Change in Investment Pattern

Subject to the Regulations, the asset allocation pattern indicated above for the Scheme may change from time to time, keeping in view market conditions, market opportunities, applicable regulations and political and economic factors. It must be clearly understood that the percentages stated above are only indicative and not absolute and that they can vary substantially depending upon the perception of the Investment Manager, the intention being at all times to seek to protect the interests of the Unitholders and meet the objective of the Scheme. Such changes in the investment pattern will be for short term and defensive considerations.

Portfolio re-balancing in case of short term defensive consideration

Due to market conditions, the AMC may invest beyond the range set out in the asset allocation. Such deviations shall normally be for a short term and defensive considerations as per para 1.14.1.2 of SEBI Master Circular on Mutual Funds dated June 27, 2024 and the fund manager will rebalance the portfolio within 30 calendar days from the date of deviation.

Portfolio re-balancing in case of passive breaches

Further, as per para 2.9 of SEBI Master Circular on Mutual Funds dated June 27, 2024, as may be amended from time to time, in the event of deviation from mandated asset allocation due to passive breaches (occurrence of instances not arising out of omission and commission of the AMC), the fund manager shall rebalance the portfolio of the Scheme within 30 Business Days. In case the portfolio of the Scheme is not rebalanced within the period of 30 Business Days, justification in writing, including details of efforts taken to rebalance the portfolio shall be placed before the Investment Committee of the AMC. The Investment Committee, if it so desires, can extend the timeline for rebalancing up to sixty (60) Business Days from the date of completion of mandated rebalancing period. Further, in case the portfolio is not rebalanced within the aforementioned mandated plus extended timelines the AMC shall comply with the prescribed restrictions, the reporting and disclosure requirements as specified in para 2.9 of SEBI Master Circular on Mutual Funds dated June 27, 2024.

Investment Strategy

Investment Approach and Risk Control

The portfolio will be constructed and actively managed to generate returns to match the investment objective and to maintain adequate liquidity to accommodate funds movement. The portfolio will primarily be invested in debt and money market instruments consisting predominantly of securities issued by entities such as Banks, Public Sector Undertakings (PSUs) and Public Financial Institutions (PFIs).

The Scheme will typically invest in short to medium term securities and as a result significant proportion of the total returns is likely to be in the form of income yield or accrual. Selective capital appreciation opportunities could be explored by extending credit and duration exposure after a careful analysis by the fund manager and considering the risk reward situation prevailing in the fixed income market at that point of time.

	<p>Investments in debt instruments carry various risks such as interest rate risk, liquidity risk, default risk, reinvestment risk etc. Whilst such risks cannot be eliminated, they may be minimized by diversification and effective use of hedging techniques.</p> <p>The Scheme may invest upto 50 of the total assets of the Scheme in derivatives for the purpose of hedging and portfolio balancing purposes. Hedging does not mean maximization of returns but only attempts to reduce systemic or market risk that may be inherent in the investment.</p> <p>Further, the portfolio of the Scheme will be constructed in accordance with the investment restrictions specified under the Regulations which would help in mitigating certain risks relating to investments in securities market.</p> <p>Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments. For detailed disclosure on derivative strategies, please refer SID of the scheme.</p>
<p>Risk Profile of the Scheme</p>	<p>Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment. Scheme specific risk factors are summarized below:</p> <p>Risk factors associated with investing in Fixed Income Securities</p> <p>Subject to the stated investment objective, the Scheme proposes to invest in debt and related instruments and the risk factors pertinent to the same are:</p> <ul style="list-style-type: none"> • The performance of Scheme may be affected by changes in Government policies, general levels of interest rates and risks associated with trading volumes, liquidity and settlement systems. • Investments in different types of securities are subject to different levels and kinds of risk. Accordingly, the Scheme's risk may increase or decrease depending upon its investment pattern. E.g. investments in corporate bonds carry a higher level of risk than investments in Government securities. Further, even among corporate bonds, bonds which have a higher rating are comparatively less risky than bonds which have a lower rating. • Price-Risk or Interest Rate Risk: As with all debt securities, changes in interest rates may affect the NAV of the Scheme as the prices of securities increase as interest rates decline and decrease as interest rates rise. Prices of long-term securities generally fluctuate more in response to interest rate changes than do short term securities. Indian debt markets can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby to possible movements in the NAV. • The change in value of a security, for a given change in yield, is higher for a security with higher duration and vice versa. Hence portfolios with higher duration will have higher volatility which leads to duration risk. • Government securities do carry price risk depending upon the general level of interest rates prevailing from time to time. The extent of fall or rise in the prices is a function of the coupon rate, days to maturity and the increase or decrease in the level of interest rates. The price of the Government securities (existing and new) is influenced only by movements in interest rates in financial systems. • In the case of floating rate instruments, an additional risk could be due to the change in the spreads of floating rate instruments. If the spreads on floating rate papers rise, then there could be a price loss on these instruments. Secondly in the case of fixed rate instruments that have been swapped for floating rates, any adverse movement in the fixed rate yields vis-à-vis swap rates could result in losses. However, floating rate debt instruments which have periodical interest rate reset, carry a lower interest rate risk as compared to fixed rate debt instruments. In a falling interest rate scenario, the returns on floating rate debt instruments may not be better than those on fixed rate debt instruments. In case of a floating rate instrument, this risk is lower as a result of periodic reset of the coupon. During the life of floating rate security or a swap the underlying benchmark index may become less active and may not capture the actual movement in the interest rates or at times the benchmark may cease to exist. These types of events may result in loss of value in the portfolio. • Liquidity Risk: This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is today characteristic of the Indian fixed income market. This represents the possibility that the realised price from selling the security might be lesser than the valuation price as a result of illiquid market. If a large outflow from the Scheme is funded by selling some of the illiquid securities, the NAV could fall even if there is no change in interest rates. Illiquid securities are typically quoted at a higher yield than the liquid securities and have higher bid offer spreads. Investment in illiquid securities results in higher current yield for the portfolio. In addition, money market securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the Scheme and may lead to the Scheme incurring losses till the security is finally sold. The corporate debt market is relatively illiquid vis-a-vis the government securities market. Even though the government securities market is more liquid compared to that of other debt instruments, on occasions, there could be difficulties in transacting in the market due to extreme volatility or unusual constriction in market volumes or on occasions when an unusually large transaction has to be put through.

Liquidity Risk for all Open-Ended Debt Schemes is measured and addressed through the below mentioned liquidity management tools.

Liquidity Management Tools	Brief Description
Potential Risk Matrix (PRC) and Risk-o-meter (RoM)	All debt schemes are bucketed in terms of Potential Risk Class matrix (PRC) based on maximum interest rate risk and credit risk parameters. PRC defines the maximum risk that a scheme will run as per design and RoM is the measurement of that risk on a regular basis. Remedial measures are in place in case any of the design boundaries are breached.
Maintenance of minimum liquid assets in all open ended debt schemes and monitoring liquid assets through LRRaR and LR-CRaR framework provided by AMFI.	All open ended debt schemes (except Overnight fund, Liquid fund, Gilt fund and Gilt Fund with 10-year constant duration) shall hold at least 10% of their net assets in liquid assets or liquidity ratio computed basis LR-RaR and LR-CRaR, whichever is higher. Similarly, liquid funds shall comply with the requirement of maintaining liquid assets at 20% of their net assets or liquidity ratio computed basis LR-RaR and LR-CRaR, whichever is higher. The Liquidity Risk Management framework defines the Liquidity Risk arising from liability side of the portfolio and covers all potential liquidity risk scenarios upto 99% confidence interval. The AMC measures and monitors liquidity risk on a monthly basis and has laid down action plan in case there is difference between actual outcome and projected outcome.
Stress Testing	Stress Testing is carried out for all open ended debt schemes (except overnight scheme) on a monthly basis as required by SEBI. The stress testing addresses the asset side risk taking into account the Interest Rate risk, Credit risk and Liquidity risk at an aggregate portfolio level and its impact on NAV. This asset side stress testing complements the liability side stress testing conducted through LR-RaR and CR-CRaR framework. The result of Stress Testing is reported to AMFI, Board of AMC and Trustee Company on an ongoing basis.
Asset Liability Management	Asset Liability Management covers monitoring of liquidity risk addressing asset liability mismatch upto a period of 90 days. The 90-day liability ratio is calculated taking into account investor behavior based on size of their investments and historic redemptions at an industry level. The 90-day liability ratio is compared with the Portfolio Liquidity ratio to ascertain if any asset liability mismatch exists.
Swing Pricing	In case of severe liquidity stress or a severe dysfunction at market level, the Swing Pricing guidelines get triggered which offers the contingency plan in case all else fails.
Borrowing	A fund may borrow to meet redemption requirements up to the limit allowed by the regulator from time to time

- **Spread risk:** Though the sovereign yield curve might remain constant, investments in corporate bonds are exposed to the risk of spread widening between corporate bonds and gilts. Typically, if this spread widens, the prices of the corporate bonds tend to fall and so could the NAV of the Schemes. Similar risk prevails for the investments in the floating rate bonds, where the benchmark might remain unchanged, but the spread over the benchmark might vary. In such an event, if the spread widens, the price and the NAV of the Schemes could fall.
- **Credit Risk:** Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e. will be unable to make timely principal and interest payments on the security). A sovereign security carries no default risk since Government raises money to meet its capital and revenue expenditure by issuing these debt or discounted securities. As the payment of interest and principal amount has a sovereign status implying no default, such securities are popularly known as "risk-free security" or "Zero Risk security". Thus Zero-Risk is the lowest risk, even lower than a security with "AAA" rating and hence commands a yield, which is lower than a yield on "AAA" security. Normally, the value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit risk as well as any actual event of default. The greater the credit risk, the greater the yield required for someone to be compensated for the increased risk. Because of this risk, corporate debentures are sold at a yield above those offered on Government Securities, which are sovereign obligations.
- **Reinvestment Risk:** This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed. However, declining interest rates normally lead to increase in bond prices which may help cushion the impact of reinvestment risk to some extent.
- **Benchmark Risk:** The floating rate segment of the domestic debt market is not very developed. Currently, majority of the issuance of floating rate papers is linked to NSE MIBOR. As the floating rate segment develops further, more benchmark rates for floating papers may be available in future. The fewer number of benchmark rates could result in limited diversification of the benchmark risk.
- **Prepayment Risk:** The risk associated with the early unscheduled return of principal on a fixed-income security. The early unscheduled return of principal may result in reinvestment risk.

- **Settlement risk:** Different segments of Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Scheme are uninvested and no return is earned thereon. The inability of the Scheme to make intended securities purchases, due to settlement problems, could cause the Scheme, to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme's portfolio, due to the absence of a well-developed and liquid secondary market for debt securities, may result at times in potential losses to the Scheme in the event of a subsequent decline in the value of securities held in the portfolio of the Scheme.

- **Market risk:** Lower rated or unrated securities are more likely to react to developments affecting the market and the credit risk than the highly rated securities which react primarily to movements in the general level of interest rates. Lower rated or unrated securities also tend to be more sensitive to economic conditions than higher rated securities.

- In addition to the factors that affect the values of securities, the NAV of Units of the Scheme will fluctuate with the movement in the broader fixed income market, money market and derivatives market and may be influenced by factors influencing such markets in general including but not limited to economic conditions, changes in interest rates, price and volume volatility in the bond and stock markets, changes in taxation, currency exchange rates, foreign investments, political, economic or other developments and closure of the stock exchanges.

Risk associated with investment in unlisted securities:

Except for any security of an associate or group company of the Sponsor, the Scheme has the power to invest in securities which are not listed on a stock exchange ("unlisted securities") which in general are subject to greater price fluctuations, less liquidity and greater risk than those which are traded in the open market. Unlisted securities may lack a liquid secondary market and there can be no assurance that the Scheme will realise its investments in unlisted securities at a fair value.

Risk Factors associated with investments in Money Market instruments

- Investments in money market instruments would involve a moderate credit risk i.e. risk of an issuer's liability to meet the principal payments. Additionally, money market securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the Scheme and may lead to the Scheme incurring losses till the security is finally sold.
- Money market instruments may also be subject to price volatility due to factors such as changes in interest rates (when interest rates in the market rise, the value of a portfolio of money market instruments can be expected to decline), general level of market liquidity and market perception of credit worthiness of the issuer of such instruments and risks associated with settlement of transactions and reinvestment of intermediate cash flows. The NAV of the Scheme's Units, to the extent that the Scheme is invested in money market instruments, will consequently be affected by the aforesaid factors. The AMC endeavours to manage such risk by the use of in house credit analysis.
- The NAV of the Scheme's Units, to the extent that the corpus of the Scheme is invested in money market instruments, will be affected by the changes in the level of interest rates. When interest rates in the market rise, the value of a portfolio of money market instruments can be expected to decline.

Provisions relating to investments in Perpetual Debt Instruments (PDI) including Additional Tier-1 and Tier-2 bonds

The Scheme may invest in certain debt instruments with special features viz. subordination to equity (absorbs losses before equity capital) and/or convertible to equity upon trigger of a pre-specified event for loss absorption including Additional Tier I bonds and Tier 2 bonds issued under Basel III framework (known as perpetual debt instruments). PDIs are instruments issued by the borrower to strengthen their capital structure and as the name suggests, these instruments do not have a specific maturity date but have an embedded call option instead and may be less liquid than conventional debt instruments. These bonds are subordinate to all other debt and only senior to equity capital. The issuer may call or redeem the bonds on the call exercise date if they can refinance the issue at a cheaper rate, especially when interest rates are declining. The issuers of such instruments could be banks, NBFCs and corporates. PDIs issued by Banks and NBFCs fall under scope of Reserve Bank of India (RBI)'s guidelines for Basel III capital regulations. These are also referred to as Additional Tier I (AT1 bonds). However, there are no regulatory guidelines for issuance of PDIs by corporates. Since PDIs have special features other than usual non-convertible bonds, there are additional risks associated with such instruments which are listed below –

Risk related to coupon servicing

Banks - As per the terms of the instruments, Banks may have discretion at all times to cancel distributions/payment of coupons. In the event of non-availability of adequate distributable reserves and surpluses or inadequacy in terms of capital requirements, RBI may not allow banks to make payment of coupons. These bonds may not be permitted to pay these coupons if the Bank's financial position improves subsequently (non-cumulative).

NBFCs - While NBFCs can defer/postpone payment of coupon in case paying the coupon leads to breach of capital ratios, they also have discretion at all times to cancel payment of coupon.

Corporates - Corporates usually have discretion to defer the payment of coupon. However, the coupon is usually cumulative and any deferred coupon shall accrue interest at the original coupon rate of the PDI.

Risk of write down or conversion to equity

In the event of shortfall in maintenance of capital adequacy ratios and/or Point of Non-Viability Trigger (PONV – a point defined by RBI when a bank is deemed to have become non-viable unless appropriate measures are taken to revive its operations or infusion of public sector capital), PDIs issued by Banks could be written down or converted to common equity. This risk does not exist in case of PDIs issued by NBFCs and Corporates.

Risk of call option not exercised by the issuer

Banks and NBFCs - The issuing Banks and NBFCs have an option to call back the instrument after minimum period as per the regulatory requirement from the date of issuance and specified period thereafter, subject to meeting the RBI guidelines. However, if the issuer does not exercise the call on first call date, the Scheme may have to hold the instruments for a period beyond the first call exercise date and hence maybe exposed valuation impacts.

Corporates – Unlike Banks and NBFCs there is no minimum period for call date for corporate issuers. However, if the corporate does not exercise the call option, the Scheme may have to hold the instruments for a period beyond the call exercise date and hence maybe exposed to valuation impacts.

Risk Mitigation – The Scheme will not invest more than 10% of the NAV of the Scheme in such instruments and will limit exposure to 5% of the NAV of the Scheme for such instruments issued by a single issuer.

Risks associated with investing in securitised debt

The underlying assets in securitised debt may assume different forms and the general types of receivables include auto finance, credit cards, home loans or any such receipts. Credit risks relating to such receivables depend upon various factors, including macro- economic factors of these industries and economies. Further, specific factors like the nature and adequacy of property mortgaged against these borrowings, the nature of loan agreement/mortgage deed in case of home loans, adequacy of documentation in case of auto finance and home loans, capacity of a borrower to meet his obligations on borrowings in case of credit cards and intentions of the borrower also influence the risks relating to asset borrowings underlying securitised debt. Additionally, the nature of the asset borrowings underlying the securitised debt also influences the underlying risk, for instance while residential mortgages tend to have lower default rates, repossession and recovery is easier in case of commercial vehicles. Credit rating agencies take into account a series of such factors and follow an elaborate system involving stipulation of margins, over-collateralisation and guarantees to provide a rating for securitised debt.

- In case of securitised debt, changes in market interest rates and pre-payments may not change the absolute amount of receivables for the investors but may have an impact on the reinvestment of the periodic cash flows that an investor receives on securitised papers.
- **Tenor risk:** While building the planned amortization schedule for a PTC, there can be a clause stating a minimum percentage of receivable by the issue to stick to the initial cash flows. If the receivables are less than the minimum stated receivables then the tenor of the PTC can get elongated or vice versa.
- **Risk due to prepayment:** Asset securitization is a process whereby commercial or consumer credits are packaged and sold in the form of financial instruments. In the event of pre-payment of the underlying debt, investors may be exposed to changes in tenor and yield.
- **Liquidity Risk:** Presently, despite recent legal developments permitting the listing of securitised debt instruments, the secondary market for securitised debt in India is not very liquid.
Even if a more liquid market develops in the future, secondary transactions in such instruments may be at a discount to initial issue price due to changes in the interest rate structure.
- **Limited Recourse, Delinquency and Credit Risk:** Certificates issued on investment in securitised debt represent a beneficial interest in the underlying receivables and there is no obligation on the issuer, seller or the originator in that regard. Defaults on the underlying loan can adversely affect the pay outs to the investors and thereby, adversely affect the NAV of the Scheme. While it is possible to repossess and sell the underlying asset, various factors can delay or prevent repossession and the price obtained on sale of such assets may be low. Delinquencies and credit losses may cause depletion of the amount available under the Credit Enhancement and thereby the Investor Payouts may get affected if the amount available in the Credit Enhancement facility is not enough to cover the shortfall. On persistent default of a Obligor to repay his obligation, the Servicer may repossess and sell the underlying Asset. However many factors may affect, delay or prevent the repossession of such Asset or the length of time required to realize the sale proceeds on such sales. In addition, the price at which such Asset may be sold may be lower than the amount due from that Obligor.
- **Bankruptcy Risk:** If the originator of securitised debt instruments in which the Scheme invest is subject to bankruptcy proceedings and the court in such proceedings concludes that the sale of the assets from originator to the trust was not a 'true sale', then the Scheme could experience losses or delays in the payments due. Normally, care is taken in structuring the securitization transaction so as to minimize the risk of the sale to the trust not being construed as a 'true sale'.
- **Risk of Co-mingling:** Servicers in a securitization transaction normally deposit all payments received from the obligors into a collection account. However, there could be a time gap between collection by a servicer and depositing the same into the collection account. In this interim period, collections from the loan agreements by the servicer may not be segregated from other funds of the servicer. If the servicer fails to remit such funds due to investors, investors in the Scheme may be exposed to a potential loss.

Risks associated with investing in Derivatives

The Scheme may invest in derivative products in accordance with and to the extent permitted under the Regulations and by SEBI/RBI. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself. Trading in derivatives carries a high degree of risk although they are traded at a relatively small amount of margin which provides the possibility of great profit or loss in comparison with the principal investment amount. Thus, derivatives are highly leveraged instruments. Even a small price movement in the underlying security could have an impact on their value and consequently, on the NAV of the Units of the Scheme.

- The derivatives market in India is nascent and does not have the volumes that may be seen in other developed markets, which may result in volatility to the values.

- Investment in derivatives also requires the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. Even a small price movement in the underlying security could have an impact on their value and consequently, on the NAV of the Units of the Scheme.
- The Scheme may find it difficult or impossible to execute derivative transactions in certain circumstances.
- The Scheme bears a risk that it may not be able to correctly forecast future market trends or the value of assets, indices or other financial or economic factors in establishing derivative positions for the Scheme.
- There is the possibility that a loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the “counterparty”) to comply with the terms of the derivatives contract.
- Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.
- Interest Rate Swaps (IRS) are highly specialized instruments that require investment technique and risk analysis different from those associated with equity shares and other traditional securities. The use of an Interest Rate Swap (IRS) requires not only an understanding of the referenced asset, reference rate or index but also of the swap itself, without the benefit of observing the performance of the swap under all possible market conditions. Swap agreements are also subject to liquidity risk, which exists when a particular swap is difficult to purchase or sell. Swap agreements may be subject to pricing risk, which exists when a particular swap becomes extraordinarily expensive (or cheap) relative to historical prices or the prices of corresponding cash market instruments. IRS agreements are also subject to counterparty risk on account of insolvency or bankruptcy or failure of the counterparty to make required payments or otherwise comply with the terms of the agreement.
- Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor.
- Execution of investment strategies depends upon the ability of the fund manager(s) to identify such opportunities which may not be available at all times. Identification and execution of the strategies to be pursued by the fund manager(s) involve uncertainty and decision of fund manager(s) may not always be profitable. No assurance can be given that the fund manager(s) will be able to identify or execute such strategies.
- The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

Risks pertaining to Interest Rate Futures

- **Performance risk:** Hedging interest rate duration risk in a falling interest rate environment could limit the profits on the bond portfolio if interest rate call of the fund manager goes wrong.
- **Default Risk:** This is the risk that losses will be incurred due to default by counter party. This is also referred to as counterparty risk. However, this risk is negligible if the trades are cash settled through a Clearing Corporation.
- **Price Risk:** Despite the risk mitigation provided by various derivative instruments, there remains an inherent price risk which may result in losses exceeding actual underlying.
- **Basis Risk:** This risk arises when the derivative instrument used to hedge the underlying asset does not match the movement of the underlying being hedged for e.g. mismatch between the maturity date of the futures and the actual selling date of the asset.
- **Liquidity risk:** This risk pertains to how saleable a security is in the market. All securities/instruments may be exposed to liquidity risk (when the sellers outnumber buyers) which may impact returns while exiting opportunities.

Risk factors related to investments in Structured Obligations (SO)/Credit Enhancements (CE):

Structured Obligations (SO) are complex financial instruments issued by entities intending to improve their financing profile with the help of non-conventional financial instruments. Credit Enhancement (CE) rating is assigned by Credit Rating agencies to a debt security based on an identifiable credit enhancement for the security which could be in the form of letter of comfort, guarantee, shortfall undertaking etc. from another entity than the issuer, related or not related to the issuer. CE could additionally include pledging of equity shares listed on a stock exchange with a suitable haircut. Apart from standard risks related to debt instruments, these instruments are further exposed to the below risks:

Liquidity Risk: SO rated securities are often complex structures, with a variety of credit enhancements. Debt securities generally lack a well-developed secondary market in India, and due to the credit enhanced nature of CE securities as well as structured nature of SO securities, the liquidity in the market for these instruments is shallow compared to similar rated conventional debt instruments. Hence, lower liquidity of such instruments, could lead to inability of the scheme to exit such debt instruments when required and generate liquidity for the scheme or lead to higher impact cost when such instruments are sold impacting portfolio returns.

Credit Risk: Securities which have a structure with a guarantee from the corporate/promoter, may see an adverse effect if there are any signs of stress at the promoter/group level, even though the standalone borrowing entity's debt servicing capability and repayments may not see any material impact, from a future cash flow perspective. CEs are exposed to credit risk pertaining not only to the issuer of the security but also to the entity providing the credit enhancement. The credit risk of debt instruments which are CE rated is based on the combined strength of the issuer as well as the structure. Hence, any weakness in either the issuer or the structure could have an adverse credit impact on the debt instrument. The weakness in structure could arise due to inability of the investors to enforce the structure due to issues such as legal risk, inability to sell the underlying collateral or enforce guarantee, etc. Therefore, apart from issuer level credit risk such debt instruments are also susceptible to structure related credit risk.

Risk associated with short selling and securities lending by Scheme

Short Selling Risk: The risk associated with upward movement in market price of security sold short may result in loss. The losses on short position may be unlimited as there is no upper limit on rise in price of a security.

Securities Lending: The risks in lending portfolio securities, as with other extensions of credit, consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lender of securities i.e., the Scheme and the approved intermediary. Such failure to comply can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Mutual Fund may not be able to sell such lent securities and this can lead to temporary illiquidity

Risks associated with investments in Repo transactions in Corporate Bonds

In repo transactions, also known as a repo or sale repurchase agreement, securities are sold with the seller agreeing to buy them back at later date. The repurchase price should be greater than the original sale price, the difference effectively representing interest. A repo is economically similar to a secured loan, with the buyer receiving corporate debt securities as collateral to protect against default. The Scheme may invest in repo of corporate debt securities which are subject to the following risks:

- a. **Counterparty Risk:** This refers to the inability of the seller to meet the obligation to buy back securities at the contracted price on the contracted date. The Investment Manager will endeavour to manage counterparty risk by dealing only with counterparties, having strong credit profiles, approved by our credit risk analysis team. The exposure to each counterparty will be within the overall approved credit limits. Also, the counterparty risk is to an extent mitigated by taking collateral equivalent in value to the transaction after knocking off a minimum haircut on the intrinsic value of the collateral. In the event of default by the repo counterparty, the scheme shall have recourse to the corporate debt securities.
- b. **Collateral Risk:** Collateral risk arises when the market value of the securities is inadequate to meet the repo obligations. This risk is mitigated by restricting participation in repo transactions with collateral bearing a minimum rating as prescribed by the regulators (currently AA or equivalent and above rated money market and corporate debt securities). Any rating downgrade will tantamount to either an early termination of the repo agreement or a call for fresh margin to meet the minimum haircut requirement. In addition, the Investment manager may apply a higher haircut on the underlying security than mentioned above to adjust for the illiquidity and interest rate risk on the underlying instrument. The adequacy of the collateral will be monitored on a daily basis by considering the daily market value & applying the prescribed haircut. In the event of shortfall in the collateral, the counterparty shall be asked to replenish the same. If the counterparty is not able to top-up either in form of cash/collateral, it shall tantamount to early termination of the repo agreement.
- c. **Settlement Risk:** Corporate Bond Repo shall be settled between two counterparties in the OTC segment unlike in the case of Government securities repo transactions where CCIL stands as central counterparty on all transactions which neutralizes the settlement risk. However, the settlement risk pertaining to CDRs shall be mitigated through Delivery versus Payment (DvP) mechanism which is followed by all clearing members.

Risk factors associated with Imperfect Hedging using Interest Rate Futures

- **Liquidity/execution risk** – IRF are relatively new instruments traded on the exchanges and do not have much liquidity as compared to the OTC market in the underlying bond. This could expose the hedge to liquidity risk and associated impact cost.
- **Basis risk** – This is an inherent risk when a trader takes a hedging position using IRF. The basis risk could occur due to a small price difference between the IRF security and portfolio security hedged. When large investment is involved, the basis risk can have a significant impact on realised profit and loss of the position.
- **Correlation weakening risk** – As per the regulation, the IRF must have a 0.90 correlation coefficient with the underlying bond/portfolio, for the past 90 days, to be considered for imperfect hedging. If such correlation does not exist any time, the derivative position needs to be counted under gross exposure. An early winding down hedge position could lead to unnecessary costs (Impact or transaction).
- **Spread risk** – The IRF is based on government securities and treasury bills. Imperfect hedging can be applied on portfolios comprised of corporate bonds as well. Corporate bond yield theoretically comprises of the risk-free rate, liquidity and credit spread. IRF would hedge out only the risk-free rate. Any compression/expansion of credit spread of the underlying portfolio would not be hedged by the IRF.
- **Unwinding risk** – an unexpected change in market conditions may require unwinding the derivative positions at disadvantageous prices during periods of heightened volatility e.g. if the yields slide lower due to a surprise RBI rate cut, participants with short Interest Rate Futures positions would seek to cut their losses and exit, leading to an increase in the price of the IRF, and negative price impact on the hedged portfolio there from.

Risks associated with transaction in Units through Stock Exchange mechanism

In respect of transactions in Units of the Scheme routed through the BSE StAR MF platform or any other recognised stock exchange platform as intimated by the AMC, allotment and redemption of Units on any Business Day will depend upon the order processing/settlement by BSE, or such other exchange and their respective clearing corporations on which the Fund has no control. Further, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by BSE or such other recognised exchange in this regard.

Risks associated with Segregated Portfolio

Liquidity risk - Segregated Portfolio is created to separate debt and money market instruments affected by a Credit Event from the Main Portfolio of the Scheme. The Fund will not permit redemption of the Segregated Portfolio units, but the units will be listed on a recognized stock exchange. The Fund is not assuring any liquidity of such units on the stock exchange. Further, trading price of units on the stock exchange may be significantly lower than the prevailing NAV. Investors can continue to transact (subscribe/redeem) from the Main Portfolio.

Credit risk - While the AMC will put in sincere efforts to recover the securities in the Segregated Portfolio and distribute the same to unit holders, it is likely that such securities may not realize any value leading to losses to investors.

Risk factor associated with legal, tax and regulatory risk

The Scheme could be exposed to changes in legal, tax and regulatory regime which may adversely affect it and/or the investors. Such changes could also have retrospective effect and could lead to additional taxation imposed on the Schemes which was not contemplated either when investments were made, valued or disposed off.

Backstop facility in form of investment in Corporate Debt Market Development Fund (CDMDF):

CDMDF is set up as a scheme of the Trust registered as an Alternative Investment Fund ('AIF') in accordance with the SEBI (Alternative Investment Funds) Regulations, 2012 ("AIF Regulations") which is launched as a closed-ended scheme with an initial tenure of 15 years (extendable) from the date of its initial closing. The Investment Manager-cum-Sponsor of CDMDF shall be SBI Funds Management Ltd., the asset management company of SBI Mutual Fund. The objective of the CDMDF is to help to develop the corporate debt market by providing backstop facility to instill confidence amongst the market participants in the corporate debt/bond market during times of market dislocation and to enhance the secondary market liquidity. In times of market dislocation, CDMDF shall purchase and hold eligible corporate debt securities from the participating investors (i.e., specified debt-oriented MF schemes to begin with) and sell as markets recover. The CDMDF will thus act as a key enabler for facilitating liquidity in the corporate debt market and to respond quickly in times of market dislocation. The trigger and period for which the backstop facility will be open shall be as decided by SEBI. Thus, this backstop facility will help fund managers of the aforementioned Schemes to better generate liquidity during market dislocation to help the schemes fulfill liquidity obligations under stress situation.

In accordance with the requirement of regulation 43A of SEBI (Mutual Funds) Regulations, 1996 read with SEBI circular no. SEBI/HO/IMD/PoD2/P/CIR/2023/129 dated July 27, 2023 on Investment by Mutual Fund Schemes in units of Corporate Debt Market Development Fund, the aforementioned schemes shall invest 25 bps of its AUM as on December 31, 2022 in the units of the Corporate Debt Market Development Fund ('CDMDF'). An incremental contribution to CDMDF shall be made every six months to ensure 25 bps of scheme AUM is invested in units of CDMDF. However, if AUM decreases there shall be no return or redemption from CDMDF. Contribution made to CDMDF, including the appreciations on the same, if any, shall be locked-in till winding up of the CDMDF.

We would further like to bring to the notice of the investors that investments in CDMDF units shall not be considered as violation while considering maturity restriction as applicable for various purposes (including applicable Investment limits) and the calculations of Potential Risk Class (PRC) Matrix, Risk-o-meter, Stress testing and Duration for various purposes shall be done after excluding investments in units of CDMDF. Contribution by the Specified open ended Debt-Oriented Schemes shall be treated as an investment and not an expense, and hence shall form part of Net Asset Value (NAV) of the Specified open ended Debt-Oriented Schemes.

Investors are requested to read disclosure on investment of the schemes in the CDMDF as listed in Part II - "How will the Scheme Allocate its Assets and "Where will the Scheme Invest?"

Further, no entry/exit load shall be charged for units allotted under Reinvestment of IDCW option.</p> <p>However, it must be distinctly understood that the actual declaration of IDCWs under the Scheme and the frequency thereof will, inter-alia, depend upon the distributable surplus of the Scheme, as computed in accordance with SEBI Regulations. The Board of Directors of Trustee Company reserve the right of IDCW declaration and to change the frequency, date of declaration and the decision of the Board of Directors of Trustee Company in this regard shall be final. There is no assurance or guarantee to Unit holders as to the rate of IDCW distribution nor that IDCW will be regularly paid.</p> <p>The IDCW that may be paid out of the net surplus of the Scheme will be paid only to those Unit holders whose names appear in the register of Unit holders on the notified record date. In case of Units held in dematerialized mode, the Depositories (NSDL/CDSL) will give the list of demat account holders and the number of units held by them in demat form on the Record Date to the Registrars and Transfer Agent of the Mutual Fund. Unit holders who opt for this Option will not receive any IDCW in normal circumstances. Under the Income Distribution cum Capital Withdrawal Option (IDCW), it is proposed to distribute IDCWs at regular intervals, subject to availability of distributable profits, as computed in accordance with SEBI Regulations. Investors in the Scheme have the choice of opting for either payout or reinvestment of IDCW, as stated above. Subsequent to the declaration of IDCW, NAV of the Income Distribution cum Capital Withdrawal Option (IDCW) and Growth Option will be different.</p> <p>IDCW Distribution Procedure</p> <p>In accordance with Chapter 11 and para 13.2 of SEBI Master Circular on Mutual Funds dated June 27, 2024, the procedure for IDCW Distribution would be as under:</p> <ol style="list-style-type: none"> i. Employee Unique Identification Number (EUIIN): Para 15.11 of SEBI Master Circular on Mutual Funds dated June 27, 2024, required creation of a unique identity number of the employee/relationship manager/sales person of the distributors interacting with the investor for the sale of mutual fund products, in addition to the AMFI Registration Number (ARN) of the distributor. This has been recommended by SEBI in order to avoid any instance of mis-selling, particularly in advisory based transactions.
