Arbitrage in simple terms means taking advantage of price differential between different markets for the same commodity. In financial markets, this translates into entering into trading positions in the same security through different market segments.

Fund Approach

- Currently, allocation towards hedged equities or cash futures arbitrage is at ~77%.
- The fund aims to have exposure in companies where the fund managers believes, dividend arbitrage opportunities exists.
- The rest is invested in Liquid Fund, G-Secs and Bank FDs (Margin Placements). The debt portion is actively managed but has a conservative maturity profile and a high quality focus: AAA/Sovereign/A1+ portfolio and no exposure to any low rated Debt Instruments or any Perpetual Bonds.

Investment Objective

The investment objective of the Scheme is to seek to generate reasonable returns by predominantly investing in arbitrage opportunities in the cash and derivatives segments of the equity markets and by investing balance in debt and money market instruments. There is no assurance that the objective of the Scheme will be realised and the Scheme does not assure or guarantee any returns.

HSBC Arbitrage Fund philosophy

- To enter into simultaneous transactions of a long position in cash and exactly off-setting short position in futures.
- Towards the expiry or before the expiry of the derivatives contract, the positions are reversed or rolled over.

Note : Fund Manager manages the Fund as per prevailing Market condition. The above philosophy shall not be treated as investment strategy which is subject to Market condition at a given point of time.

Why HSBC Arbitrage Fund?

- Investment predominantly in arbitrage opportunities in the cash and derivatives segments of the equity markets; and debt and money market instruments
- Aim to provide reasonable liquidity and risk adjusted performance to suit the investor's requirements
- Maintains optimum allocation across arbitrage instruments
- Aims to generate opportunity of reasonable returns over short to medium term

Market Actions

The average roll spreads captured this month was 8.65% annualized. No duration or credit risk is taken on the debt side and that will pull down the final returns a bit.

- January expiry roll levels began at 84-86 bps with very low participation as level moved lower 82-84 bps. Participation aggression was seen from short rollers, rolls progressed gradually to 75-80 bps while on expiry day levels remained volatile for selected stock and levels narrowed towards the end at 72-76 bps.
- Equity markets were jittery this month as the banking sector was disappointed with Q3 numbers, also FII flows retracted this month. The Banking index saw its biggest fall in almost 2 years on January 17 – a day after the heavy-weight index HDFC Bank reported its Q3 results.
- Broader markets remained buoyed this month. CPI inflation rose to 5.69% (YoY) in December (expected 5.88%; before 5.55%), largely due to an unfavorable base effect. Sequentially, headline inflation fell (-0.3% MoM) for the first time in four months.
- Investors seem to be sitting on the side-lines as the Interim Budget is due in April – budget commentary coupled with FII flows could give a firm direction to the markets in the future. Nifty decreased around 1.7% in January 2024, after increasing by 8% in the last month of CY2023.
- FIIs turned net sellers this month. FIIs sold equities worth more than \$2.5 bn as compared to \$7 bn of buying seen the previous month. In the last 3 months, FIIs have bought equities worth \$6.7 bn.
- AUM of Arbitrage Funds increased 11,900 cr compared to the previous expiry. This month's average roll basis was lower than the previous expiry, 83 bps vs 87 bps the previous month.

Global Markets

Global equity markets increased in January 2024 on the back of strong earnings – especially from the Tech & Semiconductor names. Investors expect the Fed to maintain status-quo at its upcoming meeting on January 31, the Fed had last hiked rates in its July 2023 meeting and has since maintained interest rates at 5.25%-5.5%.

- US CPI for December came at 0.3% (MoM) (vs expectations of 0.2%), taking the headline CPI to 3.4% (vs prior 3.1% and expected 3.2%). Core saw a jump of 0.3% (MoM) (on expected lines). Japan Equities (Nikkei 225) broke out to a new high – scaling levels that it did almost 35 years ago, and only 10% away from its ATH from 1989, benefiting materially from the stock exchange regulations requiring companies to improve shareholder value.
- All three major US indices traded positive this month - with NASDAQ increasing the most, by 3.3%. US10YR increased from 3.9% (Dec'23) to 4.1%. The US Dollar Index increased from 101.3 in Dec'23 to 103.5. Crude increased from \$77/bbl to \$81.5/bbl.
