Current Portfolio Strategy

- Yields at the longer end of the curve remain influenced by global cues including global bond yields, crude and commodity prices. We have seen a rally in recent weeks given the drop in crude prices, down-move in US treasury yields and expectation that Federal Reserve may soften the pace of rate hikes given some softening seen in US inflation prints.
- Overall, the long duration segment is expected to continue to see volatility based on move in global markets as well as domestic macro factors such as inflation which remain elevated.
- Absorption of heavy bond supply also remains a challenge in the absence of open market operation (OMO) purchases and non-inclusion in global bond indices. Steepness in the curve remains low beyond the 5 yr segment and spread between 10 yr and 5 yr is only ~15 bps and between 14 yr and 10 yr is also less than 15 bps.
- Under these circumstances, we intend to position with an underweight stance in the long bond portfolios versus the index and intend to take advantage tactically of any opportunities that may arise on the longer end of the curve
