Risk Profile of the Schemes	<p>Mutual Fund Units involve investment risks including the possible loss of principal. Please read the Scheme Information Document carefully for details on risk factors before investment.</p> <p>As per SEBI circular no. SEBI/IMD/CIR No.10/22701/03 dated December 12, 2003, the Scheme/plan (including the plans thereunder) should have a minimum of 20 Unit Holders and no single Unit Holder should account for more than 25% of the corpus of the Scheme/plan. The aforesaid conditions should be met in each calendar quarter on an average basis. In case of non-fulfilment with the first condition i.e. minimum of 20 investors in the scheme/plan, for each calendar quarter as specified by SEBI, the scheme/plan shall be wound up by following the guidelines prescribed by SEBI and Unit Holders' investment in such scheme/plan would be redeemed at the Applicable NAV. SEBI has further prescribed that if any investor breaches the 25% limit over a quarter, a rebalancing period of one month will be allowed to the investor and thereafter the investor who is in breach of the limit shall be given 15 days notice to redeem his exposure over the 25% limit. In the event of failure on part of the said investor to redeem the excess exposure, the excess holding will be automatically redeemed by the Fund following the guidelines prescribed by SEBI.</p> <p>Equity and equity related securities are volatile and prone to price fluctuations on a daily basis. The liquidity of investments made in the Scheme may be restricted by trading volumes and settlement periods. Settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases, due to settlement problems, could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme's portfolio would result at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme's portfolio.</p> <p>Investments in equity and equity related securities involve a degree of risks and investors should not invest in the Scheme unless they can afford to take the risk of losing their investment.</p> <p>Securities which are not quoted on the stock exchanges are inherently illiquid in nature and carry a larger liquidity risk in comparison with securities that are listed on the exchanges or offer other exit options to the investors, including put options.</p> <p>Investments in money market instruments would involve a moderate credit risk i.e. risk of an issuer's liability to meet the principal payments.</p> <p>Money market instruments may also be subject to price volatility due to factors such as changes in interest rates, general level of market liquidity and market perception of credit worthiness of the issuer of such instruments. The AMC endeavours to manage such risk by the use of inhouse credit analysis. The NAV of the Scheme's Units, to the extent that the Scheme is invested in money market instruments, will be affected by the changes in the level of interest rates. When interest rates in the market rise, the value of a portfolio of money market instruments can be expected to decline. The NAV will also be affected by Risks associated with investments made in derivatives. The NAV of the Scheme will also be affected by Risk Factors associated with scrip lending and investments in Foreign Securities.</p> <p>In addition to the factors that affect the values of securities, the NAV of Units of the Scheme will fluctuate with the movement in the broader fixed income, money market and derivatives market and may be influenced by factors influencing such markets in general including but not limited to economic conditions, changes in interest rates, price and volume volatility in the fixed income markets, changes in taxation, currency exchange rates, foreign investments, political, economic or other developments and closure of the stock exchanges. Further the investments made by the Scheme will also be affected by interest rate/price risk, credit risk or default risk, sovereign risk, liquidity risk, re-investment risk, settlement risk, risk associated with investment in derivatives and foreign securities.</p> <p>Risks Factors associated with transaction in Units through stock exchange(s)</p> <p>In respect of transaction in Units of the Scheme through BSE and/or NSE and/or ICEX, allotment and redemption of Units on any Business Day will depend upon the order processing/settlement by BSE and/or NSE and/or ICEX and their respective clearing corporations on which the Fund has no control.</p>																

Investment Strategy	<p>The Scheme being a thematic equity fund which will invest predominantly in equity and equity related securities with focus on riding business cycles through dynamic allocation between cyclical and defensive sectors and stocks at different stages of business cycles in the economy.</p> <p>Business cycles in an economy are typically characterized by the fluctuations in economic activity measured by real GDP growth and other macroeconomic variables. A business cycle is basically defined in terms of periods of expansion and contraction. During expansion, an economy experiences an increase in economic activity as evidenced by real GDP growth, industrial production, etc whereas during contraction, the pace of economic activity slows down. The business cycle is a critical determinant of equity sector performance over the intermediate term and the relative performance of equity market sectors typically tends to rotate as the overall economy shifts from one stage of the business cycle to the next, with different sectors assuming performance leadership in different economic phases. For example, during the expansionary phase in the domestic economy from FY 2004-FY 2008, most of the cyclical stocks such as those in capital goods and consumer durables sectors outperformed the stocks in the non-cyclical sectors. However, when the economic growth slowed down from FY 2009 to FY 2014, stocks in defensive sectors such as consumer staples and healthcare outperformed the cyclical stocks.</p> <p>The Scheme would aim to deploy the business cycles approach to investing by identifying such economic trends and investing in the sectors and stocks that are likely to outperform at any given stage of business cycle in the economy. For example, during period of expansion, the Scheme would aim to predominantly invest in stocks of companies in the cyclical sectors as they tend to outperform the broader market during expansionary phase. Similarly, during period of contraction the Scheme would look to invest in defensive sectors stocks or sectors that are less sensitive to changes in overall economic activity.</p> <p>The fund managers would combine a clear macro view with bottom-up stock selection approach for managing this Scheme. The selection of stocks at the primary level will be based on the stage of the domestic economic cycle. The fund managers could use various indicators such as corporate profit growth trends, inventory levels, credit growth, capacity utilization levels and other relevant factors to determine the stage of the economic cycle. Based on the views formed on the stage of the economic cycle, the fund managers would look to own stocks that they expect to outperform over the next few years. The stock selection would lay emphasis on company fundamentals, valuation, competitive positioning and management quality among other factors. The fund managers will favour companies that offer the best value relative to their respective long-term growth prospects, returns on capital and management quality. When assessing a company, the fund managers will focus on understanding how each of these factors will change over time.</p>
