

The Asset Factsheet - November 2020

Reach new heights with great **focus**.

HSBC Focused Equity Fund

(Focused Fund - An open ended equity scheme investing in maximum 30 stocks across market caps (i.e. Multi-Cap))

Your dreams and aspirations come alive when you're truly focused on them.
Just how **HSBC Focused Equity Fund** invests in a select portfolio of upto 30 Indian companies.
So that you can reap the benefits of a focused investment strategy.

This product is suitable for investors who are seeking*:

- ♦ Long term wealth creation
- ♦ Investment in equity and equity related securities across market capitalization in maximum 30 stocks

* Investors should consult their financial advisers if in doubt about whether the product is suitable for them.

Investors understand that their principal will be at Moderately High risk.

Market Review

Equity markets globally and in India, witnessed a significant rally during November, with global equities recording the best ever monthly performance in the recent memory. The rally in equities was triggered by a global risk-on view, following the US elections, positive news flows on vaccine development and relative weakening of US dollar, that drove flows into emerging markets.

The domestic market indices reflected the sharp rally seen elsewhere with BSE Sensex and NSE CNX Nifty gaining 11.4% each. The broader market indices viz BSE Mid cap and Small cap indices outperformed delivering returns of 13.7% & 13.4% respectively, driven by the broader market catch-up rally. Within sectors, Financials, Industrials, Discretionary and Utilities outperformed while Energy, IT, Healthcare and Staples were the key laggards as the sector rotation factor assumed prominence during the month.

India's COVID-19 situation seems now under control after the peak of the daily new cases were registered during the September. Government unveiled its third set of measures to revive economy during the month, which focused mainly on reviving the supply side aspects. The key themes this time around were temporary wage subsidy program to buttress job losses, efforts to enhance and extend the credit guarantee scheme, more production-linked incentives to attract multi-national companies to relocate to India, and more resources to bolster infrastructure and housing, among others.

2QFY21 was a strong quarter, beating expectations across most sectors, led by margin surprises and in-line revenue performance. Revenues rebounded at a faster pace than costs post the lockdown, resulting in earnings beat. Key highlights of the quarter were strong margin led by cost rationalization and sustained pricing environment along with positive management commentaries on Sep/Oct exit run-rate on revenues as reopening process is driving sharp demand rebound in multiple sectors. The GDP contraction for 2QFY21 came better at 7.5% YoY compared to consensus expectation of a higher decline (-8.2% YoY). Sharp rebound in manufacturing segment (+0.6% vs. -39.3% in 1QFY21) helped.

FII recorded their highest ever monthly net inflows into Indian equities at USD 9.56 bn for November. This has taken the CYTD net inflows to USD 16.1 bn. DIIs on the other hand continued to see net outflows driven by redemption pressure seen from MF investors and net outflows from insurers. MFs and Insurers saw net outflows of ~USD 4.14 bn and ~USD 2.46 bn respectively (combined DII net outflows for Nov 2020 at ~USD 6.61 bn). During 2020 so far, DIIs are only marginal net buyers to the tune of ~USD 90 mn out of which insurers are at ~USD 4.11 bn of net inflows while the MFs have seen net outflows to the tune of ~USD 4.02 bn.

Global Market Update

Global equities registered its best ever monthly gains in the recent memory with MSCI World index gaining 12.2%. Emerging markets such as Brazil and Russia outperformed along with Europe and Japan. Positive vaccine development news flows, Biden victory in the US and a weaker USD driving EM flows were the key factors that drove the equity performance during the month. Multiple vaccine developments and the significantly improving efficacy rates from large sample sets (now closer to 100%), provided much needed impetus for the continuing equity performance. In addition, global central banks are staying committed to policy support to revive economic recovery, which shall continue to spur liquidity for global markets. The uncertainty related to the US stimulus may wane away, as the US election outcome is now known while the European Central Bank (ECB) has indicated that it expects to increase policy support at its December monetary policy meeting given the hit to growth from the COVID second wave. The Bank of England (BoE) boosted its QE programme by GBP 150 bn during November. We continue to hold the view of a 'swoosh' style recovery for the global economy which shall mean a sharp rebound (which we are witnessing) in the near-term followed by a more gradual recovery. The global economy needs ongoing policy support and see central banks continuing on an accommodative stance to maintain the flow of credit to the economies and to enable fiscal easing from time to time. Also, given that there is little risk of inflation in the near term, risk free rates are expected to remain near zero levels, which is positive for equities. Worsening global relations with China, need for any extended lockdowns and delay in follow-on stimulus are the factors to monitor closely in the near term.

Macro market view

After the sharp economic contraction seen in the lockdown phase (i.e. 1QFY21), the worst phase of output loss is behind us. The economic activity levels have rebounded and in majority of the segments, it is either above or closer to pre-COVID levels. The segments that are worst impacted due to the pandemic such as travel, tourism, hospitality, entertainment, construction etc. are seeing a more gradual recovery but that trend can get accelerated if the vaccine intervention come much earlier than current expectation of mid-2021 timeline. India's daily new COVID-19 cases tally has continued to moderate through November and this is comforting as there were some fears owing to increased festive season activities along with the factor of the onset of winter. So far things have by and large held up well on this front, barring some geographical pockets. Commentary about the festive demand has been positive though we will get more clarity as more data points emerge on this front. But at an overall level, the recovery process especially with respect to the rebound in economic activity levels, has been much faster compared to initial expectations. As a result, a faster normalization process for the economy and a return to pre-COVID levels by 4QFY21, remain sanguine in expectations, at this juncture. However, any resurgence in the virus infections, would be detrimental to the recovery process, thereby pushing forward the timeline, which is already priced in by the markets.

MSCI Brazil	1,657	23.7%	-30.2%

Equity Market view

Equity markets globally and in India were buoyed by positive vaccine development news flows, US election outcome (uncertainty out of the way) and strong flows into emerging markets. The ample liquidity supported the upward trajectory as India also witnessed its best ever monthly net FII flows during November. However, despite this India underperformed other key emerging markets on gains during the month. Sector rotation, value outperformance and broader market catch-up were the key themes that played out in the November rally.

The sharp recovery rally in equity markets mirror the reopening of the economy post the lockdown phase and the meaningful rebound in economy and high frequency indicators, which is continuing till date. The corporate India performance during 1HFY21 (as reflected in the results in 1Q and 2Q) has been far more resilient compared to initial expectations. While the topline saw the expected impact of the loss in demand due to lockdown, the bottom-line performance has exceeded expectations driven by cost optimization initiatives. The recovery in topline is also swifter as reflected in the trends from 2QFY21 results. Barring the most disrupted segments such as travel, tourism, hospitality, entertainment, construction etc., the return journey to pre-pandemic levels, remains on a fast track. This is visible in the current market pricing levels.

Focus of the market participants may now move to reopening themes, as there is now a bright light at the end of a much shorter tunnel, owing to the faster than anticipated vaccine developments. Going forward, the focus would be on safety data, FDA approval, production schedule, and distribution of the vaccine across the world. Timelines with respect to successful vaccination will have an impact on recovery trajectory of economies including India. However, markets will price these positive scenarios significantly ahead of the actual timeline, which was visible in the November rally. As a result, the catch-up plays may still remain in demand which could sustain the sector rotation trends and the broader market driven performance.

We believe, that there would continue to be a dichotomy between the real economy and the performance of the dominant companies in the listed universe. This we believe is due to the ability of the larger companies (including dominant companies) to adapt and ride the disruption much more efficiently owing to its scale of economies (cost advantage), technological superiority (digital readiness) and balance sheet strength. As a result, the strong players are likely to come out much stronger, which will be reflected in market share gains and consolidation of profit pool across sectors. This would be more visible during periods of disruption, such as the current one. Hence, the earnings impact for FY21 (especially narrow benchmark indices) could turn out to be much lower compared to the economic output loss that we may encounter (which will be reflected in the negative GDP print).

The current low interest rate environment (both domestically and globally) is likely to sustain in the foreseeable future. A sustained period of lower cost of capital coupled with low real rates, should provide a conducive setting for equity as an asset class. However, any permanent demand dislocation or slower demand recovery can cloud this positive canvas, as the revival in investment cycle is a prerequisite for sustained upcycle in equities.

Valuations

Valuations are neither expensive nor cheap and we need to analyse the same in a composite manner. On P/E and P/B basis, markets are now trending above historical averages. On the other hand, the current lower cost of capital continue make equities relatively more attractive, even after the significant outperformance. On P/E basis, Nifty is currently trading at 26.7x / 19.4x FY21/22 earnings estimates, with significant earnings rebound assumed over the next 6 quarters. On P/B, Nifty is trading at 3x / 2.7x FY21/22 estimates. After the rally in mid and small caps, their valuation differential with respect to large caps have now narrowed. We expect the market to be range-bound but sector rotation trends could be visible.

(source: Bloomberg, MOSL & HSBC MF estimates as on Nov end).

Key Factors to Consider

- COVID-19: Concerns around second wave, lockdowns and resultant economic impact both domestically and globally.
- COVID-19: Vaccine development news flows, safety data, FDA approval, production schedule, and distribution of the vaccine across the world.
- Stimulus announcements in the US and other DMs along with policy support from Central banks.
- Shape of the economic growth as well as on corporate earnings recovery in India
- Follow on fiscal and monetary actions globally and in India to contain the impact of the crisis
- Other key risks are – Stimulus being withdrawn too early or the lack of add-on stimulus and geo-political risks

Portfolio Strategy and Update

Our fund's philosophy has been to invest in dominant businesses having scalable businesses, available at reasonable valuations. Over the past few years, we've witnessed a trend of profit pool consolidating with the dominant players in respective sectors/industries. We believe that the trend will accelerate as the current disruption has higher magnitude as well as it encompasses more sectors. This has increased our resolve to be true to our philosophy. We believe that these stocks would stand to gain market share even in the sluggish phases of the economy and achieve revenue traction when the economy returns to normalcy. From a medium to long term perspective, the current phase of disruption shall also pave way for accelerated digital adoption by consumers as well as enterprises. We see telecom, internet economy, ecommerce, technology vendors etc., to benefit from this disruption. Another long term theme is that of diversification of the global supply chain due to 'China + 1' strategy which could be adopted by corporates as well as economies and India could stand to benefit out of that.

In the short term we see the recovery phase continue to play out for corporate India, and earnings growth is likely to be back from 3Q onwards. After positive surprise in corporate results in 1Q and 2Q, expectations are high. Our investment strategy will focus on earnings growth implied by the valuations in the context of prevailing cost of capital and excess liquidity. We would also be mindful of the fact that, the faster than expected vaccine development has the potential to accelerate the reopening and recovery process. It has the potential to bridge the gap between dominant players and disrupted players. This would mean that highly disrupted sectors could come back to focus and they would benefit from the sector rotation trades. This has partly playing out during November along with other themes such as preference for value (including cyclicals) and broader market catch-up. We however remain positively disposed towards companies with relatively higher earnings resilience and ones with stronger balance sheets. Earnings delivery is still the most important element that we focus on, but within that there is an emphasis on ideas with scope for positive earnings surprises. From a bottom up perspective, we are looking at dominant players/leaders in badly disrupted sectors but that are on verge of revival (Eg: Multiplexes, Retail, Real Estate etc.).

At a sectoral level, we currently hold a positive view on Healthcare, Consumer Discretionary, Financials, Telecom and Real Estate sectors. We are also positive on Cement and Specialty chemicals, owing to strong demand recovery in the former while the latter being a beneficiary of the global supply chain diversification away from China. Within the discretionary basket, we are positive on companies that have rebounded in the pandemic phase itself (Eg: auto OEMs due to preference for personal mobility), companies that saw demand rebound within the recovery phase (Eg: white goods, apparels etc.) and companies still to see meaningful rebound but expected to be beneficiaries of industry consolidation and formalization (Eg: retailers, QSR etc.). There are sectors, which have underperformed the markets (Eg: Financials, Real Estate, Utilities, Industrials & Energy). Within these sectors, we reckon that markets were overly pessimistic about leading Financials as well as dominant real estate players. Those are our contrarian bets and we saw some reversal in performance especially from Financials during October-November. Within Financials, we are positive on large private banks and select large NBFCs and negative on PSU Banks, old or small private banks, and other NBFCs. Our positive stance on select lending institutions is driven by our assessment that the market is currently assuming that the loan slippages and consequent credit costs to be much higher than what is being guided by banks on account or what the market is ascribing to the rest of the economy. Hence, we think that there is a relative divergence in the assessment of risks and the valuations of private lending financials/banks.

We are neutral on Technology and Materials (positive on Cement and Chemicals while negative on Metals) sectors. Our neutral position in Technology sector is on account of the sector being a beneficiary of shift to digital and increased demand for technology in the medium term but at the same time, the near term sector valuations reflect this. In Staples, we have moved to underweight from neutral due to rich valuations and lack of positive triggers from hereon and we have used the reduction in weight here to increase weight in Financials and Real Estate. We are not positive about capex intensive sectors and/or sectors dependent on meaningful jump in urban consumption (especially if valuations are ahead of fundamentals). As a result, we continue to have a negative view on Industrials, Energy and Utilities.

** Returns mentioned in the report are the Total Return or TR variants of the respective domestic indices. USD return for global indices.*

Debt Markets

Market Summary for the month of November

The yields during the month remained range bound with subdued volume as it was a festival holiday month. As guided in the previous policy, RBI conducted OMOs but not of the size announced earlier at INR 200bn but of INR 100bn and that too a twist operation and not an outright one. Also the OMOs were not regular as nothing was conducted in the last week of November. This led market to believe that perhaps RBI wants to save its ammunition of any larger intervention for a later date. RBI and government also introduced a new 10-year G-Sec benchmark (the third for the year) priced at 5.85%.

10-year G-Sec benchmark moved between a narrow range of 5.86% – 5.91% during the month largely supported by RBI actions. Despite inflation coming in higher than expectations, market did not see much reaction. On the last day of the month, benchmark saw a spike of 4bps on the cues of a stronger than expected GDP print. SDL spread saw some reversal and there was only one OMO of INR 100bn conducted during the month in SDLs'. The sharp compression witnessed in October '20 was given up and spreads widened by ~10-20bps.

Outlook

So far RBI has been in the driver's seat with macro factors being relegated to the backseat. However, prospectively macro factors could have more influencing dynamics on the yields as global yields move higher. Recovery in growth has started to happen and stickiness in inflation may continue to persist and crude pressure could gradually resurface with pick up in global growth.

Liquidity is expected to remain in significant surplus driven by FX operations of RBI unless there is a strong revival in growth to kick start credit cycle. RBI dollar buying has been driven by strong FII flows. Therefore, with liquidity as the key driver, we would retain a constructive view on the rates eyeing the front and medium part of yield curve as the key pocket of opportunity. Longer end of the curve, is currently supported by RBI actions and slowdown in credit offtake for banks. Fiscal pressures and resultant supply pressures will abate soon as focus shifts towards budget and supply calendar of next year. However, prospect of any further strong rally is low at this time as recovery in growth will gradually wean away the strong RBI supportive measures. Therefore, we continue to expect longer end of the curve to remain range bound but tactical calls by going long may result in some alpha-generation for portfolio in the near term, given the persistent support of RBI to that part of the curve.

In the corporate space, spreads compressed some more specially in the shorter end of the curve driven by liquidity and lesser supply. In the longer end the movement was largely in line with G-secs. We do not expect any meaningful compression in spreads versus G-Sec from hereon and expect the curve movement to largely mirror G-sec movement.

RBI Actions: RBI policy scheduled in the first week of December

Though on the rate front the policy is likely to be a status-quo but the commentary relating to RBI view on the inflation trajectory is going to be crucial for market. RBI stance on Liquidity and any indication of an OMO calendar will be keenly watched for by the market.

Q2 GDP and Growth outlook – Current trends show signs of pickup

- Q2 GDP while contracted at 7.5% at a slower pace versus Q1 (which was at 23.9%). Overall, while growth is still in the negative territory, prospective signs are encouraging. Within this, while agriculture remains a bright spot showing a growth of 3.4% several sub-sectors within industry have begun to show growth such as electricity, manufacturing. Aggregate industry is also marginally positive. While services are still in contraction, the pace of contraction is lesser than Q1. Some high frequency indicators like PMI (recording its fourth consecutive month of expansion at 56.3), power demand, GST collections and railway freight also suggest recovery in growth. Overall, a combination of opening up of economy, resilience of the rural economy, favorable signs from the farm sector outlook, faster recovery in external demand and an accommodative monetary policy stance implies that the growth trend should remain on track for recovery.

Key rates (in %)	Current	Previous month
3M T-Bill	2.89	3.18
1Y G-Sec	3.33	3.47
3YG-Sec	4.35	4.40
5Y G-Sec	5.08	5.17
10Y G-sec	5.91	5.88
AAA 5Yr Corp Bond	5.41	5.45
AAA 10yr Corp Bond	6.46	6.42
USDINR	74.04	74.11
Brent Oil (USD Per Barrel)	48.18	37.65

Key Rates	Latest	3 Months Ago
Call Rate	3.40	3.50
Repo rate	4.00	4.00
1Y OIS	3.63	3.62
5Y OIS	4.44	4.32

Tax collections – Continue to remain tepid retaining the fiscal deficit overhang

- **GST collections:** October GST collections, expectedly, held up supported by normalization of economic activity and to an extent by pent-up and festive demand. Total GST collection for the month was at Rs1.05 trillion (1.4%yoy) which is flat versus September '20. However, Gross GST collections up to 8MFY21 were at Rs6.6 trillion still a significant contraction of 17.4% over 8MFY20.
- **Fiscal Deficit:** Despite improvement in GST, overall fiscal position still remains weak with Apr-Oct '20 fiscal deficit already reaching 119% of the target. Much of the fiscal slippage is due to lower revenues as expenditure is largely in-line. Overall, while pick up will only be gradual, overhang on the extent of fiscal deficit stretch will continue to remain.

Inflation Outlook: persistent reading of over 6% continues the unease; however, expect reversal in current trend

October '20, CPI Inflation came in at 7.6%, higher than market expectations by ~20 bps retaining the headline over 6%. The main spike being in vegetable prices and in pulses, while we saw sequential moderation across quite a few categories. Housing was another category which saw a surprise upward spike but this might be one-off. Within food, likes of cereal prices saw moderation. Core inflation inched up marginally to 5.7% from 5.6%, but that was mainly on the back of housing prices. India October '20 WPI rose to 1.48% v/s 1.3%, in line with expectations. Food WPI moderated to 6.4% v/s 8.2%, while core WPI rose to 1.7% v/s 1% in September '20. Going forward, while food inflation is expected to eventually cool down as lockdown related shocks ease considerably and subsequently with a healthy Rabi harvest, in the very near term we could continue to see elevated trends. In addition, as growth recovers, the pressure on inflation is likely to resurface.

External Factors – Oil and currency remain stable

- **Oil:** Oil prices have trended upwards during the month, crossing USD49/barrel levels during the month as positive news around vaccine developments brought back hopes of global recovery and optimism. From a low of 38.9 a barrel in the beginning of the month, oil prices steadily climbed upwards ending the month at 47.6. Continued price rise may soon add to the inflation pressures as the inflation is already over RBI's comfort range.
- **Currency:** INR moved with a strengthening bias with strong FII flows. However, RBI FX actions prevented any significant INR appreciation. November also saw very strong FII flows on the equity side with net flows of ~\$9.5bn while debt was marginally negative. RBI continues to build its FX reserves and has increased ~\$15bn during the month to reach \$575bn by the third week of November '20. These reserves act as a strong potential cushion against any currency volatility in future.

[^]Debt Allocation of 85% and 35% in respective indices represented by CRISIL Composite Bond Index.

[£] The equity component of the Index has been changed from Nifty 50 to S&P BSE - 200 and will be represented by Total Return variant of S&P BSE - 200 TRI.

[#] Monthly income is not assured and is subject to the availability of distributable surplus.

^{^^}The Macaulay duration is the weighted average term to maturity of the cash flows from a bond. The weight of each cash flow is determined by dividing the present value of the cash flow by the price.

Criteria for Large, Mid & Small companies - SEBI has demarcated the definitions of large cap, mid cap and small cap companies as given below.

Large Cap: 1st -100th company in terms of full market capitalization, Mid Cap: 101st -250th company in terms of full market capitalization, Small Cap: 251st company onwards in terms of full market capitalization of large/mid/small cap companies. A list of stocks as per above criteria will be uploaded on AMFI website and updated every six months by AMFI.

HSBC Large Cap Equity Fund

Large Cap Fund - An open ended equity scheme predominantly investing in large cap stocks.

Investment Objective: To generate long-term capital growth from an actively managed portfolio of equity and equity related securities of predominantly large cap companies. However, there can be no assurance or guarantee that the investment objective of the scheme would be achieved.

This product is suitable for investors who are seeking*:

- To create wealth over long term
- Investment in predominantly large cap equity and equity related securities

*Investors should consult their financial advisers if in doubt about whether the product is suitable for them.

Past performance may or may not be sustained in the future. Refer note below.

Pursuant to the circular issued by SEBI on 'Categorization and Rationalization of the Schemes', there has been change in the fundamental attribute(s) of the aforesaid scheme(s) effective from Mar 14, 2018.

¹The benchmark of the scheme has been changed from S&P BSE 200 TRI to NIFTY 500 TRI with effect from November 18, 2019.

The performance details provided herein are of other than Direct Plan - Growth Option. Returns on ₹10,000 are point-to-point returns for the specific time period, invested at the start of the period. The returns for the respective periods are provided as on last available NAV of November 2020 for the respective Schemes. Returns 1 year and Above are Compounded Annualised. Load is not taken into consideration for computation of performance. Different plans shall have a different expense structure. The expenses of the Direct Plan under the Scheme will be lower to the extent of the distribution expenses / commission charged to the Other than Direct Plan. The performance data of the scheme(s) managed by the respective Fund Manager which has/have not completed 1 year is not provided. Considering the varying maturities of the close ended schemes, the performance of close-ended schemes is not provided as it is strictly not comparable with that of open ended schemes.

Please Note : "NA" means not available.

Past performance may or may not be sustained in the future. Refer note below.

Pursuant to the circular issued by SEBI on 'Categorization and Rationalization of the Schemes', there has been change in the fundamental attribute(s) of the aforesaid scheme(s) effective from Mar 14, 2018.

¹The benchmark of the scheme has been changed from S&P BSE 200 TRI to NIFTY 500 TRI with effect from November 18, 2019.

²80% of S&P BSE 200 TRI Index and 20% of CRISIL Composite Bond Index

The performance details provided herein are of other than Direct Plan - Growth Option. Assuming ₹10,000 invested systematically on the first Business Day of every month over a period of time The returns for the respective periods are provided as on last available NAV of November 2020 for the respective Schemes. Returns 1 year and Above are Compounded Annualised. Load is not taken into consideration for computation of performance. Different plans shall have a different expense structure. The expenses of the Direct Plan under the Scheme will be lower to the extent of the distribution expenses / commission charged to the Other than Direct Plan. The performance data of the scheme(s) managed by the respective Fund Manager which has/have not completed 1 year is not provided. Considering the varying maturities of the close ended schemes, the performance of close-ended schemes is not provided as it is strictly not comparable with that of open ended schemes.

Please Note : "NA" means not available.

Past performance may or may not be sustained in the future. Refer note below.

Pursuant to the circular issued by SEBI on 'Categorization and Rationalization of the Schemes, there has been change in the fundamental attribute(s) of the aforesaid effective from Mar 14, 2018.

¹Composite index of S&P BSE 200 TRI (10%) and CRISIL Composite Bond Fund Index (90%).

²Composite index of S&P BSE 200 TRI (70%) and CRISIL Composite Bond Fund Index (30%).

The performance details provided herein are of other than Direct Plan - Growth Option. Assuming ₹10,000 invested systematically on the first Business Day of every month over a period of time The returns for the respective periods are provided as on last available NAV of November 2020 for the respective Schemes. Returns 1 year and Above are Compounded Annualised. Load is not taken into consideration for computation of performance. Different plans shall have a different expense structure. The expenses of the Direct Plan under the Scheme will be lower to the extent of the distribution expenses / commission charged to the Other than Direct Plan. The performance data of the scheme(s) managed by the respective Fund Manager which has/have not completed 1 year is not provided. Considering the varying maturities of the close ended schemes, the performance of close-ended schemes is not provided as it is strictly not comparable with that of open ended schemes.

The Fund offers flexible and convenient Systematic Investment Plan (SIP) facility. To illustrate the advantages of SIP investments, this is how your investments would have grown if you had invested say ₹10,000 systematically on the first Business Day of every month over a period of time in the Growth Option of Respective Scheme. The returns are calculated by XIRR approach assuming investment of ₹10,000/- on the 1st working day of every month. XIRR helps in calculating return on investments given an initial and final value and a series of cash inflows and outflows with correct allowance for the time impact of the transactions.

Past performance may or may not be sustained in the future. Refer note below.

Pursuant to the circular issued by SEBI on 'Categorization and Rationalization of the Schemes', there has been change in the fundamental attribute(s) of the aforesaid scheme(s) effective from Mar 14, 2018.

The performance details provided herein are of other than Direct Plan - Growth Option. Returns on ₹10,000 are point-to-point returns for the specific time period, invested at the start of the period. The returns for the respective periods are provided as on last available NAV of November 2020 for the respective Schemes. Returns 1 year and Above are Compounded Annualised. Load is not taken into consideration for computation of performance. Different plans shall have a different expense structure. The expenses of the Direct Plan under the Scheme will be lower to the extent of the distribution expenses / commission charged to the Other than Direct Plan. The performance data of the scheme(s) managed by the respective Fund Manager which has/have not completed 1 year is not provided. Considering the varying maturities of the close ended schemes, the performance of close-ended schemes is not provided as it is strictly not comparable with that of open ended schemes.

Past performance may or may not be sustained in the future. Refer note below.

Pursuant to the circular issued by SEBI on 'Categorization and Rationalization of the Schemes, there has been change in the fundamental attribute(s) of the aforesaid scheme(s) effective Mar 14, 2018.

¹Pursuant to SEBI circular dated Sept 13, 2012, certain Plans / Options within the schemes have been discontinued to comply with a single plan structure. Since there was no continuous NAV history available for the surviving Plan prior to 1 October 2012, returns since the said date have been considered for calculating performance. The inception date of HSBC Low Duration Fund however is 17 October 2006.

²Pursuant to SEBI circular dated Sept 13, 2012, certain Plans / Options within the schemes have been discontinued to comply with a single plan structure. Since there was no continuous NAV history available for the surviving Plan prior to 19 May 2011, returns since the said date have been considered for calculating performance. The inception date of HSBC Cash Fund however is 4 December 2002.

³The said fund has been in existence for more than 1 year but less than 3 years.

The Performance of HSBC Ultra Short Duration Fund (managed by Kapil Punjabi) is not given since the scheme has not completed one year from the date of inception.

The Performance of HSBC Corporate Bond Fund (managed by Ritesh Jain) is not given since the scheme has not completed one year from the date of inception.

The performance details provided herein are of other than Direct Plan - Growth Option. Returns on ₹10,000 are point-to-point returns for the specific time period, invested at the start of the period. The returns for the respective periods are provided as on last available NAV of November 2020 for the respective Schemes. Returns 1 year and Above are Compounded Annualised. Load is not taken into consideration for computation of performance. Different plans shall have a different expense structure. The expenses of the Direct Plan under the Scheme will be lower to the extent of the distribution expenses / commission charged to the Other than Direct Plan. Considering the varying maturities of the close ended schemes, the performance of close-ended schemes is not provided as it is strictly not comparable with that of open ended schemes.

Section II - How to read Factsheet

Application Amount for Fresh Subscription

This is the minimum investment amount for a new investor in a mutual fund scheme,

AUM

AUM or Assets Under Management refers to the recent updated cumulative market value of investments managed by a mutual fund or any investment firm.

Benchmark

A group of securities, usually a market index, whose performance is used as a standard or benchmark to measure investment performance of mutual funds, among other investments. Some typical benchmarks include the Nifty, Sensex, BSE200, BSE500, 10-Year Gsec.

Beta

Beta is a measure of an investment's volatility vis-a-vis the market. Beta of less than 1 means that the security will be less volatile than the market. A beta of greater than 1 implies that the security's price will be more volatile than the market.

Exit Load

Exit load is charged at the time an investor redeems the units of a mutual fund. The exit load is deducted from the prevailing NAV at the time of redemption. For instance, if the NAV is Rs 100 and the exit load is 1%, the redemption price would be ₹99 per unit.

Entry Load

A mutual fund may have a sales charge or load at the time of entry and/or exit to compensate the distributor/agent. Entry load is charged at the time an investor purchases the units of a mutual fund. The entry load is added to the prevailing NAV at the time of investment. For instance, if the NAV is ₹100 and the entry load is 1%, the investor will enter the fund at ₹101.

Note: SEBI, vide circular dated June 30, 2009 has abolished entry load and mandated that the upfront commission to distributors will be paid by the investor directly to the distributor, based on his assessment of various factors including the services rendered by the distributor.

Fund Manager

An employee of the asset management company such as a mutual fund or life insurer, who manages investments of the scheme. He is usually part of a larger team of fund managers and research analysts.

Holdings

The holdings or the portfolio is a mutual fund's latest or updated reported statement of investments/securities. These are usually displayed in terms of percentage to net assets or the rupee value or both. The objective is to give investors an idea of where their money is being invested by the fund manager.

Minimum Additional Amount

This is the minimum investment amount for an existing investor in a mutual fund scheme.

Modified Duration

Modified duration is the price sensitivity and the percentage change in price for a unit change in yield.

NAV

The NAV or the Net Asset Value is the total asset value per unit of the mutual fund after deducting all related and permissible expenses. The NAV is calculated at the end of every business day. It is the value at which the investor enters or exits the mutual fund.

Nature of Scheme

The investment objective and underlying investments determine the nature of the mutual fund scheme. For instance, a mutual fund that aims at generating capital appreciation by investing in stock markets is an equity fund or growth fund. Likewise, a mutual fund that aims at capital preservation by investing in debt markets is a debt fund or income fund. Each of these categories may have sub-categories.

Rating Profile

Mutual funds invest in securities after evaluating their creditworthiness as disclosed by the ratings. A depiction of the mutual fund in various investments based on their ratings becomes the rating profile of the fund. Typically, this is a feature of debt funds.

Sharpe Ratio

The Sharpe Ratio, named after its founder, the Nobel Laureate William Sharpe, is a measure of risk-adjusted returns. It is calculated using standard deviation and excess return to determine reward per unit of risk.

SIP

SIP or Systematic Investment Plan works on the principle of making periodic investments of a fixed sum. It works similar to a recurring bank deposit. For instance, an investor may opt for an SIP that invests ₹500 every 15th of the month in an equity fund for a period of three years.

Standard Deviation

Standard deviation is a statistical measure of the range of an investment's performance. When a mutual fund has a high standard deviation, it means its range of performance is wide, implying greater volatility.

Yield to Maturity

The Yield to Maturity or the YTM is the rate of return anticipated on a bond if held until maturity. YTM is expressed as an annual rate. The YTM factors in the bond's current market price, par value, coupon interest rate and time to maturity.
