2. Expected Benefits of the Proposed Transaction

Broadly, the Proposed Transaction is expected to result in the following benefits:

- a) L&T Mutual Fund is an established mutual fund in India with an AUM of approximately INR 72,322.38 crores for the month ended September 30, 2022. The Seller established its presence in the mutual funds industry through the acquisition of the mutual fund business of DBS Chola Mutual Fund in 2010 and Fidelity Mutual Fund in 2012. The Seller has demonstrated its ability to successfully integrate and grow acquired mutual fund portfolios. Since its acquisition of the mutual fund businesses of DBS Chola Mutual Fund and Fidelity Mutual Fund, the average AUM of L&T Mutual Fund has increased from approximately INR 2,520 crores (for the month of January 2010 for the erstwhile DBS Chola Mutual Fund) to approximately INR 72,322.38 crores for the month ended September 30, 2022. (Source: AMFI).
- b) The Proposed Transaction will help HSBC to increase foothold in the mutual fund industry in the near future and HSBC is committed to growth. The proposed sale of L&T Mutual Fund to HSBC Mutual Fund will increase the scale and resources of the entity and deliver a strong value proposition to all unitholders. The strength of the HSBC global brand and its strong track record in the area of investor care is expected to help enhance the investor experience of all unit holders.
- c) HSBC AMC has a long track record and has delivered reasonable return to its unitholders.
- d) The merger of HSBC MF Schemes and L&T MF Schemes would allow HSBC AMC and HSBC Trustees to avoid the existence of similar schemes in HSBC Mutual Fund and enable optimum utilization of resources and to present to the unitholders, a simplified range of schemes in the interest of the unitholders. It is in the interest of the unitholders that the HSBC Trustees and the board of directors of HSBC AMC have decided to merge some of their schemes with those of the schemes of L&T AMC or vice versa.

3. Proposal

We would like to inform you that as part of the Proposed Transaction:

9. Tax Implications of Merger of the Schemes

There should not be any income-tax implications due to the Merger of the Schemes (as described in paragraph 5 of this letter) in the hands of unitholders since merger/consolidation of mutual fund schemes is considered as a tax neutral event. Transfer of units upon consolidation of mutual fund schemes of two or more schemes of equity-oriented fund or two or more schemes of a mutual fund other than equity oriented fund in accordance with the MF Regulations is exempt from capital gains i.e., any transfer of units of consolidating scheme of a mutual fund, made in consideration of the allotment of the units of the consolidated scheme by the unitholder is not considered as "transfer" by virtue of the provisions of Section 47(xviii) of the Income-tax Act, 1961 (the "IT Act") and hence the gains on such transfer should not be chargeable to tax.

For any redemption/switch transactions post the Merger of the Schemes (as described in paragraph 5 of this letter), the following points are relevant for taxation (held as capital asset):

- For the purpose of classifying the units of consolidated scheme into long term or short term, the period of holding of units acquired in the consolidation of schemes of mutual fund shall include the period for which units in consolidating schemes were held by the unitholder in terms of the provisions of Section 2(42A) of the IT Act.
- Further, Section 49(2AD) of the IT Act provides that the cost of acquisition of the units acquired in the consolidated scheme of mutual fund (in consideration of allotment of units of consolidating scheme) shall be deemed to be the cost of acquisition of the units in the consolidating scheme of mutual fund.

However, redemption and/or switch of units from the HSBC Equity Hybrid Fund during the Exit Option Period shall be considered as redemption and will result in short term/long term capital gain/loss in the hands of the unitholders depending on the period of holding of the investment.

In case of NRI unitholders, TDS would be deducted in accordance with applicable tax laws for redemption/switch-out of units from the HSBC Equity Hybrid Fund during the Exit Option Period and same would be required to be borne by such unitholder only.

Securities Transaction Tax ("STT") on redemption/switch-out of units, if any, exercised during the Exit Option Period in HSBC Equity Hybrid Fund shall be borne by HSBC AMC.

Stamp duty shall not be levied on the units allotted under the Surviving Scheme, upon the Merger of the Schemes.

STT on extinguishment of units (if applicable) under the HSBC Equity Hybrid Fund and allotment under the Surviving Scheme upon the Merger of the Schemes (as described in paragraph 5 of this letter), would not be levied to the unitholders.

In view of the individual nature of tax consequences, unitholders are advised to consult the professional financial/tax advisors with regard to tax and other financial implications arising out of their participation in Merger of the Schemes.

I. Provisions related to covered call strategy

Covered call strategy is known as selling a call option on the shares which an investor holds. Under this strategy the investor owns the shares and has taken on the potential obligation to deliver the shares to the option buyer and accept the predetermined price as the price at which he sells the shares. For his willingness to do this, the investor receives the premium on the option.

Benefit of covered call strategy

Income Generation: Investment manager sees this strategy as income generation. When investment manager is under view that the price of a share will not move beyond certain price in certain time frame, his endeavour will be to generate income by selling call option on that stock.

Downside Hedging: Downside of the stock is protected to the extent of premium received under covered call strategy.

Risk Factors of covered call strategy

Volatility risk: Volatility risk arises when market is more volatile than the Fund Manager's estimation. The investment manager holds view of range bound market and the market volatility breaches these limits, thereby increasing risk to the portfolio. This risk is mitigated as we have covered with the stocks we hold.

Opportunity loss: Selling call option means investment manager are obligated to deliver the stock at a predetermined price. In case when the stock price moves above the predetermined price, the upside opportunity is lost on the stock, because we have sold call option.

Writing call options are highly specialized activities and entail higher than ordinary investment risks. In such investment strategy, the profits from call option writing is capped at the option premium, however the downside depends upon the increase in value of the underlying equity shares.

Restriction in Writing of Covered Call Options by Mutual Fund Schemes:

In terms of SEBI circular dated January 16, 2019, mutual funds have been permitted to write call options under a covered call strategy as prescribed below: Mutual Fund schemes (except Index Funds and ETFs) may write call options only under a covered call strategy for constituent stocks of NIFTY 50 and BSE SENSEX subject to the following:

- The total notional value (taking into account strike price as well as premium value) of call options written by a scheme shall not exceed 15% of the total market value of equity shares held in that scheme.
- The total number of shares underlying the call options written shall not exceed 30% of the unencumbered shares of a particular company held in the scheme. The unencumbered shares in a scheme shall mean shares that are not part of Securities Lending and Borrowing Mechanism (SLBM), margin or any other kind of encumbrances.
- At all points of time, the Mutual Fund scheme shall comply with the provisions at paragraphs (a) and (b) above. In case of any passive breach of the requirement at paragraph (a), the respective scheme shall have 7 trading days to rebalance the portfolio. During the rebalancing period, no additional call options can be written in the said scheme.
- In case a Mutual Fund scheme needs to sell securities on which a call option is written under a covered call strategy, it must ensure compliance with paragraphs (a) and (b) above while selling the securities.
- In no case, a scheme shall write a call option without holding the underlying equity shares. A call option can be written only on shares which are not hedged using other derivative contracts.
- The premium received i.e., the total gross exposure related to option premium paid and received must not exceed 20% of the net assets of the scheme.
- The exposure on account of the call option written under the covered call strategy shall not be considered in cumulative gross exposure of the Scheme for computing 100% of the net assets of the scheme.

- h. The call option written shall be marked to market daily and the respective gains or losses factored into the daily NAV of the respective scheme(s) until the position is closed or expired.

II. Provisions related to REITs & InvITs

A. Risk factors associated with investments in REITs & InvITs

Market Risk: REITs and InvITs Investments are volatile and subject to price fluctuations on a daily basis owing to the market conditions and factors impacting the underlying assets. AMC/Fund Manager's will do the necessary due diligence but actual market movements may be at variance with the anticipated trends.

Liquidity Risk: As the liquidity of the investments made by the Scheme(s) could, at times, be restricted by trading volumes, settlement periods, dissolution of the trust, potential delisting of units on the exchange etc., the time taken by the Mutual Fund for liquidating the investments in the scheme may be long in the event of immediate redemption requirement. Investment in such securities may lead to increase in the scheme portfolio risk. As these products are new to the market they are likely to be exposed to liquidity risk.

Reinvestment Risk: Investments in REITs & InvITs may carry reinvestment risk as there could be repatriation of funds by the Trusts in form of buyback of units or dividend pay-outs, interest payments etc. Depending upon the market conditions, interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. As a result, the proceeds may get invested at a lower rate.

Credit Risk: REITs & InvITs are likely to have volatile cash flows as the repayment dates would not necessarily be pre scheduled.

Regulatory/Legal Risk: REITs and InvITs being new asset classes, regulatory guidelines may be evolving in nature, which may impact the investments in REITs and InvITs.

B. Investment restrictions related to REITs & InvITs

A mutual fund may invest in the units of REITs and InvITs subject to the following:

- (a) No mutual fund under all its schemes shall own more than 10% of units issued by a single issuer of REIT and InvIT; and
- (b) A mutual fund scheme shall not invest –
 - i. more than 10% of its NAV in the units of REIT and InvIT; and
 - ii. more than 5% of its NAV in the units of REIT and InvIT issued by a single issuer.

Provided that the limits mentioned in sub-clauses (i) and (ii) above shall not be applicable for investments in case of index fund or sector or industry specific scheme pertaining to REIT and InvIT.

III. Risk associated with investing in Fixed Income instruments with Structured Obligations/Credit Enhancements

Structured Obligations ("SO") are complex financial instruments issued by entities intending to improve their financing profile with the help of non-conventional financial instruments. Credit Enhancement ("CE") rating is assigned by Credit Rating agencies to a debt security based on an identifiable credit enhancement for the security which could be in the form of letter of comfort, guarantee, shortfall undertaking etc., from another entity than the issuer, related or not related to the issuer. CE could additionally include pledging of equity shares listed on a stock exchange with a suitable haircut. Apart from standard risks related to debt instruments, these instruments are further exposed to the below risks:

Liquidity Risk: SO rated securities are often complex structures, with a variety of credit enhancements. Debt securities generally lack a well-developed secondary market in India, and due to the credit enhanced nature of CE securities as well as structured nature of SO securities, the liquidity in the market for these instruments is shallow compared to similar rated conventional debt instruments. Hence, lower liquidity of such instruments, could lead to inability of the scheme to exit such debt instruments when required and generate liquidity for the scheme or lead to higher impact cost when such instruments are sold impacting portfolio returns.

Credit Risk: Securities which have a structure with a guarantee from the corporate/promoter, may see an adverse effect if there are any signs of stress at the promoter/group level, even though the standalone borrowing entity's debt servicing capability and repayments may not see any material impact, from a future cash flow perspective. CEs are exposed to credit risk pertaining not only to the issuer of the security but also to the entity providing the credit enhancement. The credit risk of debt instruments which are CE rated is based on the combined strength of the issuer as well as the structure. Hence, any weakness in either the issuer or the structure could have an adverse credit impact on the debt instrument. The weakness in structure could arise due to inability of the investors to enforce the structure due to issues such as legal risk, inability to sell the underlying collateral or enforce guarantee, etc. Therefore, apart from issuer level credit risk, such debt instruments are also susceptible to structure related credit risk.

IV. Provision related to participation of mutual funds in repo in corporate debt securities

In terms of SEBI Circular No. CIR/IMD/DF/19/2011 dated November 11, 2011 and SEBI Circular No. CIR/IMD/DF/23/2012 dated November 15, 2012, mutual funds can participate in repos in corporate debt securities as per the guidelines issued by RBI from time to time, subject to the following conditions:

- a. The gross exposure of any mutual fund scheme to repo transactions in corporate debt securities shall not be more than 10 % of the net assets of the concerned scheme.
- b. Mutual funds shall participate in repo transactions only in AA and above rated corporate debt securities.
- c. In terms of Regulation 44 (2) of the Securities and Exchange Board of India (Mutual Funds) Regulations, 1996, mutual funds shall borrow through repo transactions only if the tenor of the transaction does not exceed a period of six months.

Risks factors associated with investments in repo transactions in corporate bonds

In repo transactions, also known as a repo or sale repurchase agreement, securities are sold with the seller agreeing to buy them back at later date. The repurchase price should be greater than the original sale price, the difference effectively representing interest. A repo is economically similar to a secured loan, with the buyer receiving corporate debt securities as collateral to protect against default. The Scheme may invest in repo of corporate debt securities which are subject to the following risks:

- a. **Counterparty Risk:** This refers to the inability of the seller to meet the obligation to buy back securities at the contracted price on the contracted date. The Investment Manager will endeavor to manage counterparty risk by dealing only with counterparties, having strong credit profiles, approved by our credit risk analysis team. The exposure to each counterparty will be within the overall approved credit limits. Also, the counterparty risk is to an extent mitigated by taking collateral equivalent in value to the transaction after knocking off a minimum haircut on the intrinsic value of the collateral. In the event of default by the repo counterparty, the scheme shall have recourse to the corporate debt securities.
- b. **Collateral Risk:** Collateral risk arises when the market value of the securities is inadequate to meet the repo obligations. This risk is mitigated by restricting participation in repo transactions with collateral bearing a minimum rating as prescribed by the regulators (currently AA or equivalent and above rated money market and corporate debt securities). Any rating downgrade will tantamount to either an early termination of the repo agreement or a call for fresh margin to meet the minimum haircut requirement. In addition, the Investment manager may apply a higher haircut on the underlying security than mentioned above to adjust for the illiquidity and interest rate risk on the underlying instrument. The adequacy of the collateral will be monitored on a daily basis by considering the daily market value & applying the prescribed haircut. In the event of shortfall in the collateral, the counterparty shall be asked to replenish the same. If the counterparty is not able to top-up either in form of cash/collateral, it shall tantamount to early termination of the repo agreement.

- c. **Settlement Risk:** Corporate Bond Repo shall be settled between two counterparties in the OTC segment unlike in the case of Government securities repo transactions where CCIL stands as central counterparty on all transactions which neutralizes the settlement risk. However, the settlement risk pertaining to CDRs shall be mitigated through Delivery versus Payment (DvP) mechanism which is followed by all clearing members.

V. Risk factors associated with investments in Perpetual Debt Instruments (PDI) including Additional Tier-1 and Tier-2 bonds

The scheme may invest in certain debt instruments with special features viz. subordination to equity (absorbs losses before equity capital) and/or convertible to equity upon trigger of a pre-specified event for loss absorption including Additional Tier I bonds and Tier 2 bonds issued under Basel III framework (known as perpetual debt instruments). PDIs are instruments issued by the borrower to strengthen their capital structure and as the name suggests these instruments do not have a specific maturity date but have an embedded call option instead and maybe less liquid than conventional debt instruments. These bonds are subordinate to all other debt and only senior to equity capital. The issuer may call or redeem the bonds on the call exercise date if they can refinance the issue at a cheaper rate, especially when interest rates are declining. The issuers of such instruments could be Banks, NBFCs and Corporates. PDIs issued by Banks and NBFCs fall under scope of Reserve Bank of India ("RBI")'s guidelines for Basel III capital regulations. These are also referred to as Additional Tier I (AT1 bonds). However, there are no regulatory guidelines for issuance of PDIs by Corporates.

Since PDIs have special features other than usual non-convertible bonds, there are additional risks associated with such instruments which are listed below –

Risk related to coupon servicing –

Banks - As per the terms of the instruments, Banks may have discretion at all times to cancel distributions/payment of coupons. In the event of non-availability of adequate distributable reserves and surpluses or inadequacy in terms of capital requirements, RBI may not allow banks to make payment of coupons. These bonds may not be permitted to pay these coupons if the Bank's financial position improves subsequently (non-cumulative).

NBFCs - While NBFCs can defer/postpone payment of coupon in case paying the coupon leads to breach of capital ratios, they also have discretion at all times to cancel payment of coupon.

Corporates - Corporates usually have discretion to defer the payment of coupon. However, the coupon is usually cumulative and any deferred coupon shall accrue interest at the original coupon rate of the PDI.

Risk of write down or conversion to equity –

In the event of shortfall in maintenance of capital adequacy ratios and/or Point of Non Viability Trigger (PONV – a point defined by RBI when a bank is deemed to have become non-viable unless appropriate measures are taken to revive its operations or infusion of public sector capital), PDIs issued by Banks could be written down or converted to common equity. This risk does not exist in case of PDIs issued by NBFCs and Corporates.

Risk of call option not exercised by the issuer –

Banks and NBFCs - The issuing Banks and NBFCs have an option to call back the instrument after minimum period as per the regulatory requirement from the date of issuance and specified period thereafter, subject to meeting the RBI guidelines. However, if the issuer does not exercise the call on first call date, the Scheme may have to hold the instruments for a period beyond the first call exercise date and hence may be exposed to valuation impacts.

Corporates – Unlike Banks and NBFCs there is no minimum period for call date for Corporate issuers. However, if the corporate does not exercise the call option, the Scheme may have to hold the instruments for a period beyond the call exercise date and hence may be exposed to valuation impacts.

Risk Mitigation – The Scheme will not invest more than 10% of the NAV of the scheme in such instruments and will limit exposure to 5% of the NAV of the Scheme for such instruments issued by a single issuer.
