SEBI/HO/IM/DF3/CIR/P/2017/114 dated October 4 2017 and as may be amended by SEBI from time to time and updated on half yearly basis. The Scheme will endeavor to achieve this by maintaining a minimum of 65% allocation to equity and equity related securities.

	As per the asset allocation pattern indicated above, for investment in debt securities and money market instruments, the Scheme may invest a part of its portfolio in various debt securities issued by corporates and/or state and central government. Such government securities may include securities which are supported by the ability to borrow from the treasury or supported only by the sovereign guarantee or of the state government or supported by GOI/state government in some other way. With the aim of controlling risks, rigorous in depth credit evaluation of the instruments proposed to be invested in will be carried out by the Investment Team of the AMC. The credit evaluation includes a study of the operating environment of the company, the past track record as well as the future prospects of the issuer, the short as well as long-term financial health of the issuer. The AMC will also be guided by the ratings of rating agencies such as CRISIL, CARE and ICRA or any other rating agency as approved by the regulators. The Scheme may invest in other Scheme(s) managed by the AMC or in the schemes of any other mutual fund, provided it is in conformity with the investment objectives of the Scheme and in terms of the prevailing Regulations. As per the Regulations, no investment management fees will be charged for such investments. Since investing requires disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio
Risk Profile	Mutual Fund Units involve investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment. Scheme specific Risk Factors are summarized below:
	Scheme will invest in a concentrated portfolio of equity & equity related instruments of up to 30 companies across market capitalization. These factors may impede the ability of the fund manager to align the portfolio in line with market expectations potentially exposing the Scheme to periods of volatile performance.
	Risk factors associated with investing in Equity or Equity related Securities:
	Subject to the stated investment objective of the Scheme, the Scheme proposes to invest predominantly in equity and equity related securities. Equity instruments by nature are volatile and prone to price fluctuations on a daily basis due to both macro and micro factors. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of these investments. Different segments of financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities' purchases due to settlement problems could cause the Scheme to miss certain investment opportunities.
	The Scheme may also use various derivative products from time to time, as would be available and permitted by SEBI, in an attempt to protect the value of the portfolio and enhance Unit holders' interest.
	Liquidity risk can be defined as inability of the fund manager to exit securities at their fair value in the secondary market whenever there is a need to generate cash. Equity and equity related instruments are subject to liquidity risk. Liquidity risk is generally observed to be elevated in mid and small cap stocks than in large cap stocks. The scheme may have exposure to mid and small cap stocks which usually have a higher impact cost. HSBC monitors liquidity risk on an ongoing basis for both assets and liability side.
	Risk factor associated with legal, tax and regulatory risk
	The Schemes could be exposed to changes in legal, tax and regulatory regime which may adversely affect it and/or the investors. Such changes could also have retrospective effect and could lead to additional taxation imposed on the Schemes which was not contemplated either when investments were made, valued or disposed off.
	Risk factors associated with investing in Fixed Income Securities:
	Subject to the stated investment objective, the Scheme propose to invest in debt and related instruments and the risk factors pertinent to the same are:
	• Price-Risk or Interest Rate Risk: As with all debt securities, changes in interest rates may affect the NAV of the Scheme as the prices of securities increase as interest rates decline and decrease as interest rates rise. Prices of long-term securities generally fluctuate more in response to interest rate changes than do short-term securities. Indian debt markets can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby to possible movements in the NAV.
	In the case of floating rate instruments, an additional risk could be due to the change in the spreads of floating rate instruments. If the spreads on floating rate papers rise, then there could be a price loss on these instruments. Secondly in the case of fixed rate instruments that have been swapped for floating rates, any adverse movement in the fixed rate yields vis-à-vis swap rates could result in losses. However, floating rate debt instruments which have periodical interest rate reset, carry a lower interest rate risk as compared to fixed rate debt instruments. In a falling interest rate scenario the returns on floating rate debt instruments may not be better than those on fixed rate debt instruments.
	 Liquidity or Marketability Risk: This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is today characteristic of the Indian fixed income market. HSBC monitor liquidity risk on an ongoing basis from both assets and liability side. HSBC AMC conducts stress testing of all open ended funds as per Regulatory guidelines on monthly basis.
	 Credit Risk: Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e. will be unable to make timely principal and interest payments on the security). Because of this risk, corporate debentures are sold at a yield above those offered on Government Securities, which are sovereign obligations. Normally, the value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit risk as well as any actual event of default. The greater the credit risk, the greater the yield required for someone to be compensated for the increased risk. Reinvestment Risk: This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that
	 buration Risk: Duration is a risk measure used to measure the bond/security price changes to potential changes in interest rates. Duration of portfolio x the expected changes in rates = the expected value change in the portfolio. Duration is more scientific measure of risk compared to average maturity of the portfolio. The higher the duration of the portfolio, the greater the changes in value (i.e. higher risk) to movement in interest rates. Modified duration is the duration of a bond/security given its current yield to maturity, put/call feature, and an expected level of future interest rates.
	• Benchmark Risk: The floating rate segment of the domestic debt market is not very developed. Currently, majority of the issuance of floating rate papers is linked to NSE MIBOR. As the floating rate segment develops further, more benchmark rates for floating papers may be available in future. The fewer number of benchmark rates could result in limited diversification of the benchmark risk.
	Different types of securities in which the Scheme would invest as given in the SID carry different levels and types of risk. Accordingly, the Scheme's risk may increase or decrease depending upon its investment pattern. E.g. corporate bonds carry a higher amount of risk than Government Securities. Further even among corporate bonds, bonds which are AAA rated are comparatively less risky than bonds which are AA rated.
	Prepayment Risk: The risk associated with the early unscheduled return of principal on a fixed-income security. The early unscheduled return of principal may result in reinvestment risk.

Risk Factors associated with investments in Money Market instruments

- Investments in money market instruments would involve a moderate credit risk i.e. risk of an issuer's liability to meet the principal payments.
- Money market instruments may also be subject to price volatility due to factors such as changes in interest rates, general level of market liquidity and market perception of credit worthiness of the issuer of such instruments.

The NAV of the Scheme's Units, to the extent that the corpus of the Scheme is invested in money market instruments, will be affected by the changes in the level of interest rates. When interest rates in the market rise, the value of a portfolio of money market instruments can be expected to decline.

Risks associated with investing in Derivatives

- The Scheme may use derivative instruments like stock index futures, option on stocks, stock indices, interest rate swaps, forward rate agreements or other derivative instruments as permitted under the Regulations and guidelines.
- As and when the Scheme trade in the derivatives market, there are risk factors and issues concerning the use of derivatives that investors should understand. Derivative products are specialised instruments that require investment techniques and risk analyses different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is the possibility that a loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the "counter party") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives, lack of liquidity and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. Thus, derivatives are highly leveraged instruments. Even a small price movement in the underlying security could have a large impact on their value. Also, the market for derivative instruments is nascent in India.
- Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be perused by the fund manager involve uncertainty and decision of fund manager(s) may not always be profitable. No assurance can be given that the fund manager(s) will be able to identify or execute such strategies.

The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

Risks associated with investing in securitised debt

Securitised Debt: Securitised debt papers carry credit risk of the Obligors and are dependent on the servicing of the PTC/Contributions etc. However these are offset suitably by appropriate pool selection as well as credit enhancements specified by Rating Agencies. In cases where the underlying facilities are linked to benchmark rates, the securitised debt papers may be adversely impacted by adverse movements in benchmark rates. However this risk is mitigated to an extent by appropriate credit enhancement specified by rating agencies. Securitised debt papers also carry the risks of prepayment by the obligors. In case of prepayments of securities debt papers, it may result in reduced actual duration as compared to the expected duration of the paper at the time of purchase, which may adversely impact the portfolio yield. These papers also carry risk associated with the collection agent who is responsible for collection of receivables and depositing them. The Investment team evaluates the risks associated with such investments before making an investment decision.

The underlying assets in the case of investment in securitised debt could be mortgages or other assets like credit card receivables, automobile/vehicle/personal/commercial/corporate loans and any other receivables/loans/debt.

Risk factors associated with investing in REITs and InvITs:

Market Risk: REITs and InvITs Investments are volatile instruments and are subject to price fluctuations on a daily basis owing to the market conditions and factors impacting the underlying assets. Fund Manager will do the necessary due diligence but actual market movements may be at variance with the anticipated trends.

Liquidity Risk: The liquidity of the investments could, at times, be restricted by trading volumes, settlement periods, dissolution of the trust, potential delisting of units on the exchange etc. Hence, the time taken by the Fund Manager for liquidating the investments in the scheme may be longer than anticipated. As these products are new to the market they are likely to be exposed to liquidity risk.

Reinvestment Risk: Investments in REITs & InvITs may carry reinvestment risk as there could be repatriation of funds by the Trusts in form of buyback of units or dividend pay-outs, interest payments, etc. Depending upon the market conditions, interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. As a result, the proceeds may get deployed at a lower yield.

Regulatory/Legal Risk: REITs and InvITs being new asset classes, regulatory guidelines may be evolving in nature which may impact the investments in REITs and InvITs.

Risks associated with investments in repo transactions in corporate bonds

In repo transactions, also known as a repo or sale repurchase agreement, securities are sold with the seller agreeing to buy them back at later date. The repurchase price should be greater than the original sale price, the difference effectively representing interest. A repo is economically similar to a secured loan, with the buyer receiving corporate debt securities as collateral to protect against default. The Scheme may invest in repo of corporate debt securities which are subject to the following risks:

- a. Counterparty Risk: This refers to the inability of the seller to meet the obligation to buy back securities at the contracted price on the contracted date. The Investment Manager will endeavour to manage counterparty risk by dealing only with counterparties, having strong credit profiles, approved by our credit risk analysis team. The exposure to each counterparty will be within the overall approved credit limits. Also, the counterparty risk is to an extent mitigated by taking collateral equivalent in value to the transaction after knocking off a minimum haircut on the intrinsic value of the collateral. In the event of default by the repo counterparty, the scheme shall have recourse to the corporate debt securities.
- b. Collateral Risk: Collateral risk arises when the market value of the securities is inadequate to meet the repo obligations. This risk is mitigated by restricting participation in repo transactions with collateral bearing a minimum rating as prescribed by the regulators (currently AA or equivalent and above rated money market and corporate debt securities). Any rating downgrade will tantamount to either an early termination of the repo agreement or a call for fresh margin to meet the minimum haircut requirement. In addition, the Investment manager may apply a higher haircut on the underlying security than mentioned above to adjust for the illiquidity and interest rate risk on the underlying instrument. The adequacy of the collateral will be monitored on a daily basis by considering the daily market value & applying the prescribed haircut. In the event of shortfall in the collateral, the counterparty shall be asked to replenish the same. If the counterparty is not able to top-up either in form of cash / collateral, it shall tantamount to early termination of the repo agreement.

c. Settlement Risk: Corporate Bond Repo shall be settled between two counterparties in the OTC segment unlike in the case of Government securities repo transactions where CCIL stands as central counterparty on all transactions which neutralizes the settlement risk. However, the settlement risk pertaining to CDRs shall be mitigated through Delivery versus Payment (DvP) mechanism which is followed by all clearing members.

Risk Factors of covered call strategy

Volatility risk: Volatility risk arises when market is more volatile than the Fund Manager's estimation. The investment manager holds view of range bound market and the market volatility breaches these limits, thereby increasing risk to the portfolio. This risk is mitigated as we have covered with the stocks we hold.

Opportunity loss: Selling call option means investment manager are obligated to deliver the stock at a predetermined price. In case when the stock price moves above the predetermined price, the upside opportunity is lost on the stock, because we have sold call option.

Writing call options are highly specialized activities and entail higher than ordinary investment risks. In such investment strategy, the profits from call option writing is capped at the option premium, however the downside depends upon the increase in value of the underlying equity shares.

Risk factors associated with investments in Perpetual Debt Instruments (PDI) including Additional Tier-1 and Tier-2 bonds

The scheme may invest in certain debt instruments with special features viz. subordination to equity (absorbs losses before equity capital) and/or convertible to equity upon trigger of a pre-specified event for loss absorption including Additional Tier I bonds and Tier 2 bonds issued under Basel III framework (known as perpetual debt instruments). PDIs are instruments issued by the borrower to strengthen their capital structure and as the name suggests these instruments do not have a specific maturity date but have an embedded call option instead and maybe less liquid than conventional debt instruments. These bonds are subordinate to all other debt and only senior to equity capital. The issuer may call or redeem the bonds on the call exercise date if they can refinance the issue at a cheaper rate, especially when interest rates are declining. The issuers of such instruments could be Banks, NBFCs and Corporates. PDIs issued by Banks and NBFCs fall under scope of Reserve Bank of India ("RBI")'s guidelines for Basel III capital regulations. These are also referred to as Additional Tier I (AT1 bonds). However, there are no regulatory guidelines for issuance of PDIs by Corporates.

Since PDIs have special features other than usual non-convertible bonds, there are additional risks associated with such instruments which are listed below –

Risk related to coupon servicing -

Banks – As per the terms of the instruments, Banks may have discretion at all times to cancel distributions/payment of coupons. In the event of non-availability of adequate distributable reserves and surpluses or inadequacy in terms of capital requirements, RBI may not allow banks to make payment of coupons. These bonds may not be permitted to pay these coupons if the Bank's financial position improves subsequently (non-cumulative).

NBFCs – While NBFCs can defer/postpone payment of coupon in case paying the coupon leads to breach of capital ratios, they also have discretion at all times to cancel payment of coupon.

Corporates - Corporates usually have discretion to defer the payment of coupon. However, the coupon is usually cumulative and any deferred coupon shall accrue interest at the original coupon rate of the PDI.

Risk of write down or conversion to equity -

In the event of shortfall in maintenance of capital adequacy ratios and/or Point of Non Viability Trigger (PONV – a point defined by RBI when a bank is deemed to have become non-viable unless appropriate measures are taken to revive its operations or infusion of public sector capital), PDIs issued by Banks could be written down or converted to common equity. This risk does not exist in case of PDIs issued by NBFCs and Corporates.

Risk of call option not exercised by the issuer -

Banks and NBFCs – The issuing Banks and NBFCs have an option to call back the instrument after minimum period as per the regulatory requirement from the date of issuance and specified period thereafter, subject to meeting the RBI guidelines. However, if the issuer does not exercise the call on first call date, the Scheme may have to hold the instruments for a period beyond the first call exercise date and hence may be exposed to valuation impacts.

Corporates – Unlike Banks and NBFCs there is no minimum period for call date for Corporate issuers. However, if the corporate does not exercise the call option, the Scheme may have to hold the instruments for a period beyond the call exercise date and hence may be exposed to valuation impacts.

Risk Mitigation – The Scheme will not invest more than 10% of the NAV of the scheme in such instruments and will limit exposure to 5% of the NAV of the Scheme for such instruments issued by a single issuer.

Risk associated with short selling and securities lending by scheme

Short Selling Risk: The risk associated with upward movement in market price of security sold short may result in loss. The losses on short position may be unlimited as there is no upper limit on rise in price of a security.

Securities Lending: The risks in lending portfolio securities, as with other extensions of credit, consist of the failure of another party, in this case the approved intermediary, to comply with the terms of agreement entered into between the lender of securities i.e., the Scheme and the approved intermediary. Such failure to comply can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Mutual Fund may not be able to sell such lent securities and this can lead to temporary illiquidity,

Risk factor associated with legal, tax and regulatory risk

The Schemes could be exposed to changes in legal, tax and regulatory regime which may adversely affect it and/or the investors. Such changes could also have retrospective effect and could lead to additional taxation imposed on the Schemes which was not contemplated either when investments were made, valued or disposed off.

Risks associated with transaction in Units through Stock Exchange mechanism

In respect of transactions in Units of the Scheme routed through the BSE StAR MF platform or any other recognised stock exchange platform as intimated by the AMC, allotment and redemption of Units on any Business Day will depend upon the order processing/settlement by BSE, or such other exchange and their respective clearing corporations on which the Fund has no control. Further, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by BSE or such other recognised exchange in this regard.

	Risks associated with Segregated Portfolio
	Liquidity risk - Segregated Portfolio is created to separate debt and money market instruments affected by a Credit Event from the Main Portfolio of the Scheme to ensure fair treatment to existing, entering and exiting investors of the scheme. The Fund will not permit redemption of the Segregated Portfolio units, but the units will be listed on a recognized stock exchange. The Fund is not assuring any liquidity of such units on the stock exchange which may subject investors to impact cost. Further, trading price of units on the stock exchange may be significantly lower than the prevailing NAV. Investors can continue to transact (subscribe/redeem) from the Main Portfolio.
	Credit risk – While the AMC will put in sincere efforts to recover the securities in the Segregated Portfolio and distribute the same to unit holders, since such securities are affected by credit event, it is likely that such securities may not realize any value leading to losses to investors.
Plans / Options	The Regular Plan and Direct Plan shall be available under the Scheme.
	Options :
	 Growth – Regular Growth – Direct Income Distribution cum Capital Withdrawal Option (IDCW) – Regular Income Distribution cum Capital Withdrawal Option (IDCW) – Direct
	The Growth Option shall be default Option under the Plans of the Scheme.
	Plans and Options thereunder will have a common portfolio.
	Investors may please note that the Direct Plan under the Scheme is meant for investors who understand the capital market, mutual funds and the risks associated therewith. The risks associated with the investments in the schemes of mutual funds may vary depending upon the investment objective, asset allocation and investment strategy of the Schemes and the investments may not be suited for all categories of investors. The AMC believes that investors investing under the Direct Plan of the Scheme are aware of the investment objective, asset allocation, investment strategy,risks associated therewith and other features of the Scheme and has taken an informed investment decision. Please note that SID, SAI, Key Information Memorandum or any other advertisements and its contents are for information only and do not constitute any investment advice or solicitation or offer for sale of units of the Scheme from the AMC.
Sub Options under Income	i) Payout of IDCW
Distribution cum capital withdrawal	ii) Reinvestment of IDCW
option (IDCW)	Reinvestment of IDCW shall be default Sub Option.
Dividend Policy	Declaration of dividend is subject to the availability of distributable surplus. Such dividends if declared will be paid under normal circumstances, only to those Unitholders who have opted for Income Distribution cum capital withdrawal Option with specified sub-options.
	However, it must be distinctly understood that the actual declaration of dividends under the Scheme and the frequency thereof will, inter alia, depend upon the distributable surplus of the Scheme, as computed in accordance with SEBI
	Regulations. The Trustees reserve the right of dividend declaration and to change the frequency, date of declaration and the decision of the Trustees in this regard shall be final. There is no assurance or guarantee to unit holders as to the rate of dividend distribution nor that the dividend will be regularly paid.
	The dividend that may be paid out of the net surplus of the Scheme will be paid only to those Unit holders whose names appear in the register of Unit holders on the notified record date. In case of Units held in dematerialized mode, the Depositories (NSDL/CDSL) will give the list of demat account holders and the number of units held by them in demat form on the Record Date to the Registrars and Transfer Agent of the Mutual Fund.
	The dividend will be at such rate as may be decided by the AMC in consultation with the Trustees. Investors may please note that amounts distributed under the Income Distribution cum capital withdrawal options, can be made out of investors capital (Equalization Reserve), which is part of sale price that represents realized gains.
	Under the Growth Option, income earned on the Scheme's corpus will remain invested in the Scheme and will be reflected in the Net Asset Value (NAV). Unit holders who opt for this Option will not receive any dividend in normal circumstances. Under the Income Distribution cum capital withdrawal Option, it is proposed to distribute dividends at regular intervals, subject to availability of distributable profits, as computed in accordance with SEBI Regulations. Investors in the Scheme have the choice of opting for either payout or reinvestment of dividend, as stated above. Subsequent to the declaration of dividend, NAV of the Income Distribution cum capital withdrawal Option and Growth Option will be different.
Redemption options/Liquidity	The Scheme will offer for purchase / switch-in and redemption / switch-out of units at NAV based prices on every Business Day on an ongoing basis.
Despatch of Redemption Request	As per the Regulations, the Fund shall dispatch the redemption / repurchase proceeds within 10 Business Days. - 3) All applicants are deemed to have accepted the terms subject to which this offer is being made and bind themselves to the terms upon signing the Application Form and tendering the payment.
- 4) Investors are requested to use the services of AMFI certified Distributors empanelled with the AMC. The AMC shall not be liable to an Investor, with respect to investments made through non-empanelled Distributors.

If the investor wishes to invest directly, i.e. without involving the services of any agent or broker, "DIRECT" should be mentioned in the space provided for "ARN Number" in the Application Form/Transaction Form. Any subsequent change/updation/removal of broker code will be based on the written request from the Unit holder and will be on a prospective basis only from the date when the Registrar executes such written instruction.

Employee Unique Identification Number (EUIN) : SEBI circular CIR/IMD/ DF/21/2012 dated September 13, 2012, required creation of a unique identity number of the employee/relationship manager/sales person of the distributors interacting with the investor for the sale of mutual fund products, in addition to the AMFI Registration Number (ARN) of the distributor. This has been recommended by SEBI in order to avoid any instance of mis-selling, particularly in advisory based transactions. This would further help tackle the problem of mis-selling even if the employee/relationship manager/sales person leave the employment of the distributor. Due to this regulatory change, all employees of distributors who are involved in sale of mutual fund products are required to obtain an Employee Unique Identification Number (EUIN). Applications received without a valid EUIN and/or valid sub-broker code(should be a valid ARN and not an internal code) are subject to rejection by the fund.

INSTRUCTIONS ON CONTROLLING PERSONS/ ULTIMATE BENEFICIAL OWNER

As per SEBI Master Circular No. CIR/ISD/AML/3/2010 dated December 31, 2010 regarding Client Due Diligence policy, related circulars on anti-money laundering and SEBI circular No. CIR/MIRSD/2/2013 dated January 24, 2013, non-individuals and trusts are required to provide details of controlling persons [CP]/ultimate beneficiary owner [UBO] and submit appropriate proof of identity of such CPs/UBOs.
