Refer Section II for more details.

C. WHAT ARE THE INVESTMENT STRATEGIES?

Investment Approach and Risk Control

The Scheme is a target maturity index fund which will employ an investment approach designed to track the performance of CRISIL- IBX Gilt Index - June 2027. The scheme would seek to replicate the underlying index in the manner as specified under para 3.5 of SEBI Master Circular on Mutual Funds dated June 27, 2024 as amended from time to time. Where the scheme is not able to replicate the underlying index, the scheme would adhere to the requirements stipulated in para 3.5 of SEBI Master Circular on Mutual Funds dated June 27, 2024 and other SEBI Guidelines/Circulars issued from time to time.

The Scheme will follow Buy & Hold investment strategy in which existing securities will be held till maturity unless sold for meeting redemptions, payment of IDCW, rebalancing requirement or optimizing portfolio construction process.

The underlying index shall comply with the restrictions in line with para 3.6.3 of the SEBI Master Circular dated June 27, 2024.

Tracking Error

Tracking error is defined as the annualized standard deviation of the difference in daily returns between the underlying index and the NAV of the Scheme. Theoretically, the corpus of the Scheme has to be fully invested in the securities so as to replicate the underlying Index in the same proportion of weights as the securities have in the underlying Index. However, deviations from the stated Index replication may occur due to reason that the Scheme has to incur expenses, corporate actions, regulatory policies which may affect AMC's ability to achieve close correlation with the underlying Index of the Scheme, delay in purchase or non-availability of underlying securities forming part of the Index, etc. Tracking Error may arise due to the following reasons:

1. Delay in purchase or non-availability of underlying securities forming part of the Index.
2. Delay in liquidation of securities which have been removed from the Index.
3. Difference in valuation of underlying securities by the Index provider and AMC's valuation providers.
4. Fees and expenses of the Scheme.
5. Cash balance held by the Scheme due to coupon flows, redemption, etc.
6. Halt in trading.
7. Corporate actions.
8. The Scheme has to invest in the securities in whole numbers and has to round off the quantity of securities.
9. Interest/Dividend Payout.
10. Changes in the constituents of the underlying Index. Whenever there are any changes, the Scheme has to reallocate its investment as per the revised Index but market conditions may not offer an opportunity to rebalance its portfolio to match the Index and such delay may affect the NAV of the Scheme.

The AMC would monitor the tracking error of the Scheme on an ongoing basis and would seek to minimize tracking error to the maximum extent possible. Under normal market circumstances, the tracking error based on past one year rolling data shall not exceed 2%. In case of unavoidable circumstances in the nature of force majeure, which are beyond the control of the AMC, the tracking error may exceed 2% and the same shall be brought to the notice of the Board of Directors of Trustee Company with corrective actions taken by the AMC, if any. There can be no assurance or guarantee that the Scheme will achieve any particular level of tracking error relative to performance of the underlying Index.

The Scheme shall disclose the tracking error based on past one year rolling data, on a daily basis, on the website of the AMC and AMFI.

Tracking Difference

Along with tracking error, tracking difference i.e. the annualized difference of daily returns between the index and the NAV of the Scheme shall also be disclosed on the website of the AMC and AMFI, on a monthly basis, for tenures 1 year, 3 years, 5 years, 10 year and since the date of allotment of units.

Further, the annualized tracking difference averaged over one year period shall not exceed 1.25%. In case the average annualized tracking difference over one year period for the Scheme is higher than 1.25%, the same shall be brought to the notice of the Board of Directors of Trustee Company with corrective actions taken by the AMC, if any.

D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

Benchmark Index (i.e. First Tier Benchmark based on the PRC):

The performance of the Scheme will be benchmarked against CRISIL-IBX Gilt Index - June 2027.

Justification for benchmark

The Scheme will invest in the constituents of CRISIL-IBX Gilt Index - June 2027. Therefore, the composition of CRISIL-IBX Gilt Index - June 2027 makes it most suited to compare the performance of the Scheme.

PART III - OTHER DETAILS

A. COMPUTATION OF NAV

i. Computation of NAV

The NAV of Units under the Scheme/Plan(s)/Option(s) shall be calculated as shown below:

$$\text{NAV (Rs.)} = \frac{\text{Market or Fair Value of Scheme's investments (+)} \\ \text{Current Assets (-) Current Liabilities and Provisions}}{\text{No. of Units outstanding under the Scheme/Option}}$$

The Direct Plan shall have a separate NAV.

The NAVs of the Scheme/Plan(s)/Option(s) (including Direct Plans) will be calculated and disclosed on every Business Day. The NAVs of the Scheme shall be disclosed up to 4 decimal places. The valuation of the Scheme's assets and calculation of the Scheme's NAV shall be subject to audit on an annual basis and such regulations as may be prescribed by SEBI from time to time.

The NAV of the Segregated Portfolio shall be declared on daily basis.

For other details such as policies w.r.t computation of NAV, rounding off, investment in foreign securities, procedure in case of delay in disclosure of NAV etc. refer to SAI.

ii. Methodology for calculation of sale and re-purchase of units –

The Units of the Scheme are available for sale, repurchase and switch at applicable NAV based prices, subject to prevalent load provisions, if any, on every business day.

Sale Price

Sale Price = Applicable NAV Example

If the Applicable NAV is Rs. 15 and the sales load (i.e. Entry Load) is 0%, the sales price is calculated as follows:

$$\text{Sales Price} = 15 * (1 + 0)$$

$$= 15 * 1$$

$$= 15^{\wedge}$$

([^]Pursuant to levy of stamp duty, the number of units allotted on the sale price to the unitholders would be reduced to that extent of @0.005% of the transaction value. Please refer for more details under “Section III → Other Details → C. TRANSACTION CHARGES AND STAMP DUTY” clause of this document.)

Repurchase Price

Repurchase Price = Applicable NAV * (1 - Exit Load, if any) Example

If the Applicable NAV is Rs. 15 and the exit load applicable is 0.5%, the repurchase price is calculated as follows:

$$\text{Repurchase Price} = 15 * (1 - 0.005)$$

$$= 15 * 0.995$$

$$= 14.925$$

The repurchase price however, will not be lower than 95% of the NAV subject to SEBI Regulations as amended from time to time.

For other details such as policies w.r.t computation of NAV, rounding off, investment in foreign securities, procedure in case of delay in disclosure of NAV etc. refer to SAI.

B. RISK FACTORS

Scheme specific risk factors

- **Tracking Error/Tracking Difference Risk:** The Fund Manager may not be able to invest the entire corpus exactly in the same proportion as in the underlying index due to certain factors including but not limited to lot size constraints in bond markets, portfolio liquidity considerations, transaction costs, fees and expenses of the scheme, corporate actions, cash balance, changes to the underlying index, difference in valuation of underlying securities by the index provider and AMC’s valuation providers and regulatory policies which may affect AMC’s ability to achieve close correlation with the underlying index of the scheme. The scheme’s returns may therefore deviate from those of its underlying index. It will be the endeavour of the fund manager to keep the tracking error/tracking difference as low as possible. However, in case of events like, reconstitution/addition/deletion of securities in the underlying index etc. or in abnormal market circumstances, the tracking error may rise. There can be no assurance or guarantee that the Scheme will achieve any particular level of tracking error/tracking difference relative to performance of the Index.
- **Concentration Risk:** The Scheme shall predominantly invest in G-secs and hence may have limited or no diversification to any other types of fixed income securities within its portfolio. This could have implications on the performance of the scheme. The Scheme may be more sensitive to economic, business, political or other changes that may directly impact G-sec spreads etc. and this may lead to considerable fluctuation in the Net Asset Value of the scheme.

Risk factors associated with investing in Fixed Income Securities

Subject to the stated investment objective, the Scheme proposes to invest in debt and related instruments and the risk factors pertinent to the same are:

- The performance of Scheme may be affected by changes in Government policies, general levels of interest rates and risks associated with trading volumes, liquidity and settlement systems.
- Investments in different types of securities are subject to different levels and kinds of risk. Accordingly, the Scheme’s risk may increase or decrease depending upon its investment pattern.

E.g. investments in corporate bonds carry a higher level of risk than investments in Government securities. Further, even among corporate bonds, bonds which have a higher rating are comparatively less risky than bonds which have a lower rating.

- **Price-Risk or Interest Rate Risk:** As with all debt securities, changes in interest rates may affect the NAV of the Scheme as the prices of securities increase as interest rates decline and decrease as interest rates rise. Prices of long-term securities generally fluctuate more in response to interest rate changes than do short term securities. Indian debt markets can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby to possible movements in the NAV.
- The change in value of a security, for a given change in yield, is higher for a security with higher duration and vice versa. Hence portfolios with higher duration will have higher volatility which leads to duration risk.
- Government securities do carry price risk depending upon the general level of interest rates prevailing from time to time. The extent of fall or rise in the prices is a function of the coupon rate, days to maturity and the increase or decrease in

the level of interest rates. The price of the Government securities (existing and new) is influenced only by movements in interest rates in financial systems.

- In the case of floating rate instruments, an additional risk could be due to the change in the spreads of floating rate instruments. If the spreads on floating rate papers rise, then there could be a price loss on these instruments. Secondly in the case of fixed rate instruments that have been swapped for floating rates, any adverse movement in the fixed rate yields vis-à-vis swap rates could result in losses. However, floating rate debt instruments which have periodical interest rate reset, carry a lower interest rate risk as compared to fixed rate debt instruments. In a falling interest rate scenario, the returns on floating rate debt instruments may not be better than those on fixed rate debt instruments. In case of a floating rate instrument, this risk is lower as a result of periodic reset of the coupon. During the life of floating rate security or a swap the underlying benchmark index may become less active and may not capture the actual movement in the interest rates or at times the benchmark may cease to exist. These types of events may result in loss of value in the portfolio.

Liquidity Risk: This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is today characteristic of the Indian fixed income market.

This represents the possibility that the realised price from selling the security might be lesser than the valuation price as a result of illiquid market. If a large outflow from the Scheme is funded by selling some of the illiquid securities, the NAV could fall even if there is no change in interest rates. Illiquid securities are typically quoted at a higher yield than the liquid securities and have higher bid offer spreads. Investment in illiquid securities results in higher current yield for the portfolio. In addition, money market securities, while fairly liquid, lack a well- developed secondary market, which may restrict the selling ability of the Scheme and may lead to the Scheme incurring losses till the security is finally sold.

The corporate debt market is relatively illiquid vis-a-vis the government securities market. Even though the government securities market is more liquid compared to that of other debt instruments, on occasions, there could be difficulties in transacting in the market due to extreme volatility or unusual constriction in market volumes or on occasions when an unusually large transaction has to be put through.

Liquidity Risk for all Open-Ended Debt Schemes is measured and addressed through the below mentioned liquidity management tools.

Liquidity Management Tools	Brief Description
Potential Risk Matrix (PRC) and Risk-o-meter (RoM)	All debt schemes are bucketed in terms of Potential Risk Class matrix (PRC) based on maximum interest rate risk and credit risk parameters. PRC defines the maximum risk that a scheme will run as per design and RoM is the measurement of that risk on a regular basis. Remedial measures are in place in case any of the design boundaries are breached.
Maintenance of minimum liquid assets in all open ended debt schemes and monitoring liquid assets through LRRaR and LR-CRaR framework provided by AMFI.	All open ended debt schemes (except Overnight fund, Liquid fund, Gilt fund and Gilt Fund with 10-year constant duration) shall hold at least 10% of their net assets in liquid assets or liquidity ratio computed basis LR-RaR and LR-CRaR, whichever is higher. Similarly, liquid funds shall comply with the requirement of maintaining liquid assets at 20% of their net assets or liquidity ratio computed basis LR-RaR and LR-CRaR, whichever is higher. The Liquidity Risk Management framework defines the Liquidity Risk arising from liability side of the portfolio and covers all potential liquidity risk scenarios upto 99% confidence interval. The AMC measures and monitors liquidity risk on a monthly basis and has laid down action plan in case there is difference between actual outcome and projected outcome.
Stress Testing	Stress Testing is carried out for all open ended debt schemes (except overnight scheme) on a monthly basis as required by SEBI. The stress testing addresses the asset side risk taking into account the Interest Rate risk, Credit risk and Liquidity risk at an aggregate portfolio level and its impact on NAV. This asset side stress testing complements the liability side stress testing conducted through LR-RaR and CR-CRaR framework. The result of Stress Testing is reported to AMFI, Board of AMC and Trustee Company on an ongoing basis.
Asset Liability Management	Asset Liability Management covers monitoring of liquidity risk addressing asset liability mismatch upto a period of 90 days. The 90-day liability ratio is calculated taking into account investor behavior based on size of their investments and historic redemptions at an industry level. The 90-day liability ratio is compared with the Portfolio Liquidity ratio to ascertain if any asset liability mismatch exists.
Borrowing	A fund may borrow to meet redemption requirements up to the limit allowed by the regulator from time to time

- **Credit Risk:** Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e. will be unable to make timely principal and interest payments on the security). A sovereign security carries no default risk since Government raises money to meet its capital and revenue expenditure by issuing these debt or discounted securities. As the payment of interest and principal amount has a sovereign status implying no default, such securities are popularly known as “risk-free security” or “Zero Risk security”. Thus Zero-Risk is the lowest risk, even lower than a security with “AAA” rating and hence commands a yield, which is lower than a yield on “AAA” security. Normally, the value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit risk as well as any actual event of default. The greater the credit risk, the greater the yield required for someone to be compensated for the increased risk. Because of this risk, corporate debentures are sold at a yield above those offered on Government Securities, which are sovereign obligations.
- **Reinvestment Risk:** This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the “interest on interest” component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed. However, declining interest rates normally lead to increase in bond prices which may help cushion the impact of reinvestment risk to some extent.
- **Benchmark Risk:** The floating rate segment of the domestic debt market is not very developed. Currently, majority of the issuance of floating rate papers is linked to NSE MIBOR. As the floating rate segment develops further, more benchmark rates for floating papers may be available in future. The fewer number of benchmark rates could result in limited diversification of the benchmark risk.
- **Prepayment Risk:** The risk associated with the early unscheduled return of principal on a fixed- income security. The early unscheduled return of principal may result in reinvestment risk.
- **Spread risk:** Though the sovereign yield curve might remain constant, investments in corporate bonds are exposed to the risk of spread widening between corporate bonds and gilts. Typically, if this spread widens, the prices of the corporate bonds tend to fall and so could the NAV of the Schemes. Similar risk prevails for the investments in the floating rate bonds, where the benchmark might remain unchanged, but the spread over the benchmark might vary. In such an event, if the spread widens, the price and the NAV of the Schemes could fall.
- **Settlement risk:** Different segments of Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Scheme are uninvested and no return is earned thereon. The inability of the Scheme to make intended securities purchases, due to settlement problems, could cause the Scheme, to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme’s portfolio, due to the absence of a well-developed and liquid secondary market for debt securities, may result at times in potential losses to the Scheme in the event of a subsequent decline in the value of securities held in the portfolio of the Scheme.
- **Market risk:** Lower rated or unrated securities are more likely to react to developments affecting the market and the credit risk than the highly rated securities which react primarily to movements in the general level of interest rates. Lower rated or unrated securities also tend to be more sensitive to economic conditions than higher rated securities.
- In addition to the factors that affect the values of securities, the NAV of Units of the Scheme will fluctuate with the movement in the broader fixed income market, money market and derivatives market and may be influenced by factors influencing such markets in general including but not limited to economic conditions, changes in interest rates, price and volume volatility in the bond and stock markets, changes in taxation, currency exchange rates, foreign investments, political, economic or other developments and closure of the stock exchanges.

Risk Factors associated with investments in Money Market instruments

- Investments in money market instruments would involve a moderate credit risk i.e. risk of an issuer’s liability to meet the principal payments.
- Money market instruments may also be subject to price volatility due to factors such as changes in interest rates, general level of market liquidity and market perception of credit worthiness of the issuer of such instruments.
- The NAV of the Scheme’s Units, to the extent that the corpus of the Scheme is invested in money market instruments, will be affected by the changes in the level of interest rates. When interest rates in the market rise, the value of a portfolio of money market instruments can be expected to decline.

Risk factors associated with Swing Pricing

This Scheme will enable Swing Pricing and this will be triggered during period of market dislocations as declared by SEBI. Swing price is enable to protect interests of remaining investors during periods of significant inflows and outflows. While swing pricing will be effected only during market dislocations and net outflows from the scheme, transacting during such periods may result in subscriptions/redemptions effected at a NAV adjusted for the swing price.

Passive Investments

The Scheme is a passively managed scheme The Scheme shall endeavor to invest in the securities included in its underlying Index regardless of their investment merit. The Scheme may be adversely impacted by a general decline in the Indian markets

relating to its underlying Index. The AMC will not attempt to individually select securities or to take defensive positions in declining markets.

Risks associated with transaction in Units through Stock Exchange mechanism

In respect of transactions in Units of the Scheme routed through the BSE StAR MF platform or any other recognised stock exchange platform as intimated by the AMC, allotment and redemption of Units on any Business Day will depend upon the order processing/settlement by BSE, or such other exchange and their respective clearing corporations on which the Fund has no control. Further, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by BSE or such other recognised exchange in this regard.

Risk factor associated with legal, tax and regulatory risk

The Scheme could be exposed to changes in legal, tax and regulatory regime which may adversely affect it and/or the investors. Such changes could also have retrospective effect and could lead to additional taxation imposed on the Schemes which was not contemplated either when investments were made, valued or disposed off.

Risks associated with Segregated Portfolio

Liquidity risk - Segregated Portfolio is created to separate debt and money market instruments affected by a Credit Event from the Main Portfolio of the Scheme. The Fund will not permit redemption of the Segregated Portfolio units, but the units will be listed on a recognized stock exchange. The Fund is not assuring any liquidity of such units on the stock exchange. Further, trading price of units on the stock exchange may be significantly lower than the prevailing NAV. Investors can continue to transact (subscribe/redeem) from the Main Portfolio.

Credit risk - While the AMC will put in sincere efforts to recover the securities in the Segregated Portfolio and distribute the same to unit holders, it is likely that such securities may not realize any value leading to losses to investors.

C. RISK MITIGATION STRATEGIES

The Fund by utilizing a holistic risk management strategy will endeavor to manage risks associated with investing in debt, and equity instruments. The risk control process involves identifying & measuring the risk process involves identifying & measuring the risk through various risk measurement tools.

Risks & Description	Risk Mitigants/Management Strategy
Market Risk : Value of holdings may fall as a result of market movements	Investment approach supported by comprehensive research
Liquidity Risk : High impact costs	Robust process for periodic monitoring of liquidity
Concentration Risk : Risk on account of high exposure to a risk class	Investment across industries/sectors
Legal/Tax/Regulatory Risk : Risk on account of changes in regulations	This risk is dependent upon a future event and will be clearly communicated to the investor. Comprehensive documentation including disclosures and disclaimers.
Event Risk : Price risk as a result of company or sector specific event	Usage of derivatives to hedge portfolios if required, in case of predictable events.
Valuation Risk : Risk on account of incorrect valuation	Valuation as per guidelines of Pricing and Valuation policy. Usage of third party valuation agent
Interest Rate Risk : Value of holdings may fall as a result of movements in interest rate	Determination of duration bands based on extensive macro-economic analysis.
Credit Risk: inability of the issuer to make timely principal and interest payments on the security	Internal Credit assessment to determine the repayment capabilities of the issuer with a reduced reliance on external ratings

 - ISTs shall be permitted only if other resources such as cash and cash equivalent, market borrowing, and selling securities in the market are exhausted.

Further, such investments shall be made with the prior approval of the Board of AMC and the Trustee Company and exposure of the Scheme in such instruments shall not exceed 5% of the net assets of the Scheme.

Procedure followed for Investment Decisions

The Fund Manager of the Scheme is responsible for making buy/sell decisions in respect of the securities in the Scheme's portfolio and to develop a well-diversified portfolio that minimizes liquidity and credit risk. The investment decisions are made keeping in view the market conditions and all relevant aspects.

The Board of the AMC has constituted an Investment Management Committee that meets at periodic intervals. The Investment Management Committee, at its meetings, reviews investments, including investments in unrated debt instruments. The approval of unrated debt instruments is based on parameters laid down by the Board of the AMC and the Trustee Company. The details of such investments are communicated by the AMC to the Board of Directors of Trustee Company in their periodical reports along with a disclosure regarding how the parameters have been complied with. Such reportings shall be in the manner prescribed by SEBI from time to time. The Committee also reviews the performance of the Scheme and general market outlook and formulates the broad investment strategy at their meetings.

It is the responsibility of the AMC to ensure that the investments are made as per the internal/Regulatory guidelines, Scheme investment objectives and in the best interest of the Unitholders of the Scheme. The Fund may follow internal guidelines as approved by the Board of the AMC and the Trustee Company from time to time.

The Chief Investment Officer and Fund Manager - Fixed Income present to the Board of the AMC and the Trustee Company periodically, the performance of the Scheme. The performance of the Scheme will be reviewed by the Boards with reference to its benchmark(s).

However, the Schemes' performance may not be strictly comparable with the performance of its Index due to the inherent differences in the construction of the portfolios. The Boards may review the benchmark selection process from time to time

and make suitable changes as to use of the benchmark, or related to composition of the benchmark, whenever it deems necessary.

The Chief Investment Officer and Fund Manager – Fixed Income will bring to the notice of the AMC Board, specific factors if any, which are impacting the performance of the Scheme. The Board on consideration of all relevant factors may, if necessary, give appropriate directions to the AMC. Similarly, the performance of the Scheme will be submitted to the Board of Directors of Trustee Company. The details on the Schemes’ performance vis-à-vis the benchmark returns will be explained to the Board of Directors of Trustee Company.

The AMC will keep a record of all investment decisions.

Position of Debt Markets in India

The major players in the Indian debt markets today are banks, financial institutions, insurance companies and mutual funds. The instruments in the market can be broadly authorized as those issued by corporates, banks, financial institutions and those issued by state/central governments. The risks associated with any investment are – credit risk, interest rate risk and liquidity risk. While corporate papers carry credit risk due to changing business conditions, government securities are perceived to have zero credit risk. Interest rate risk is present in all debt securities and depends on a variety of macroeconomic factors. The liquidity risk in the corporate securities market is higher as compared to that in case of government securities. Liquidity in the corporate debt market has been improving due to the entry of more players and due to various measures taken by the regulators in this direction over a period of time. SEBI’s directive of a compulsory rating by a rating agency for any public issuance over 18 months, authorized on, entry of private insurance companies, listing of debt securities and growth of fixed income mutual funds have enhanced liquidity in the corporate debt market. The setting up of clearing corporations, real time gross settlement and electronic clearing system for government securities have considerably enhanced the depth and width of the Indian debt markets and bringing it at par with developed markets.

The following table attempts to give a broad overview of the available instruments in the financial markets and their risk – return profile. The data is based on the market conditions as on the date of the Offer Document and may vary substantially depending upon the factors and forces affecting the securities market including the fluctuations in the interest rates.

Disclosure on internal norms w.r.t. exposure limits:

HSBC Holdings plc, the ultimate parent company of the AMC, is regulated by the Federal Reserve in the United States as a Financial Holding Company ("FHC") under "The U.S. Bank Holding Company Act of 1956" (including rules and regulations), as amended from time to time (the "BHCA"). As FHC, the activities of HSBC Holdings plc and its affiliates are subject

to certain restrictions imposed by the BHCA. These restrictions may limit the Scheme’s ability to purchase or hold certain investments. There can be no assurance that the regulatory requirements applicable to HSBC Group including AMC will not change, or that any such change will not have any material adverse effect on the investments or performance of the Schemes.

C. FUNDAMENTAL ATTRIBUTES

Following are the Fundamental Attributes of the scheme, in terms of Clause 1.14 of SEBI Master Circular for Mutual Funds dated June 27, 2024:

(i) Type of a scheme:

- An open-ended Target Maturity Index Fund tracking CRISIL- IBX Gilt Index - June 2027. A Relatively high interest rate risk and relatively low credit risk.
- Index Fund

(ii) Investment Objective

Main Objective - The investment objective of the Scheme is to provide returns corresponding to the total returns of the securities as represented by the CRISIL-IBX Gilt Index - June 2027 before expenses, subject to tracking errors. However, there is no assurance that the investment objective of the Scheme will be achieved.

Investment pattern - The tentative portfolio break-up of Equity/Debt/Money Market instruments, other permitted securities and such other securities as may be permitted by SEBI from time to time with minimum and maximum asset allocation, while retaining the option to alter the asset allocation for a short term period on defensive considerations. Refer Part II – Information about the scheme – A. How will the scheme allocate its assets? for more details.

Potential Risk Class			
Credit Risk →	Relatively Low (Class A)	Moderate (Class B)	Relatively High (Class C)
Interest Rate Risk ↓			
Relatively Low (Class I)			
Moderate (Class II)			
Relatively High (Class III)	A-III		
A relatively high interest rate risk and relatively low credit risk.			

Potential Risk Class (‘PRC’) matrix indicates the maximum interest rate risk (measured by Macaulay Duration of the scheme) and maximum credit risk (measured by Credit Risk Value of the scheme) the fund manager can take in the scheme. PRC matrix classification is done in accordance with and subject to the methodology/ guidelines prescribed by SEBI to help investors take informed decision based on the maximum interest rate risk and maximum credit risk the fund manager can take in the scheme, as depicted in the PRC matrix.

The Scheme would have the flexibility to move downwards on the risk scale.
