US economy contracted at 0.3% in the first quarter of 2025; Federal Reserve kept the funds rates unchanged

- The US economy contracted at an annualised rate of 0.3% in the first quarter of 2025, compared with a 2.4% growth in the previous quarter.
- The Federal Reserve kept the funds rate at 4.25-4.50% for the third consecutive meeting in May 2025, as officials adopted a wait-and-see approach amid concerns that US President's tariffs could drive up inflation and slow economic growth.

UK growth expands 1.1% in the first quarter of 2025; while Bank of England cut its key interest rates

- The British economy grew 1.1% in the first quarter of 2025 compared with 1.4% expansion recorded in the previous quarter.
- The Bank of England voted 5-4 to cut bank rates by 25bps to 4.25% in May 2025 compared with 4.50%.

Eurozone economy grew annually at 1.2% in the first quarter 2025

- The Eurozone economy grew 1.2% in the first quarter of 2025, matching the previous quarter's pace.
- The president of European Central Bank cautioned that global trade had been permanently altered by ongoing tariff tensions, even as major economies inched toward compromise.

Japanese economy contracted 0.7% in the first quarter of 2025

- Japan's economy contracted by 0.7% on an annualized basis in the first quarter of 2025 from an upwardly revised 2.4% growth in the fourth quarter.
- Investors the Bank of Japan urged to increase purchases of super-long bonds or halt tapering, following a sharp rise in their yields.

US treasury prices ended lower in May

- US Treasury prices ended lower in May due to upbeat economic data and optimism over the easing trade tariff war. The yield on the 10-year Treasury settled at 4.41% on May 30 compared with 4.17% on April 30.
- Bond prices declined after the US and China agreed to slash tariffs on each other's goods.
- The US and China have agreed to lower tariffs by 115 percentage points on each other to 30 per cent and 10 per cent, respectively, for 90 days as talks proceed to finalise a mutual pact.
- Yield rose further after the US President said that the US will delay implementation of a 50% tariff on goods from the European Union from June 1 until July 9 to buy time for negotiations with the bloc.
- However, bond prices witnessed few gains as latest consumer inflation numbers raised inflation fears. Concerns over US debt and Moody's downgrade of the US sovereign credit rating also boosted the safe haven appeal of US Treasuries.
- Earlier in the month, bond prices rose after the Fed kept key policy rates unchanged while raising concerns over economic growth.

Indian equity indices ended higher in May'25

- Indian equity markets gained for the third consecutive month in May, riding on domestic resilience and investor optimism.
- The gains were mainly driven by market-wide participation, including substantial foreign fund inflows and monthly SIP contributions.
- The month opened with positive investor sentiment amid steady foreign fund inflows and rising optimism sparked by signals of progress on a bilateral trade agreement between India and the US.
- As the month progressed, release of data indicating a softening in domestic inflation and anticipation of rate cuts by the RBI led to some gains.
- During the month, Indian bourses also gained from softening crude oil prices, and a brief rally in certain consumption-related sectors following news of the early onset of the monsoon and forecasts of above-average rainfall.

- MSCI World index also saw a strong rally of 5.7% in May as market shrugged off worries related US tariffs.
- Indian equity indices continued to rise steadily in May 2025 supported by strong domestic and foreign inflows with both domestic and FII flows were supportive in May.
- India's GDP growth accelerated to 7.4% (YoY) in Q4 FY25 from 6.4% in Q3 FY25, well above expectations. The stronger than expected growth was led by higher fixed investment growth and a large contribution from net exports.
- Nifty consensus EPS estimate for CY26 saw a small downward revision of 1% during May. This along with the market recovery, Nifty now trades on 20.4x 1-year forward PE. This is now in-line with its 5-year average and a ~10% premium to its 10-year average.
- Valuations in Midcap and Smallcap space have also recovered following the sharp rally in May.
- Global macro environment remains challenging with heightened geo-political and economic uncertainties. Announcement of reciprocal tariffs by the US administration could significantly impact US and global growth outlook, if the tariffs stay in place.
- Government has tried to partly address the slowdown in private consumption through the income tax rate cuts in the Union Budget. While government capex is moderating, private capex may take time to recover given global uncertainties.
- RBI is now trying to ease policy rates and liquidity conditions rapidly. With USD weakening and decline in crude prices the room for easing has increased further. Forecast of an above normal monsoon is also a positive for rural demand.
- Growth cycle in India may be bottoming out. Interest rate and liquidity cycle, decline in crude prices and normal monsoon are all supportive of a pick-up in growth going forward. Although, global trade related uncertainty remains a headwind to private capex in the near term.
- India's investment cycle to be on a medium-term uptrend supported by government investment in infrastructure and manufacturing, pickup in private investments and a recovery in real estate cycle. Expect higher private investments in renewable energy and related supply chain, localization of higher-end technology components, and India becoming a more meaningful part of global supply chains to support faster growth. Remain constructive on Indian equities supported by the more robust medium term growth outlook.

History of Debt Markets through major events

22

- Ample liquidity conditions kept interbank call money rates consistently below the repo rate of 6.0%. The weighted average call money rate for the month was 5.83% (as of May 30).
- Meanwhile, surplus liquidity, relatively tame inflation and easier central bank policies kept government bond yields low in May, in contrast with global trends. The yield on the 10-year benchmark 06.79% GS 2034 paper ended at 6.27% on May 30 compared with 6.36% on April 30.
- With US Treasury yields rising, the spread between Indian and US 10-year bond yields narrowed to the lowest in two decades. The former have been rising because of concerns over the escalation of tariffs on the country's key trading partners and its rising budget deficit.
- Bond prices also declined due to stronger-than-expected economic growth data for fourth quarter of FY25 weighed on sentiment.
- Bond prices also saw some gains because of initial expectations of a surplus transfer of more than Rs 3 lakh cr by the RBI to the government. While these hopes were not met, the anticipation of monetary policy easing provided a degree of support during May '25.

RBI Policy Outcome and Key Takeaways

25

The Monetary Policy Committee (MPC) came out with its second bi-monthly policy statement for FY26 on June 06, 2025.

Some of the key takeaways are as follows:

- In a 5 : 1 vote, the MPC decided to lower the policy Repo Rate by 50bps to 5.50%. Consequently, the SDF rate stands at 5.25% and the MSF rate at 5.75%
- The policy stance is changed back to 'neutral' from accommodative.

- On Liquidity, the Governor emphasised that the RBI remains committed to provide sufficient liquidity to the banking system and the 100bps CRR reduction backs that intent.
- The CRR reduction will be carried out in four equal tranches of 25bps each with effect from the fortnights beginning September 6, October 4, November 1 and November 29, 2025.

- The CRR cut is estimated to release primary liquidity of about INR 2.5 lakh crore to the banking system by December 2025.

- The outlook for food inflation has turned positive on robust agriculture output. Additionally, a normal monsoon and softer commodity prices should further keep inflation soft. Resultantly, CPI inflation has been revised lower to 3.70% vs 4.0% in April 2025.
- On Growth, although it has maintained the forecast at 6.50%, the MPC states that it remains lower than our aspirations more so in the current challenging global environment and heightened uncertainty.

- By May end there was a bit of calm with the US retracting & putting on standby some of its aggressive measures on its trading partners.
- Though the uncertainties linger on as the world may never be the same as the baseline tariffs continue.
- The last of the three major credit rating agencies downgraded the US sovereign rating by one notch to Aa1 which further rattled markets; straining the dollar and the US treasury yield movements driven by concerns around US debt and fiscal situation, tariff-related inflation worries and consequently leading to a higher rate regime weighed on investor sentiments.
- For India, the economic growth momentum has been resilient, at least till 4QFY25 – with GDP growth at 7.4% and the GVA growth coming in at 6.8%. India's retail inflation has softened swiftly and clocked 3.16% YoY in April.
- The growth-inflation dynamics have thereby opened-up the space for the RBI-MPC to focus on growth by reducing policy rates.
- The RBI's proactiveness in injecting substantial liquidity and decisive monetary policy easing to support growth has boosted sentiments.
- The RBI transfer of INR 2.69 lakh crore as surplus to the central government for FY25 augurs well from fiscal earnings as well as keeping durable liquidity in deep surplus.
- The RBI-MPC rate cut of 50bps to 5.50% have softened the rates across the curve and the yield curve remains steep. The third rate cut of 50bps today now takes the cumulative rate cuts of 100bps in a span of nearly 6-months along with RBI's active liquidity infusion.
- India's cooling inflation has provided the RBI-MPC to focus on supporting growth by way of front-loaded policy easing. The MPC's shift to a neutral stance implies that the scope for future cuts might be limited and also, that it will remain data dependent.
- Currently, corporate bonds in the 3-5 year segment seem to offer favourable spreads of 50-70 bps over IGBs. This we believe is the sweet spot on the corporate yield curve. Given liquidity is expected to remain in surplus for the foreseeable future, we believe corporate bond spread compression story can continue and may provide for an opportunity for further compression in corporate bonds.

Economy surpasses expectations, logs 7.4% growth in the fourth quarter of fiscal 2025 amid overall growth of 6.5% for the year

- According to the latest estimates released by the National Statistical Office, India's gross domestic product (GDP) growth rate rose to a four-quarter high of 7.4% in the fourth quarter of fiscal 2025, driven by strong industrial growth in manufacturing, construction and mining and a recovery in investment.
- Robust rural demand, supported by a strong agricultural sector and surge in government capital spending, also aided GDP growth. The print for GDP growth for fiscal 2025 came in at 6.5%, in line with government estimates.
- Stating that the GDP growth of 6.5% reflected the country's ability to outperform many of the world's larger and key economies, Chief Economic Advisor to the Government of India, expressed confidence in the momentum being carried into fiscal 2026 as well.

Gross domestic product expanded to 7.4% in Q4 of fiscal 2025

Current account deficit expanded to 1.1% of GDP for Q3 of fiscal 2025

Currency & Commodity market update

After a slippery period, rupee ends May on a stable footing

- The Indian rupee ended May 2025 at Rs 85.48 to the dollar, about 0.5% lower than the April-end level (Rs 85.05 to the dollar on April 30).
- The rupee came under pressure at the beginning of May as geopolitical tensions between India and Pakistan intensified, leading to a brief military conflict between the nations.
- Volatility in domestic equities and intermittent increases in global crude oil prices created a risk-averse sentiment, also contributing to the currency’s weakness against the greenback.

International crude oil prices rose in May

- Crude oil prices on the New York Mercantile Exchange closed at \$60.79 per barrel on May 30, 2025, up 4.43% from \$58.21 per barrel on April 30, 2025.
- Crude oil prices logged an overall slight rise in May, primarily driven by optimism surrounding US-China trade developments, a temporary tariff cut, lower US output, and escalating geopolitical tensions in the Middle East. These factors provided short-lived support to the market, lifting sentiment through the middle of the month.

(\$ Per Barrel)

Global Crude Oil prices - NYMEX (\$ per barrel)

Domestic gold prices rose in May

- Gold prices ended at Rs 95355 per 10 gram on May 30, up 1.05% from Rs 94361 per 10 grams on April 30, according to the India Bullion and Jewellers Association Ltd.
- The prices began the month lower due to easing geopolitical tensions and positive developments in US-China trade talks. This prompted profit-booking at higher levels.

Mutual funds net buyers in equity and sellers in debt

Inflows through SIPs steady in April 2025

- The domestic mutual fund (MF) industry’s assets under management (AUM) rose 6.47% (~Rs 4.25 lakh crore in absolute terms) on-month to ~Rs 69.99 lakh crore in April, compared with Rs 65.74 lakh crore the previous month, led predominantly by debt-oriented MFs.
- Assets of open-ended equity funds rose 3.8% on-month to Rs 30.57 lakh crore in April. The category witnessed net inflow of Rs 24,269 crore in April compared with an inflow of Rs 25,082 crore in March.
- Assets of hybrid funds rose 3.55% (Rs 31,378 crore) on-month to Rs 9.14 lakh crore in April owing to gains in the assets of arbitrage fund and multi asset allocation fund.
- The cumulative asset base of exchange-traded funds (ETFs) and index funds rose to Rs 11.91 lakh crore in April compared with Rs 11.46 lakh crore in March.
- Assets of open-ended solution-oriented funds rose 2.93% on-month to Rs 52,682 crore in April compared with Rs 51,182 crore in March, even as net inflow to the category eased to Rs 206 crore from Rs 241 crore.
- Collections through systematic investment plans rose to Rs 26,632 crore in April compared with Rs 25,926 crore in March. The number of SIP accounts stood at 8.89 crore as against 10.05 crore in the same period.
