We continue to believe that apart from seasonal leakage (via CiC during festive season, etc.), the RBI is likely to use policy tools such as VRRRs, OMO Sales and possibly FX sell/buy swaps to continue to drain system liquidity surplus.

Table 1: MPC's growth and inflation forecasts are laid out below:

Period	Growth Forecast					Inflation Forecast				
	Apr'26	Jun'26	Aug'26	Oct'26	Revision (last policy)	Apr'26	Jun'26	Aug'26	Oct'26	Revision (last policy)
Q1FY27	6.8%	6.6%	7.0%	7.8%	0.8%	4.0%	4.2%	3.9%	3.9%	0.0%
Q2FY27	6.7%	6.3%	6.4%	7.2%	0.8%	4.4%	5.1%	4.7%	4.9%	0.2%
Q3FY27	7.0%	6.5%	6.5%	6.9%	0.4%	5.2%	5.9%	5.9%	6.0%	0.1%
Q4FY27	7.2%	6.8%	6.8%	6.8%	0.0%	4.7%	5.4%	5.5%	5.7%	0.2%
FY27	6.9%	6.6%	6.7%	7.1%	0.4%	4.6%	5.1%	5.0%	5.2%	0.2%
Q1FY28	-	-	7.3%	7.1%	-0.2%	-	-	5.3%	5.6%	0.3%
FY28	-	-	-	-	-	-	-	-	-	-

In summary, the RBI has adopted a hawkish but measured policy approach, delivering its first 25 bps rate hike in 44 months and moving the stance from neutral to calibrated tightening. The decision signals that rate cuts are off the table in the near term but does not imply a predetermined or aggressive hiking cycle. In our view, the Repo rate could rise by a further 50 bps to 6.00% in this cycle, although additional tightening would require a renewed deterioration in the inflation outlook or a materially higher global-rate environment. In parallel, the RBI is likely to continue actively managing surplus liquidity while monitoring the impact of policy on growth and credit conditions.

Description/inference of the Quantitative/Risk Measures

Sr. No.	Quantitative Measures/Risk Measures	Brief description/ Inference of the Quantitative measure
1	Standard Deviation	Statistical measurement that quantifies the average amount of variation or dispersion in a set of data values relative to their mean
2	Beta	Beta measures how much an investment's price moves relative to the overall stock market.
3	Sharpe Ratio	The Sharpe ratio measures the excess return of an investment per unit of its risk or volatility
4	R2	Statistical measure that shows the proportion of variance in a dependent variable that is explained by an independent variable in a regression model
5	Tracking Error	Tracking error is the measure of how much an investment portfolio's returns deviate from its benchmark index over time
6	Tracking Difference	Tracking Difference is the annualized difference of daily returns between the index and the NAV of the Index Fund.
7	Information Ratio	The Information Ratio measures a portfolio manager's ability to generate excess returns relative to a benchmark per unit of additional risk taken

Description/inference of the Quantitative/Risk Measures

Sr. No.	Quantitative Measures/Risk Measures	Brief description/ Inference of the Quantitative measure
1	Standard Deviation	Statistical measurement that quantifies the average amount of variation or dispersion in a set of data values relative to their mean
2	Beta	Beta measures how much an investment's price moves relative to the overall stock market.
3	Sharpe Ratio	The Sharpe ratio measures the excess return of an investment per unit of its risk or volatility
4	R2	Statistical measure that shows the proportion of variance in a dependent variable that is explained by an independent variable in a regression model
5	Tracking Error	Tracking error is the measure of how much an investment portfolio's returns deviate from its benchmark index over time
6	Tracking Difference	Tracking Difference is the annualized difference of daily returns between the index and the NAV of the Index Fund.
7	Information Ratio	The Information Ratio measures a portfolio manager's ability to generate excess returns relative to a benchmark per unit of additional risk taken

Description/inference of the Quantitative/Risk Measures

Sr. No.	Quantitative Measures/Risk Measures	Brief description/ Inference of the Quantitative measure
1	Standard Deviation	Statistical measurement that quantifies the average amount of variation or dispersion in a set of data values relative to their mean
2	Beta	Beta measures how much an investment's price moves relative to the overall stock market.
3	Sharpe Ratio	The Sharpe ratio measures the excess return of an investment per unit of its risk or volatility
4	R2	Statistical measure that shows the proportion of variance in a dependent variable that is explained by an independent variable in a regression model
5	Tracking Error	Tracking error is the measure of how much an investment portfolio's returns deviate from its benchmark index over time
6	Tracking Difference	Tracking Difference is the annualized difference of daily returns between the index and the NAV of the Index Fund.
7	Information Ratio	The Information Ratio measures a portfolio manager's ability to generate excess returns relative to a benchmark per unit of additional risk taken

Potential Risk Class			
Credit Risk →	Relatively Low (Class A)	Moderate (Class B)	Relatively High (Class C)
Interest Rate Risk ↓			
Relatively Low (Class I)	A-I		
Moderate (Class II)			
Relatively High (Class III)			

A relatively high interest rate risk and relatively low credit risk.

Potential Risk Class ('PRC') matrix indicates the maximum interest rate risk (measured by Macaulay Duration of the scheme) and maximum credit risk (measured by Credit Risk Value of the scheme) the fund manager can take in the scheme. PRC matrix classification is done in accordance with and subject to the methodology/guidelines prescribed by SEBI to help investors take informed decision based on the maximum interest rate risk and maximum credit risk the fund manager can take in the scheme, as depicted in the PRC matrix.

As per clause 7.22 of the SEBI Master Circular for Mutual Funds dated March 20, 2026, the benchmark has been classified as Tier 1 benchmark

Type of Scheme:	An open ended Liquid Scheme. Relatively Low interest rate risk and moderate credit risk.
Product labelling:	This product is suitable for investors who are seeking*: - Overnight liquidity over short term - Investment in Money Market Instruments *Investors should consult their financial advisers if in doubt about whether the product is suitable for them.

PRC Matrix

Potential Risk Class			
Credit Risk →	Relatively Low (Class A)	Moderate (Class B)	Relatively High (Class C)
Interest Rate Risk ↓			
Relatively Low (Class I)		B-I	
Moderate (Class II)			
Relatively High (Class III)			

A relatively high interest rate risk and relatively low credit risk.

Potential Risk Class ('PRC') matrix indicates the maximum interest rate risk (measured by Macaulay Duration of the scheme) and maximum credit risk (measured by Credit Risk Value of the scheme) the fund manager can take in the scheme. PRC matrix classification is done in accordance with and subject to the methodology/guidelines prescribed by SEBI to help investors take informed decision based on the maximum interest rate risk and maximum credit risk the fund manager can take in the scheme, as depicted in the PRC matrix.

Type of Scheme:	An open ended debt scheme investing in money market instruments. Relatively low interest rate risk and moderate credit risk.
Product labelling:	This product is suitable for investors who are seeking*: • Generation of regular income over short to medium term • Investment in money market instruments *Investors should consult their financial advisers if in doubt about whether the product is suitable for them.

Rating Profile

PRC Matrix

Potential Risk Class			
Credit Risk →	Relatively Low (Class A)	Moderate (Class B)	Relatively High (Class C)
Interest Rate Risk ↓			
Relatively Low (Class I)		B-I	
Moderate (Class II)			
Relatively High (Class III)			

A relatively high interest rate risk and relatively low credit risk.

Potential Risk Class ('PRC') matrix indicates the maximum interest rate risk (measured by Macaulay Duration of the scheme) and maximum credit risk (measured by Credit Risk Value of the scheme) the fund manager can take in the scheme. PRC matrix classification is done in accordance with and subject to the methodology/guidelines prescribed by SEBI to help investors take informed decision based on the maximum interest rate risk and maximum credit risk the fund manager can take in the scheme, as depicted in the PRC matrix.

As per clause 7.22 of the SEBI Master Circular for Mutual Funds dated March 20, 2026, the benchmark has been classified as Tier 1 benchmark

Type of Scheme:	An open ended debt scheme investing in instruments such that the Macaulay duration of the portfolio is between 6 months to 12 months. A relatively low interest rate risk and moderate credit risk.
Product labelling:	This product is suitable for investors who are seeking*: - Liquidity over short term - Investment in Debt / Money Market Instruments such that the Macaulay[^] duration of the portfolio is between 6 months to 12 months. *Investors should consult their financial advisers if in doubt about whether the product is suitable for them.

Description/inference of the Quantitative/Risk Measures

Sr. No.	Quantitative Measures/Risk Measures	Brief description/ Inference of the Quantitative measure
1	Standard Deviation	Statistical measurement that quantifies the average amount of variation or dispersion in a set of data values relative to their mean
2	Beta	Beta measures how much an investment's price moves relative to the overall stock market.
3	Sharpe Ratio	The Sharpe ratio measures the excess return of an investment per unit of its risk or volatility
4	R2	Statistical measure that shows the proportion of variance in a dependent variable that is explained by an independent variable in a regression model
5	Tracking Error	Tracking error is the measure of how much an investment portfolio's returns deviate from its benchmark index over time
6	Tracking Difference	Tracking Difference is the annualized difference of daily returns between the index and the NAV of the Index Fund.
7	Information Ratio	The Information Ratio measures a portfolio manager's ability to generate excess returns relative to a benchmark per unit of additional risk taken

Rating Profile

PRC Matrix

Potential Risk Class			
Credit Risk →	Relatively Low (Class A)	Moderate (Class B)	Relatively High (Class C)
Interest Rate Risk ↓			
Relatively Low (Class I)			
Moderate (Class II)	A-II		
Relatively High (Class III)			

A relatively high interest rate risk and relatively low credit risk.

Potential Risk Class ('PRC') matrix indicates the maximum interest rate risk (measured by Macaulay Duration of the scheme) and maximum credit risk (measured by Credit Risk Value of the scheme) the fund manager can take in the scheme. PRC matrix classification is done in accordance with and subject to the methodology/guidelines prescribed by SEBI to help investors take informed decision based on the maximum interest rate risk and maximum credit risk the fund manager can take in the scheme, as depicted in the PRC matrix.

Type of Scheme:	An open ended medium term debt scheme investing in instruments such that the Macaulay duration of the portfolio is between 3 years to 4 years. Relatively high interest rate risk and moderate credit risk.
Product labelling:	This product is suitable for investors who are seeking*: • Generation of income over medium term • Investment primarily in debt and money market securities *Investors should consult their financial advisers if in doubt about whether the product is suitable for them.

Rating Profile

PRC Matrix

Potential Risk Class			
Credit Risk →	Relatively Low (Class A)	Moderate (Class B)	Relatively High (Class C)
Interest Rate Risk ↓			
Relatively Low (Class I)			
Moderate (Class II)			
Relatively High (Class III)	A-III		

A relatively high interest rate risk and relatively low credit risk.

Potential Risk Class ('PRC') matrix indicates the maximum interest rate risk (measured by Macaulay Duration of the scheme) and maximum credit risk (measured by Credit Risk Value of the scheme) the fund manager can take in the scheme. PRC matrix classification is done in accordance with and subject to the methodology/guidelines prescribed by SEBI to help investors take informed decision based on the maximum interest rate risk and maximum credit risk the fund manager can take in the scheme, as depicted in the PRC matrix.

As per clause 7.22 of the SEBI Master Circular for Mutual Funds dated March 20, 2026, the benchmark has been classified as Tier 1 benchmark

Type of Scheme:	An open ended dynamic debt scheme investing across duration. A relatively high interest rate risk and relatively low credit risk.
Product labelling:	This product is suitable for investors who are seeking*: • Generation of reasonable returns over medium to long term • Investment in Fixed Income Securities *Investors should consult their financial advisers if in doubt about whether the product is suitable for them.

Rating Profile

PRC Matrix

Potential Risk Class			
Credit Risk →	Relatively Low (Class A)	Moderate (Class B)	Relatively High (Class C)
Interest Rate Risk ↓			
Relatively Low (Class I)			
Moderate (Class II)			
Relatively High (Class III)	A-III		

A relatively high interest rate risk and relatively low credit risk.

Potential Risk Class ('PRC') matrix indicates the maximum interest rate risk (measured by Macaulay Duration of the scheme) and maximum credit risk (measured by Credit Risk Value of the scheme) the fund manager can take in the scheme. PRC matrix classification is done in accordance with and subject to the methodology/guidelines prescribed by SEBI to help investors take informed decision based on the maximum interest rate risk and maximum credit risk the fund manager can take in the scheme, as depicted in the PRC matrix.

As per clause 7.22 of the SEBI Master Circular for Mutual Funds dated March 20, 2026, the benchmark has been classified as Tier 1 benchmark

Type of Scheme:	An open ended debt scheme predominantly investing in debt instruments of banks, public sector undertakings, public financial institutions and municipal bonds. A relatively high interest rate risk and relatively low credit risk.
Product labelling:	This product is suitable for investors who are seeking*: • Generation of reasonable returns and liquidity over short term. • Investment predominantly in securities issued by Banks, Public Sector Undertakings and Public Financial Institutions and municipal corporations in India. *Investors should consult their financial advisers if in doubt about whether the product is suitable for them.

Rating Profile

PRC Matrix

Potential Risk Class			
Credit Risk →	Relatively Low (Class A)	Moderate (Class B)	Relatively High (Class C)
Interest Rate Risk ↓			
Relatively Low (Class I)			
Moderate (Class II)			
Relatively High (Class III)			C-III

A relatively high interest rate risk and relatively low credit risk.

Potential Risk Class ('PRC') matrix indicates the maximum interest rate risk (measured by Macaulay Duration of the scheme) and maximum credit risk (measured by Credit Risk Value of the scheme) the fund manager can take in the scheme. PRC matrix classification is done in accordance with and subject to the methodology/guidelines prescribed by SEBI to help investors take informed decision based on the maximum interest rate risk and maximum credit risk the fund manager can take in the scheme, as depicted in the PRC matrix.

Type of Scheme:	An open ended debt scheme investing in government securities - across maturity. A relatively high interest rate risk and relatively low credit risk.
Product labelling:	This product is suitable for investors who are seeking*: • Generation of returns over medium to long term • Investment in Government Securities *Investors should consult their financial advisers if in doubt about whether the product is suitable for them.

Rating Profile

PRC Matrix

Potential Risk Class			
Credit Risk →	Relatively Low (Class A)	Moderate (Class B)	Relatively High (Class C)
Interest Rate Risk ↓			
Relatively Low (Class I)			
Moderate (Class II)			
Relatively High (Class III)	A-III		

A relatively high interest rate risk and relatively low credit risk.

Potential Risk Class ('PRC') matrix indicates the maximum interest rate risk (measured by Macaulay Duration of the scheme) and maximum credit risk (measured by Credit Risk Value of the scheme) the fund manager can take in the scheme. PRC matrix classification is done in accordance with and subject to the methodology/guidelines prescribed by SEBI to help investors take informed decision based on the maximum interest rate risk and maximum credit risk the fund manager can take in the scheme, as depicted in the PRC matrix.

As per clause 7.22 of the SEBI Master Circular for Mutual Funds dated March 20, 2026, the benchmark has been classified as Tier 1 benchmark

Type of Scheme:	An open ended Target Maturity Index Fund tracking CRISIL-IBX Gilt Index - June 2027. A Relatively high interest rate risk and relatively low credit risk.
Product labelling:	This product is suitable for investors who are seeking*: - Income over target maturity period. - Investments in Government Securities and Tbills *Investors should consult their financial advisers if in doubt about whether the product is suitable for them.

***HSBC Large Cap Fund:** The launch date of the Nifty 100 TRI is Jan 01, 2003 whereas the inception date of the scheme is Dec 10, 2002. The corresponding benchmark returns since inception of the scheme not available. (niftyindices.com)

***HSBC Corporate Bond Fund:** The launch date of the NIFTY Corporate Bond Index A-II is Sep 03, 2001 and the same for CRISIL 10 year Gilt Index is September 01, 2001 whereas the inception date of the scheme is Mar 31, 1997. The corresponding benchmark returns since inception of the scheme not available. (niftyindices.com)

***HSBC Gilt Fund:** The launch date of the NIFTY All Duration G-Sec Index is Sep 03, 2001 and the same for CRISIL 10 year Gilt Index is September 01, 2001 whereas the inception date of the scheme is Mar 29, 2000. The corresponding benchmark returns since inception of the scheme not available. (niftyindices.com)

***HSBC Liquid Fund:** Since there was no continuous NAV history available for the surviving Plan of HSBC Liquid Fund prior to May 19, 2011, returns since the said date have been considered for calculating Since Inception performance. The inception date of HSBC Liquid Fund however is December 04, 2002.

***HSBC Midcap Fund:** The launch date of the Nifty Midcap 150 TRI is Apr 01, 2005 whereas the inception date of the scheme is Aug 09, 2004. The corresponding benchmark returns since inception of the scheme not available. (niftyindices.com)

Since inception returns are to be provided since the date of allotment of units.

Additional benchmark as per clause 14.2.4. of SEBI Master Circular no. HO/24/13/11(1)2026-IMD-POD-1/I/7602/2026 dated March 20, 2026.

IDCW are assumed to be reinvested and Bonus is adjusted.

The performance details provided herein are of Regular as well as Direct Plan - Growth Option. Returns on ₹10,000 are point-to-point returns for the specific time period, invested at the start of the period. The returns for the respective periods are provided as on last available NAV of September 2026 for the respective schemes. Returns for 1 year and Above are Compounded Annualized. Returns for less than 1 year is Simple Annualized. Load is not taken into consideration for computation of performance. Different plans shall have a different expense structure. The expenses of the Direct Plan under the Scheme will be lower to the extent of the distribution expenses / commission charged to the Regular Plan. Considering the varying maturities of the close ended schemes, the performance of close-ended schemes is not provided as it is strictly not comparable with that of open-ended schemes.

⁴Post merger performance of the surviving scheme, arising out of merger of schemes with similar features, is computed as per the provisions of Clause 14.3 of SEBI Master Circular No- HO/24/13/11(1)2026-IMD-POD-1/I/7602/2026 dated March 20, 2026, using the weighted average performance of both transferor and transferee schemes. In other cases, performance is computed using the Applicable NAV of the surviving/continuing schemes. ~ Face value Rs 10 and ~~~ Face value Rs 1000
