I. Introduction

RISK FACTORS

A. Standard Risk Factors

- Mutual Fund investments are subject to market risks, read all scheme related documents carefully.
- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, price risk, default risk including the possible loss of principal.
- Mutual Funds and securities investments are subject to market risks and there is no assurance or guarantee that the objectives of the Scheme will be achieved.
- As the price / value / interest rates of the securities in which the Scheme invests fluctuate, the value of your investment in the Scheme may go up or down.
- Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the Scheme.
- L&T FMP – VII (March 381D A) does not in any manner indicate either the quality of the Scheme/ Plan or its future prospects and returns; and is only the name of the Scheme.
- The Sponsor is not responsible or liable for any loss resulting from the operation of the Scheme beyond initial contribution of Rs. 1 lakh made by it towards setting up of the Fund.
- The Scheme does not provide guarantee or assured return to the unitholders.

Scheme Specific Risk Factors:

Apart from the standard risk factors mentioned above, the investors are also requested to note following risks:

- The Scheme may not be able to invest in the suitable securities falling within its investment parameters leading the Scheme to hold short term deposits of scheduled commercial banks till the monies are deployed as per the investment objective of the Scheme.
- As the Scheme propose to invest and hold the securities till maturity, any default/delay by the Investee Company in honouring the securities on redemption may lead to delay and/or erosion in the maturity value to the unitholders.
- Absence of Prior Active Market: Although Scheme/ Plan described in this Scheme Information Document are to be listed on the Exchange, there can be no assurance that an active secondary market will develop or be maintained. Consequently, the Fund may quote below its face value / NAV.
- Lack of Market Liquidity: Trading in the units of L&T FMP – VII (March 381D A) on the Exchange may be halted because of market conditions or for reasons that in view of Exchange Authorities or SEBI, trading in units of the Scheme is not advisable. In addition, trading in units of the Scheme is subject to trading halts caused by extraordinary market volatility and pursuant to Exchange and SEBI ‘circuit filter’ rules. There can be no assurance that the requirements of Exchange necessary to maintain the listing of units of the Scheme/ Plan will continue to be met or will remain unchanged.
- Listing of the units of the Scheme/ Plan does not necessarily guarantee their liquidity and there can be no assurance that an active secondary market for the units will develop or be maintained. The NAV of the Scheme will fluctuate with changes in the market value of the Scheme’s holdings. The trading prices of the said units will fluctuate in accordance with the changes in their NAV as well as market supply and demand for the units.
- Regulatory Risk: Any changes in trading regulations by the Stock Exchange(s) or SEBI may affect the ability of market maker to arbitrage resulting into wider premium/ discount to NAV.
- Concentration Risk: As the Debt market in India is not so matured, there is a possibility of having high exposures to single issuers. Although these exposures would be within the regulatory limits prescribed by

SEBI, however they could pose additional risk to investors. Further, the investors could also be exposed to group level risks resulting from an aggregation of issuers associated with the same group.

Other Scheme Specific Risks:

1. **Returns:** Investors in the Scheme are not being offered any guaranteed returns.
2. **Performance risk:** Scheme's performance can decrease or increase, depending on a variety of factors, which may affect the values and income generated by a Scheme's portfolio of securities. The returns of a Scheme's investments are based on the current yields of the securities, which may be affected generally by factors affecting capital markets such as price and volume, volatility in the stock markets, interest rates, currency exchange rates, foreign investment, changes in government and Reserve Bank of India policy, taxation, political, economic or other developments and closure of the stock exchanges. Investors should understand that the investment pattern indicated for the Scheme, inline with prevailing market conditions, is only a hypothetical example as all investments involve risk and there can be no assurance that the Scheme's investment objective will be attained nor will the Scheme be in a position to maintain the model percentage of investment pattern/composition particularly under exceptional circumstances so that the interest of the unitholders are protected. A change in the prevailing rates of interest is likely to affect the value of the Scheme's investments and thus the value of the Scheme's Units. The value of money market instruments held by the Scheme generally will vary inversely with the changes in prevailing interest rates. The fund, while investing in fixed-income instruments like debt, etc., shall consider and evaluate the risk of an issuer's ability to meet principal and interest payments (credit risk) and also the price volatility due to such factors as interest sensitivity, market perception or the creditworthiness of the issuer and general market liquidity (market risk).
3. **Liquidity & Settlement risk:** Investors may note that AMC/Fund Manager's investment decisions may not be always profitable. The Scheme will invest in debt securities and money market instruments. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of these investments. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. By the same rationale, the inability to sell securities held in the Scheme's portfolio due to the absence of a well developed and liquid secondary market would result, at times, in potential losses to the Scheme, in case of a subsequent decline in the value of securities held in the Scheme's portfolio.
4. **Co-mingling risk:** This risk arises on account of time lag between pool collections and investor payouts, during which the Collection Agent continues to hold the pool collections. The risk of loss of cash flows on account of commingling depends on the credit standing of the issuer.
5. As the Scheme will invest in debt and money market instruments; it may also have the following risk:
 - (i) **Interest rate Risk:** As interest rates increase or decline, the prices of individual securities will decrease or increase thus affecting the NAV. Interest rate movements in the Indian debt markets can be volatile leading to price movements resulting into consequential movements in NAV.
 - (ii) **Reinvestment Risk:** This risk refers to the interest rate levels at which coupons or maturity proceeds from securities can be reinvested. If interest rates fall these cash flows may be reinvested at lower rates.
 - (iii) Different types of securities in which the scheme would invest as given in the Scheme information document carry different levels and types of risk. Accordingly, the scheme's risk may increase or decrease depending upon its investment pattern e.g. corporate bonds carries higher level of risk than Government securities. Further, even among corporate bonds, bonds which are AAA rated are comparatively less risky than bonds which are AA rated.
6. **Political Risk:** Whereas the Indian market was formerly restrictive, a process of deregulation has been taking place over recent years. This process has involved the removal of trade barriers and other protectionist measures, which could adversely affect the value of investments. It is possible that future

changes in the Indian political situation, including political, social, or economic instability, diplomatic developments and changes in laws or regulations could have an effect on the value of investments. Expropriation, confiscatory taxation, or other relevant developments could also affect the value of investments.

7. Risk Associated with Derivatives Transaction:

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

As and when the Scheme trades in the derivatives market there are risk factors and issues concerning the use of derivatives that Investors should understand. Derivative products are specialized instruments that require investment techniques and risk analyses different from those associated with stocks. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is the possibility that a loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the “counter party”) to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mis-pricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.

8. Short Selling Risk:

The risk associated with upward movement in market price of security sold short may result in loss. The losses on short position may be unlimited as there is no upper limit on rise in price of a security.

9. **Risk of Rating Migration:** It may be noted that the price of a rated security would be impacted with the change in rating and hence, there is risk associated with such migration.

Declaration on indicative portfolio and indicative yield

- a) Mutual Fund/ AMC/ its empanelled Distributors has not given and shall not give any indicative portfolio and/ or indicative yield in any communication, in any manner whatsoever and
- b) Investors are advised not to rely on any communication regarding indicative portfolio and/ or indicative yield with regards to the Scheme.

Measures to mitigate risks associated with the Scheme/ Plan

- a) The interest rate risk is minimized as the Scheme/ Plan will invest in debt and money market instruments maturing on or before the maturity of the Scheme/ Plan.
- b) The AMC has incorporated adequate safeguards to manage risk in the portfolio construction process. Accordingly, liquidity risk is minimized as the Scheme/ Plan would focus on good quality papers at the time of portfolio construction.
- c) Further, the fund management team would endeavour to minimize the credit risk of the Scheme/ Plan by performing detailed credit analysis before purchase of any debt and money market instrument. The Scheme’s investments would be reviewed on regular basis by the Fund Manager.

B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME/ PLAN

The Scheme/ Plan shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme/ Plan. These conditions will be complied with, immediately after the close of the NFO itself i.e. at the time of allotment. In case of non-fulfilment with the condition of minimum 20 investors, the Scheme/ Plan shall be wound up in accordance with Regulation 39(2) (c) of SEBI (MF) Regulations, as amended from time to time automatically without any reference from SEBI. In case of non-fulfilment with the condition of 25% holding by a single investor on the date of allotment, the applications to the extent of exposure in excess of the stipulated 25% limit would be liable to be rejected and the allotment would be effective only to the extent of 25% of the corpus collected. Consequently, such exposure over 25% limits will lead to refund within 5 business days of the close of the New Fund Offer.

All investments made by the Scheme will be made in accordance with SEBI (Mutual Funds) Regulations, 1996, as amended from time to time

- The overall portfolio structuring would aim at controlling risk at moderate level. Issuer specific risk will be minimised by investing only in those companies that have been thoroughly researched in-house. - The AMC will follow a structured investment process in order to identify the best securities for investment and has developed an internal research framework for consistently examining all securities.

Risk Control

Credit Evaluation Policy:

Investors are requested to note the following Credit Evaluation Policy shall be followed by the AMC:

The AMC has a dedicated Credit Analyst for conducting the due-diligence and thorough analysis of each company.

Investments in fixed income instruments are made on the basis of an internal approved list of companies/ issuers. The list is usually reviewed on a half yearly basis with respect to their financial health. The Companies/ Issuers which already form part of the portfolio are reviewed on a regular basis as their financial results are published. The ratings of companies/ issuers in this internal approved list are under a continuous watch by the Credit Analyst. Any upgrades or downgrades are immediately informed to the Investment Team and action (if any) is taken immediately.

For inclusion of a new company/ issuer in an internal approved list, a detailed process is followed by the AMC. The Credit Analyst prepares a detailed report on the company/ issuer taking into account both qualitative and quantitative parameters. The report is prepared after carefully studying the company financial data, its track record, its sponsor/ parent in terms of their financials, any defaults to its creditors etc. The Analyst/ Fund Manager may also meet the management of the company/ issuer. In addition to this, the sector in which the company/ issuer operates is also studied. The report from the Credit Analyst is an independent opinion based on the credit risk analysis. Thereafter, this report in consultation with the Chief Executive Officer of the AMC is presented to the Investment Committee of the AMC comprising of amongst others the Fund Managers and Analysts to discuss the companies/ issuers in which an exposure might be considered. Every company/ issuer is subjected to a thorough analysis by the Investment Committee and only after approval it forms a part of internal approved list of companies/ issuers.

The AMC would ensure that appropriate risk mitigating measures are in place throughout the tenure of portfolio of the Scheme i.e., right from the beginning of the portfolio construction phase. It involves all tenets of independent credit risk analysis, adequate diversification of the portfolio and maturity of

securities being in line with the maturity of the portfolio. In order to ensure adequate independent risk management, the AMC shall endeavour independence through credit risk analysis of all the intended credits.

Debt Market Overview

The Indian Debt Market has grown in size substantially over the years. The Reserve Bank of India has been taking steps to make the Indian Debt Market efficient and vibrant. Broadly, the debt market is divided in two parts viz. the Money Market and the Debt market. Money market instruments have a tenor of less than one year while debt market instruments have a tenor of more than one year. Money market instruments are typically commercial paper, certificates of deposit, treasury bills, trade bills, repos, interbank call deposit receipts, CBLO etc. Debt market comprises typically of securities issued by Governments (Central and State), Banks, Financial Institutions, and Companies in the private and public sector, Corporations, Statutory Bodies etc.

The trading in Government securities and Treasury Bills is mainly done through the OMS (Order Matching System) introduced by CCIL and RBI’s NDS PDO. Other debt securities like corporate bonds and money market instruments are mainly traded over the telephone directly with counterparties or through brokers. The National Stock Exchange of India Limited has a separate trading platform called the Wholesale Debt Market segment where trades put through member brokers are reported. BSE (Bombay Stock Exchange) also has a similar platform. The debt market is very liquid with the daily trades in the region of Rs. 2500 crore.

CCIL (Clearing Corporation of India) has also set up platform for lending and borrowing through the CBLO dealing system and CROMS (Repo Order Matching system). These dealing systems have been fairly successful and in addition to the call money market account for bulk of the overnight lending and borrowing activities of market participants for short term surpluses.

Promoted by major banks and financial institutions, The Clearing Corporation of India Ltd. (CCIL) was incorporated on April 30, 2001. The CCIL guarantees the settlement of all trades executed through NDS. The clearing and settlement risks viz., Counter party Credit Risk and Operational Risk are mitigated by CCIL thereby facilitating a smooth settlement process.

G) HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

The Benchmark Index for the Scheme would be CRISIL Short Term Bond Fund Index. The Scheme would be investing primarily in money market instruments and short term debt instruments. These instruments are considered to be relatively safer with low interest rate and credit risk as compared to medium and long term debt instruments. CRISIL Short term Bond Fund Index tracks returns on a composite portfolio that tracks various short term money market indices like the Call Index and CP index. This benchmark could be therefore an appropriate and realistic indicator for a Mutual Fund Scheme which seeks to invest in all the instruments mentioned above in order to maximize returns at a particular level of risk. Hence, CRISIL Short term Bond Fund Index would be an appropriate benchmark index for the Scheme.

The AMC and the Trustee may mutually agree to change the benchmark index or select an additional benchmark index after recording reasons for such change and by following required regulatory process and reserves the right to change the benchmark for evaluation of performance of the Scheme from time to time in conformity with the investment objectives and appropriateness of the benchmark subject to SEBI (MF) Regulations, and other prevailing guidelines, if any.

Trading in Derivatives

In accordance with the SEBI Circular Cir/ IMD/ DF/ 11/ 2010 dated August 18, 2010, investments in derivatives shall adhere to the following restrictions:

Exposure Limits:

1. The total exposure in derivatives, either exchange traded or OTC shall not exceed 50% of Net Assets as permitted by SEBI Regulations.
2. The cumulative gross exposure through Debt and Derivative positions shall not exceed 100% of net assets of the Scheme.
3. Mutual Funds shall not write options or purchase instruments with embedded written options.
4. The total exposure related to option premium paid must not exceed 20% of the net assets of the Scheme.
5. Cash or cash equivalents with residual maturity of less than 91 days may be treated as not creating any exposure.
6. Exposure due to hedging positions may not be included in the above mentioned limits subject to the following
 - a) Hedging positions are the derivative positions that reduce possible losses on an existing position in securities and till the existing position remains.
 - b) Hedging positions cannot be taken for existing derivative positions. Exposure due to such positions shall have to be added and treated under limits mentioned in Point 2 above.
 - c) Any derivative instrument used to hedge has the same underlying security as the existing position being hedged.
 - d) The quantity of underlying associated with the derivative position taken for hedging purposes does not exceed the quantity of the existing position against which hedge has been taken.
7. Mutual Funds may enter into plain vanilla interest rate swaps for hedging purposes. The counter party in such transactions has to be an entity recognized as a market maker by RBI. Further, the value of the notional principal in such cases must not exceed the value of respective existing assets being hedged by the Scheme. Exposure to a single counterparty in such transactions should not exceed 10% of the net assets of the Scheme.

The use of derivative instruments is explained below by an example of interest rate swaps.

Interest rate swaps act as a hedge for short-term securities, with the minimum credit risk and cost. The swap agreement is a two-part agreement in which both the parties agree to exchange cash flows based on a specified formula and on specified dates. An Interest Rate Swap (IRS) is a contract between two counter parties to exchange interest payments on specified date(s) over a specified period.

For example one party would pay the other a fixed rate of interest in return for a floating rate. The fixed rate would be known and would remain unchanged for the tenor of the swap while the floating rate will be unknown until after the passage of the reset date. The floating rate is usually a variable benchmark rate like the MIBOR, Bank PLR etc. In the case of IRS the principal amount is not exchanged. The net interest amounts are settled between the counter parties on the settlement date(s) of the contract.

An example of an overnight interest swap is as below:

A mutual fund has inflows of Rs.10 crores for 7 days. It intends to deploy the money in the call money market. The call money market is volatile and the fund wants to minimise risk. The fund therefore enters into an interest rate swap wherein it swaps the floating rate (i.e. the daily call money interest) and would receive a fixed rate of say 8%

Details of the swap:

Principal Rs.10 crore
 Start date 3rd January 2012
 Maturity date 10th January, 2012
 Duration of swap 7 days
 Fixed rate 8%

The call rates over the next 7 days as well as the accruals are as below:

Date	Day	Call Rate	Opening Principal	Interest	Closing Principal
3rd January	1	7%	10,00,00,000/-	19,178/-	10,00,19,178/-
4th January	2	8%	10,00,19,178/-	21,922/-	10,00,41,100/-
5 th January	3	6%	10,00,41,100/-	16,445/-	10,00,57,545/-
6 th January	4	6%	10,00,57,545/-	16,448/-	10,00,73,993/-
7 th January	5	9%	10,00,73,993/-	24,675/-	10,00,98,668/-
8 th January	6	7%	10,00,98,668/-	19,197/-	10,01,17,865/-
9 th January	7	7%	10,01,17,865/-	19,201/-	10,01,37,066/-

Interest on floating leg Rs. 1,37,066/-

Interest on fixed leg Rs. 1,53,424/-

Net interest receivable by the fund Rs. 16,358/-

Please note that the above example is hypothetical in nature and the figures etc. are assumed. The transaction costs, if any, associated with such trades may vary from case to case. Actual returns will vary depending on various market-related factors. Such instruments would also carry certain risks like basis point risk, counter party risk etc.

The total exposure to derivative instruments shall not exceed such limits, if any, as may be prescribed by the relevant authorities from time to time.

8. Exposure due to derivative positions taken for hedging purposes in excess of the underlying position against which the hedging position has been taken, shall be treated under the limits mentioned in point 2.
9. Each position taken in derivatives shall have an associated exposure as defined under. Exposure is the maximum possible loss that may occur on a position. However, certain derivative positions may theoretically have unlimited possible loss. Exposure in derivative positions shall be computed as follows:

Position	Exposure
Long Future	Futures Price * Lot Size * Number of Contracts
Short Future	Futures Price * Lot Size * Number of Contracts
Option bought	Option Premium Paid * Lot Size * Number of Contracts

**Position Limits for Mutual Funds
(i.e aggregate of all Schemes)**

Additional position limit for hedging

Hedging Limits

Hedge against a fall in share prices(short futures, short calls and long puts)	Short positions shall not exceed (in notional value) the value of the Mutual Fund's holding of stocks
Hedge to protect against a rise in share prices (long futures, long calls and short puts)	Long position shall not exceed (in notional value) the value of the Mutual Fund's holding of cash, g-sec, T bills and similar instruments.

Strategies for Debt Derivatives:

1. **Bond – OIS Swap:** Under this strategy, the fund manager pays fixed rate on Overnight Indexed Swap (OIS) against an underlying bond of a similar or greater tenor and receives Mumbai Inter-Bank Offer Rate (MIBOR). This is essentially done for hedging interest rate risk or for rebalancing portfolio allocation to fixed and floating rate bonds. Effectively, through this trade the fund manager is able to convert a fixed rate bond into a floating rate MIBOR linked instrument. The trade has exposure to 'basis movement' - the relative movement of bond versus OIS.
2. **Receive OIS:** Here the fund manager receives fixed rate on OIS against either cash or a floating rate bond of a similar or greater tenor, and pays MIBOR. The objective is to rebalance portfolio in favor of fixed rate exposure if the view is that overnight rates will fall.
3. **Buy Interest Rate Futures:** To hedge an underlying exposure of government securities or corporate bonds, the fund manager may sell similar tenor bonds under Interest Rate futures contracts if he has a bearish view. When rates rise, the market value of the gilt/ bonds will go down but the market value of the futures contract will go up and hence the overall loss could be minimized.
4. **Interest Rate Swaps (IRS):** All swaps are financial contracts, which involve exchange (swap) of a set of payments owned by one party for another set of payments owned by another party, usually through an intermediary (market maker). An IRS can be defined as a contract between two parties (Counter Parties) to exchange, on particular dates in the future, one series of cash flows, (fixed interest) for another series of cashflows (variable or floating interest) in the same currency and on the same principal for an agreed period of time. The exchange of cashflows need not occur on the same date.

Bond markets in India are not very liquid. Investors run the risk of illiquidity in such markets. Investing for short-term periods for liquidity purposes has its own risks. Investors can benefit if the Fund remains in call market for the liquidity and at the same time take advantage of fixed rate by entering into a swap. It adds certainty to the returns without sacrificing liquidity.

6. **Forward Rate Agreements (FRA):** A FRA is an agreement between two counter parties to pay or to receive the difference between an agreed fixed rate (the FRA rate) and the interest rate prevailing on a stipulated future date, based on a notional amount, for an agreed period. In short, in a FRA, interest rate is fixed now for a future period. The special feature of FRAs is that the only payment is the difference between the FRA rate and the Reference rate and hence are single settlement contracts. As in the case of IRS, notional amounts are not exchanged. However, there is the possibility that a loss may be sustained by the portfolio as a result of the failure of another party to comply with the terms of the contract. To the extent that settlements of contracts are not guaranteed by an exchange or clearing corporation, hence, there is the risk of a counterparty to a deal defaulting in payment.
