

Asset allocation and wealth creation

Aim to Meet financial goals and maximise wealth

An Investor Awareness & Education Initiative

Diversify your portfolio to mitigate risks and maximise rewards

Saurabh and Sukesh are watching a cricket match when...

Saurabh (during a break in the game):
Sukesh, what is your investment strategy?

Considering the performance of equity in 2022, I am thinking of investing all money in debt this year.

Not diversifying into equity and debt?

Why should I?

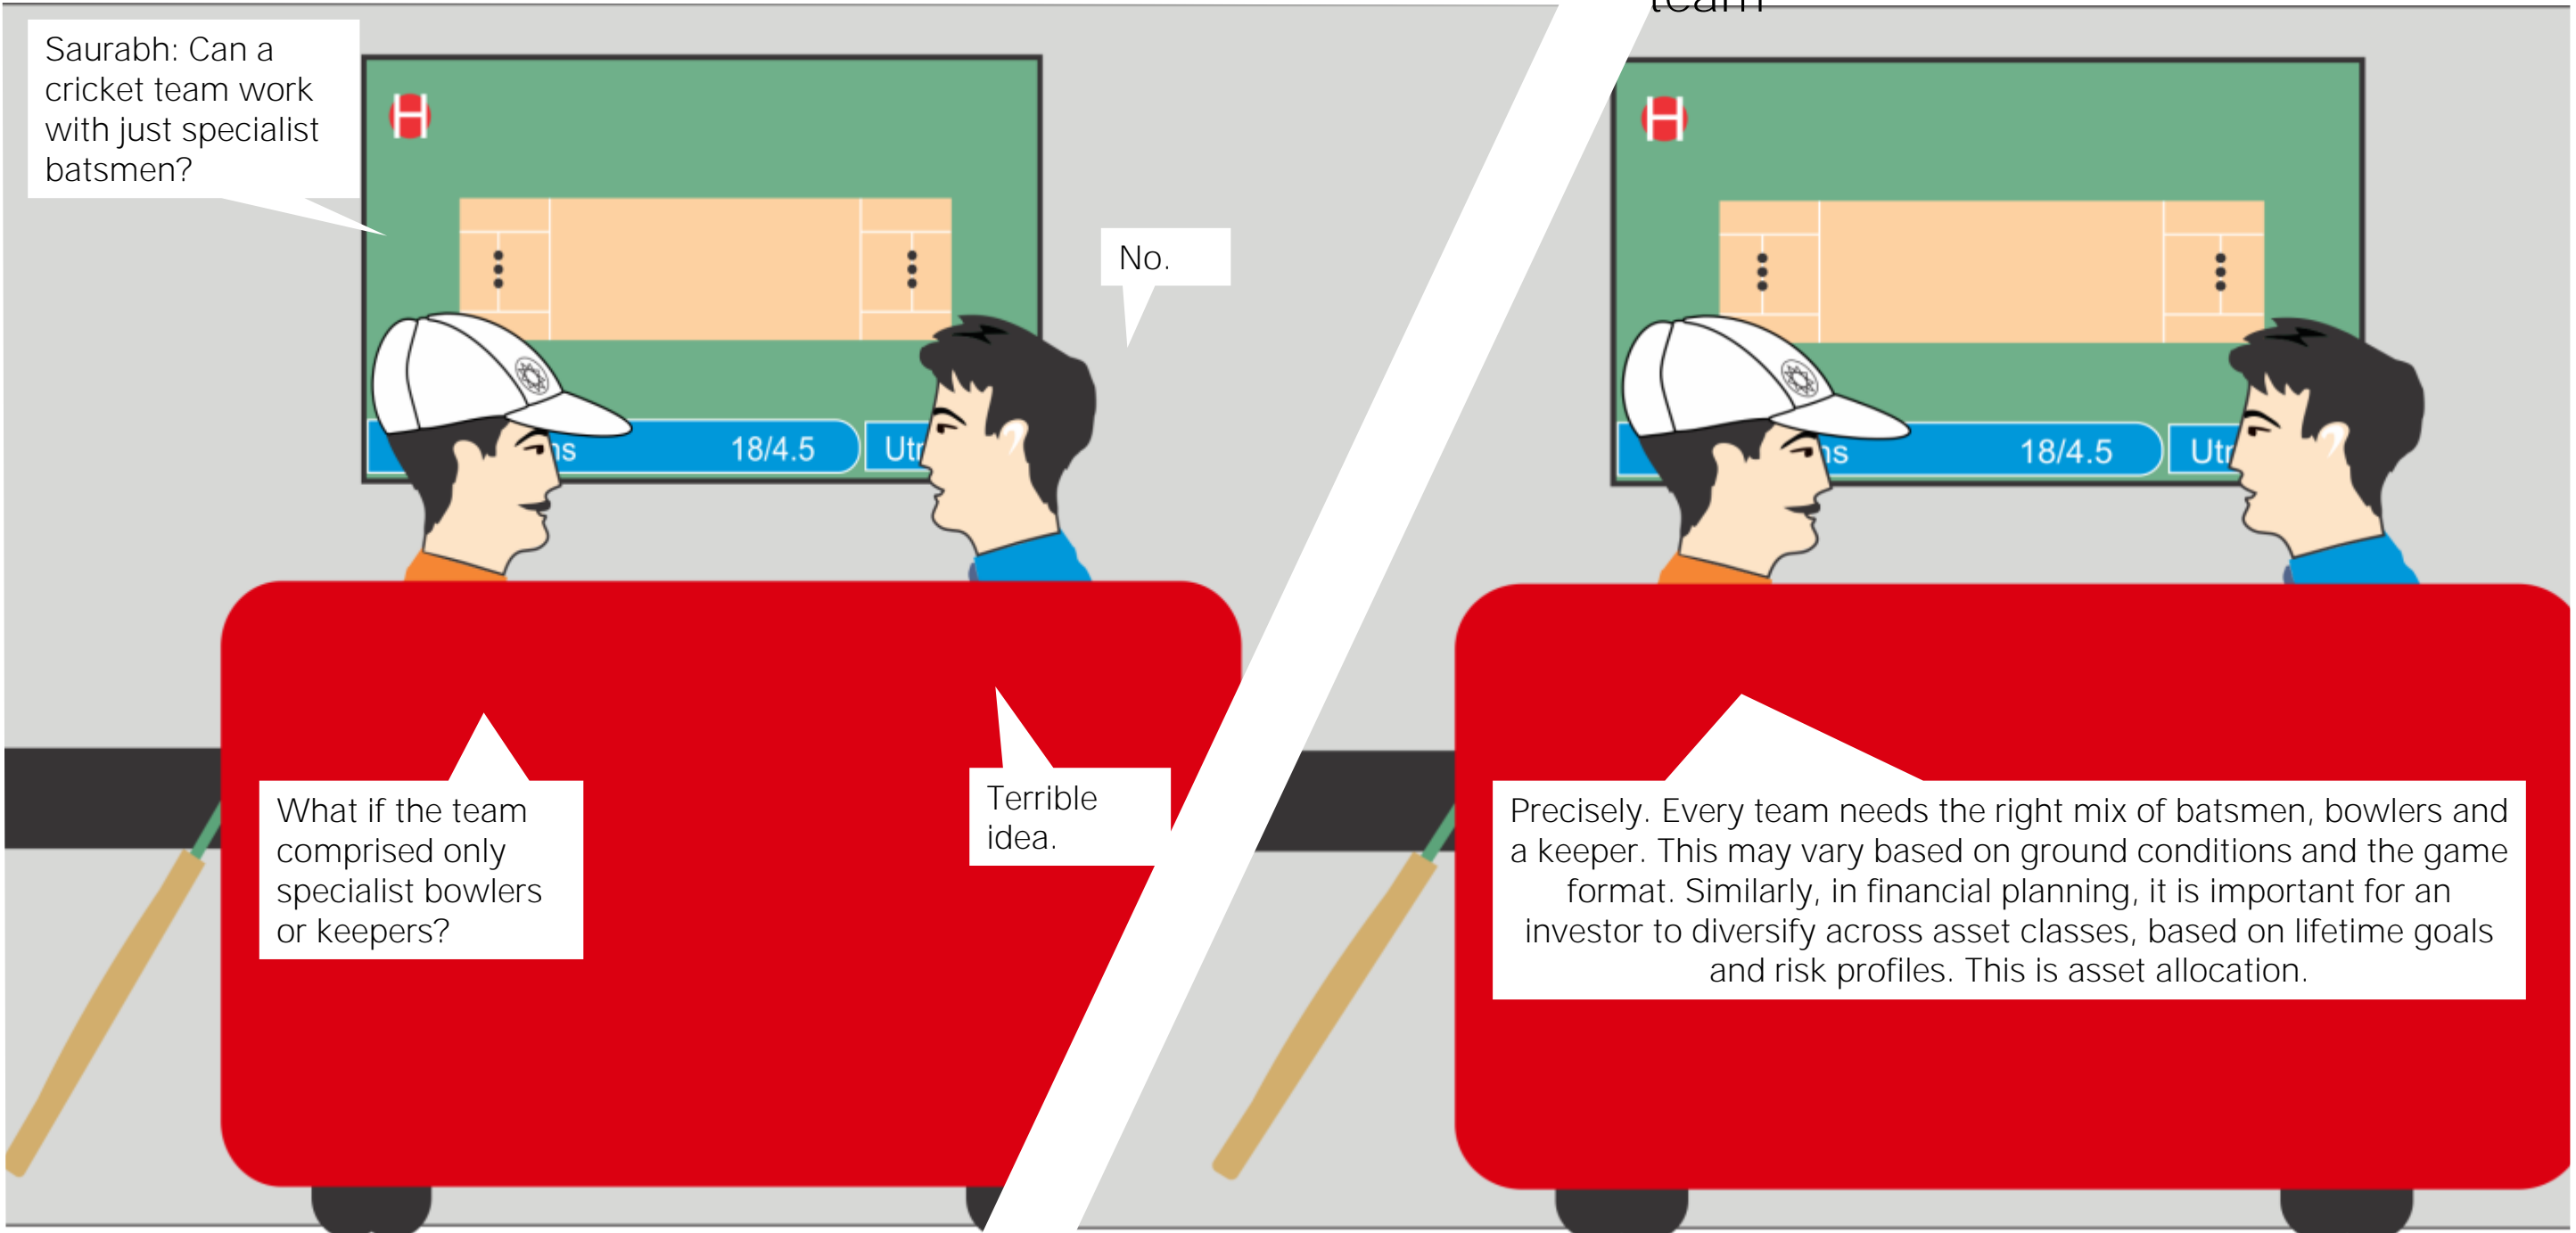

All asset classes have potential weaknesses. While equity investments can be risky in the short term, they can drive significant long-term wealth creation. Efficient asset allocation can spread the risk and maximise returns as per one's risk profile.

I'm not sure I completely understand that.

Past performance may or may not sustain and does not guarantee future performance.

Asset allocation is an imperative for successful financial planning

Diversify your portfolio akin to a winning cricket team

Saurabh: Can a cricket team work with just specialist batsmen?

No.

What if the team comprised only specialist bowlers or keepers?

Terrible idea.

Precisely. Every team needs the right mix of batsmen, bowlers and a keeper. This may vary based on ground conditions and the game format. Similarly, in financial planning, it is important for an investor to diversify across asset classes, based on lifetime goals and risk profiles. This is asset allocation.

Past performance may or may not sustain and does not guarantee future performance.

What do the years gone by teach us?

2022 was a volatile year, in which gold was the top performer

- ◆ Gold delivered an impressive 14% return in calendar year 2022, the highest in the category since 2020
- ◆ Geo-political tensions between Russia and Ukraine, global recession worries amid policy tightening by major central banks buoyed the asset class
- ◆ Equities ended up on second spot among the major asset classes, giving 4% return during the calendar year 2022
- ◆ Debt gave the lowest returns among the major asset classes, rising 3% on year in 2022

Equity represented by S&P BSE SENSEX, debt by CRISIL Composite Bond Fund Index, and gold by India Bullion and Jewellers Association (IBJA) spot gold prices (PM) (per 10 gram)

Sensex value as of 31-Jan-2023 is 59549.9

Source: BSE, CRISIL Research

Past performance may or may not sustain and does not guarantee future performance.

What does the performance history of asset classes indicate?

- ◆ Different asset classes outperform each other across different time periods

The best asset changes every year

Equity represented by S&P BSE Sensex, Debt by CRISIL Composite Bond Fund Index, and Gold by IBJA spot gold prices (PM) (per 10 gram), Calendar Year Absolute Returns
Sensex value as of 31-Jan-2023 is 59549.9

Status of individual asset classes

Indians have a traditional bias for the fixed income category

- ◆ Traditionally, Indians have favoured debt investments, primarily bank fixed deposits
- ◆ Post office savings schemes and provident funds (public and employee) follow closely in popularity
- ◆ The higher preference for fixed-income instruments is reflected in India's household savings data
 - Deposits and cash account for ~71% of the total gross financial savings of an average Indian household

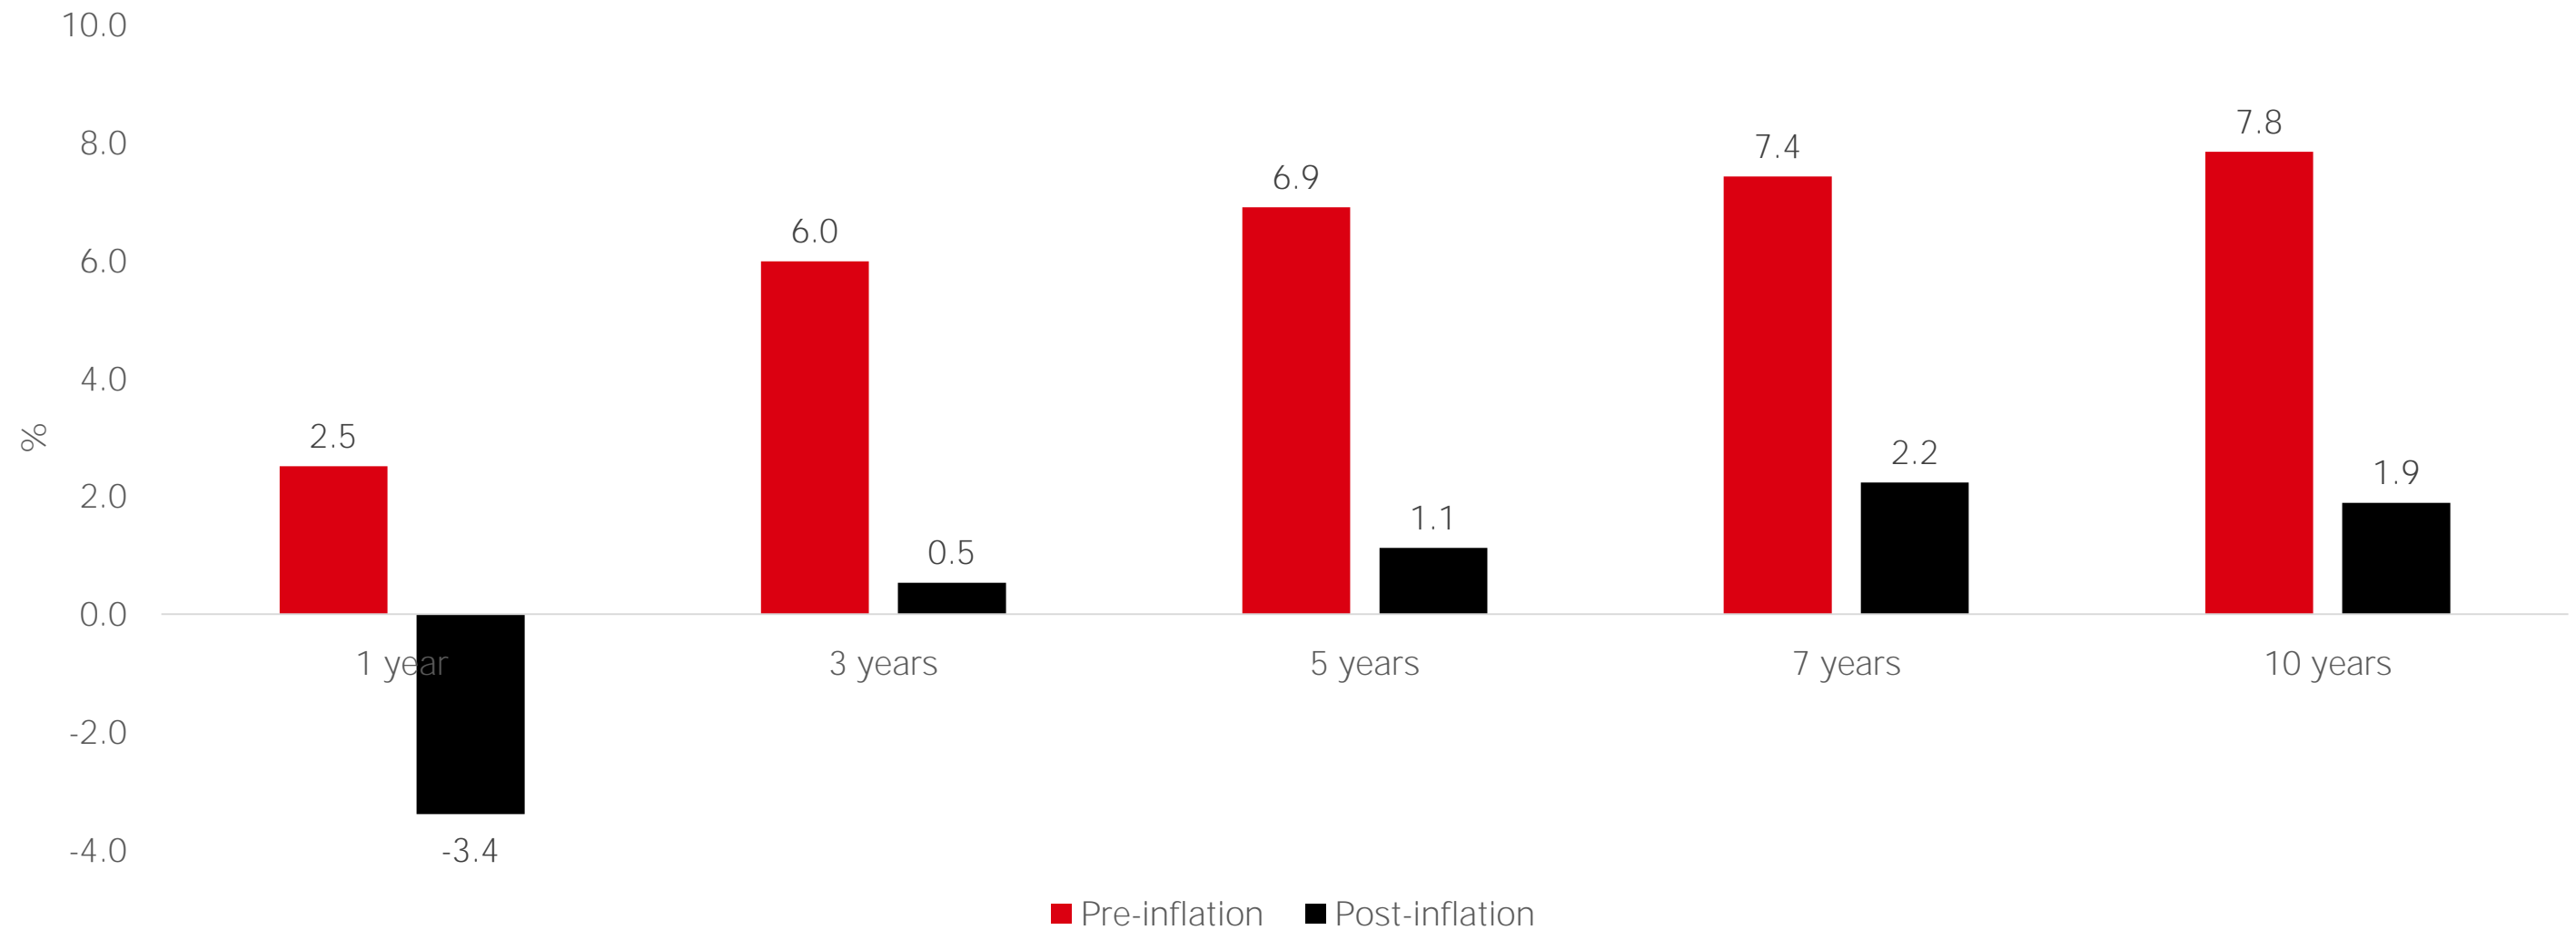

Components of household financial savings

Source: RBI, Data as of FY22

Debt may not offer adequate inflation-adjusted returns

Inflation tends to erode returns from fixed-income instruments, resulting in low real returns (post-inflation) in the hands of the investor

Debt represented by CRISIL Composite Bond Fund Index, inflation by average of annual CPI-IW inflation.

Gold, commodities, and real estate are fluctuating and risky

- ◆ Gold: Allocate in moderation
 - While this asset class tends to have a positive growth trajectory in the long term, it is prone to short-term fluctuations
 - Investors should invest in gold in moderation, primarily for portfolio diversification and as a hedge against economic slowdown/recession
- ◆ Real estate: Tough to call, has significant risks
 - Project delays
 - Title issues
 - Illiquid investment
 - Varied returns
- ◆ Commodities: Regulations still evolving

Gold – fluctuating returns, potential hedge against economic slowdown or recession

Gold represented by gold by IBJA spot gold prices (PM) (per 10 gram)

Past performance may or may not sustain and does not guarantee future performance.

Equity – volatile in the short-term, but has attractive long-term potential

- ◆ While equity is a good investment option for a young as well as other types of investors, the asset class is beneficial over the long term
- ◆ Equity is exposed to volatility in the short term
- ◆ As evident from the returns distribution chart below, the percentage of positive returns increases as the investment horizon increases
- ◆ Similarly, the holding period returns chart shows there are no negative returns for an investment period of above 15 years
- ◆ Another benefit of long-term investing is that volatility decreases with an increase in the investment horizon

Holding period returns

Average annualised returns on a daily rolling basis since inception (1979) of S&P BSE Sensex considered across various holding periods

Sensex value as of 31-Jan-2023 is 59549.9

Investor approach

Asset allocation – The key factor

- ◆ Allocating funds solely to a single asset class is not prudent as it may not garner efficient inflation- and risk-adjusted returns
- ◆ Different levels of correlation among different asset classes provide the portfolio with an effective hedge
- ◆ The basic premise of asset allocation is to spread risk from higher-risk to lower-risk asset classes, and maximise risk-adjusted returns based on the risk profile
- ◆ Asset allocation is an investment strategy to determine how much of one's portfolio is to be invested in different asset classes, depending on one's risk-taking ability and financial goals
- ◆ Further, allocation is not only between asset classes but also within an asset class
 - Equity sub-asset allocation based on market cap (large, mid- and small cap) and sector or theme
 - Debt sub-asset allocation based on maturity (short- and long-term)
- ◆ Asset allocation can help meet financial goals and maximise wealth

Past performance may or may not sustain and does not guarantee future performance.

Asset allocation reduces volatility, provides better risk-adjusted returns

- ◆ To test the benefit of asset allocation, we compared the returns, volatility and risk-adjusted returns under individual asset classes -- equity, debt and gold -- with those under asset allocation combination of the three classes (in a ratio of 40:40:20, respectively) since 2007
- ◆ The asset allocation combination fares well on all the three parameters – returns, volatility and risk-adjusted returns

Asset allocation versus solitary asset-class performance

	Equity (100%)	Debt (100%)	Gold (100%)	Equity (40%) / Debt (40%) / Gold (20%)
Returns	9.88%	7.43%	11.80%	10.10%
Volatility	21.48%	2.92%	14.88%	9.08%
Risk-adjusted returns	0.18	0.49	0.39	0.45

Equity represented by Nifty 50, debt represented by CRISIL Composite Bond Fund Index, and gold represented by IBJA spot gold prices (PM) (per 10 gram)

Nifty 50 value as of 31-Jan-2023 is 17662.15

For risk adjusted returns, risk free rate has been considered at 6% (average of 91-days T-Bill cutoff yields between Jan 2007-December 2022)

Source: NSE, CRISIL Research Analysis done for illustration purposes only; asset allocation will vary based on the individual's risk-return profile and investment horizon

Past performance may or may not sustain and does not guarantee future performance.

Goal-based asset allocation

Goal-based asset allocation to achieve specific goals

- ◆ A goal-based approach involves investing to achieve specific goals (small, medium and long-term) by allocating money to different asset classes in sync with one's risk capacity and time horizon
- ◆ Let us take the hypothetical case of a young professional
 - His/ her priorities across different time horizons are captured in the table below. Based on those, he/she can allocate funds across asset classes

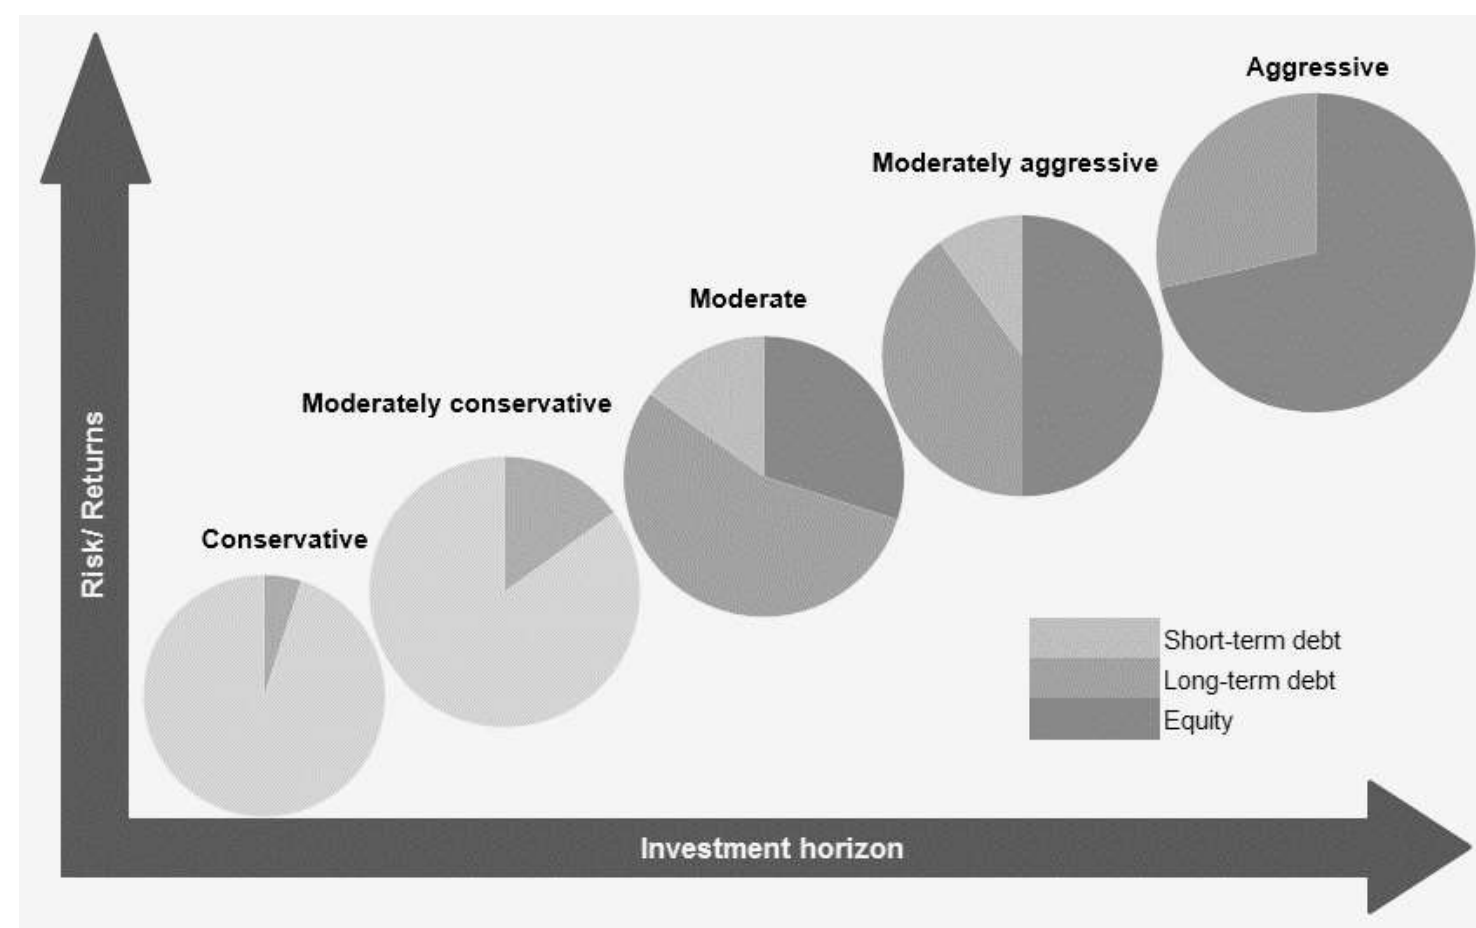

Want	Goal – Buying a car	Goal – Buying a vacation home	Goals – Foreign vacation, estate planning
	Investment objective – Stability	Investment objective – Stability and growth	Investment objective – Growth
	Asset allocation – Moderately conservative	Asset allocation – Moderately aggressive	Asset allocation – Aggressive
Need	Goals – Child care, down-payment on home	Goals – Children's education, parent care in old-age	Goals – Retirement, children's marriage
	Investment objective – Stability	Investment objectives – Stability and growth	Investment objective – Growth
	Asset allocation – Conservative	Asset allocation – Moderate	Asset allocation – Moderately aggressive
	Short term	Medium term	Long term

For representation purpose only, it may differ on a case-to-case basis)
 Past performance may or may not sustain and does not guarantee future performance.

Risk profiling to evaluate risk-taking capacity

Asset allocation based on risk profile

- ◆ Risk profiling involves investors assessing themselves on various parameters to evaluate their risk-taking capacity, and accordingly allocating money to different asset classes
 - Risk profiling is usually undertaken via a formal questionnaire-based process where investors answer questions that probe their goals, risk-taking capacity and suitability

For representation purpose only; may differ on a case-to-case basis
Past performance may or may not sustain and does not guarantee future performance.

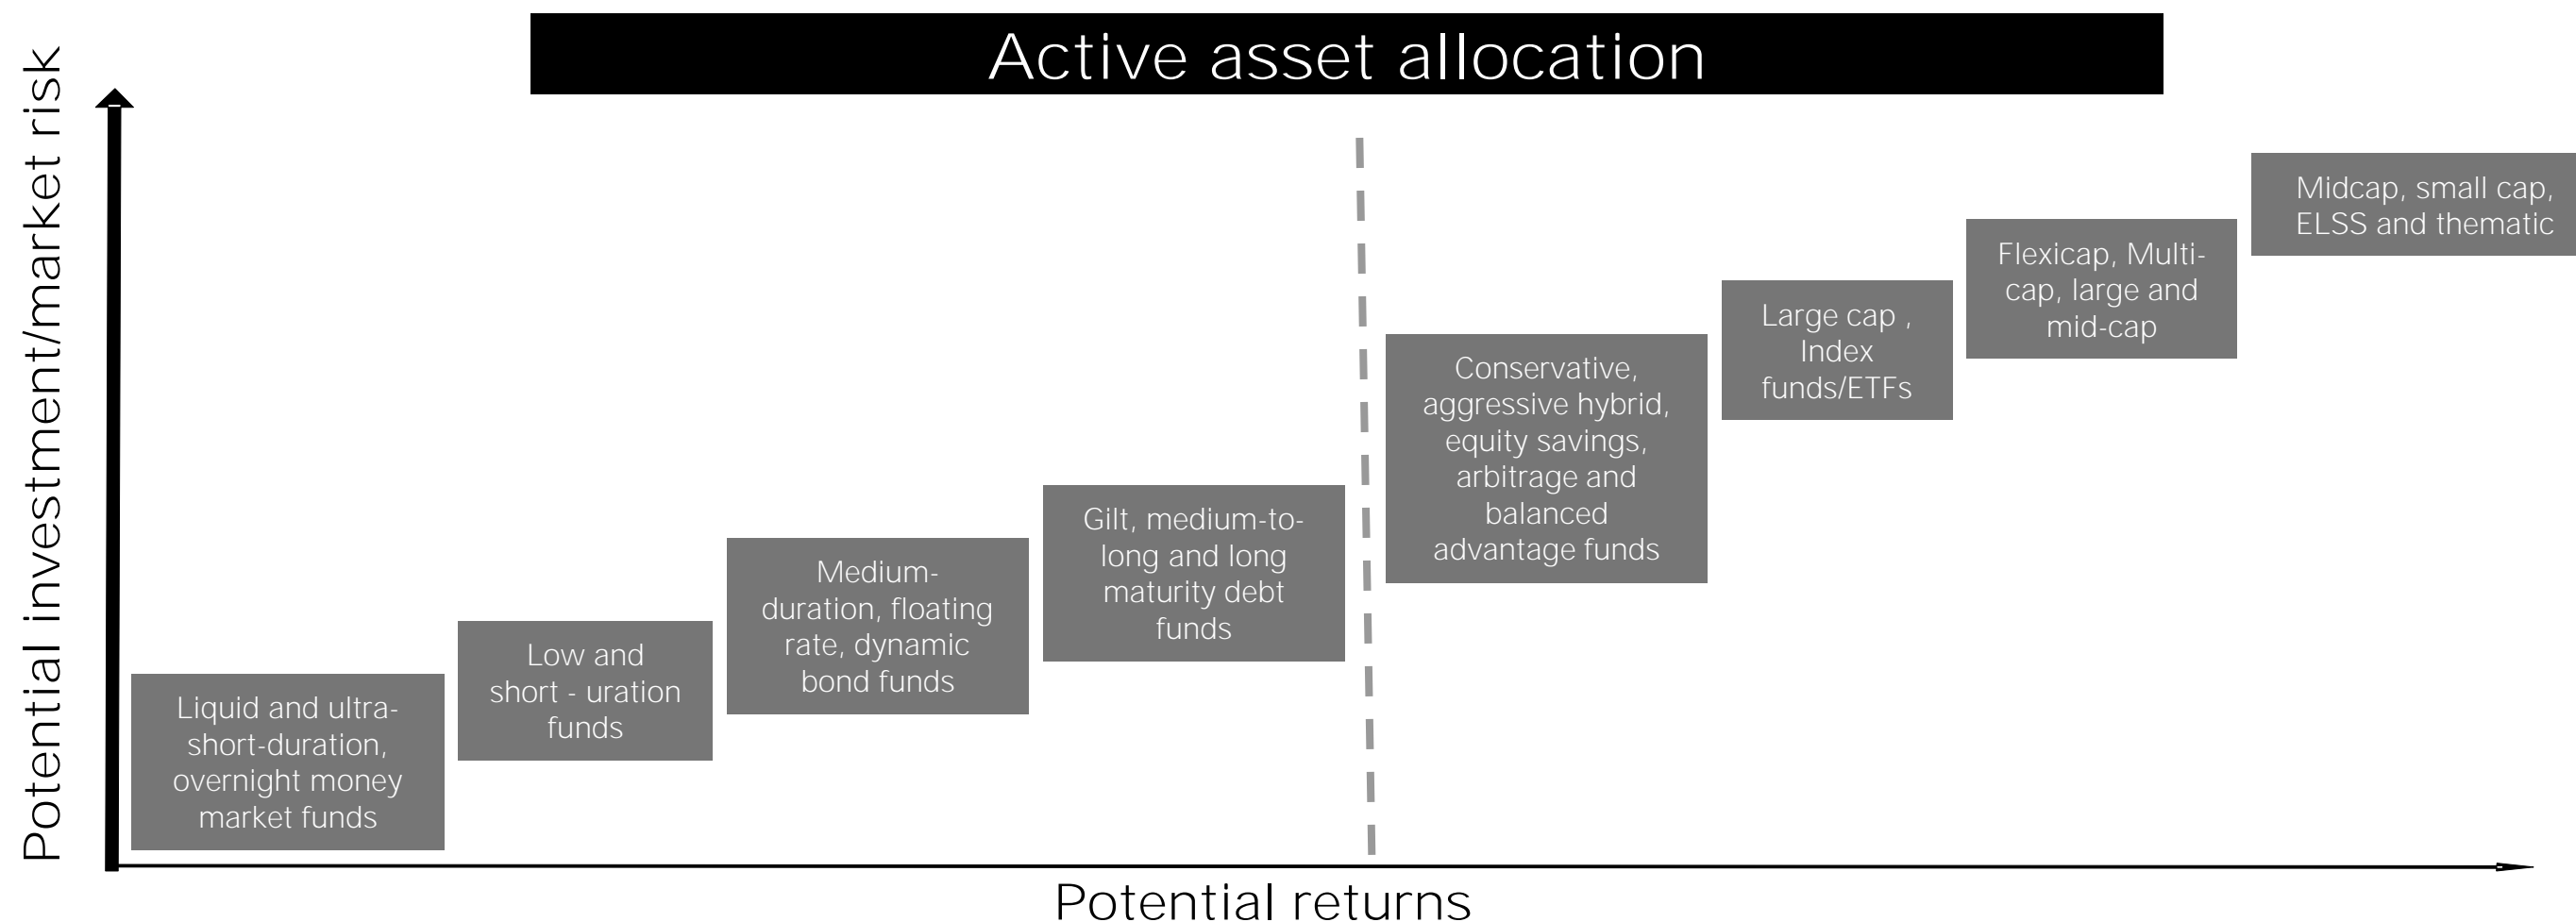

Seek professional help for asset allocation

- ◆ Investors may not have the wherewithal to manage their money and allocate assets across asset classes
- ◆ Professional management is a viable option
- ◆ Investments can be routed through mutual funds
- ◆ Benefits of mutual funds
 - Professional management – A dedicated team helps better analyse investment opportunities in the market
 - Research and credit function – An independent research and credit function aids investment
 - Focused risk management – Imperative to manage inherent risks in asset classes

Past performance may or may not sustain and does not guarantee future performance.

Mutual funds – Easy risk profile-based investing

- ◆ Mutual funds offer a variety of funds in each asset class, and investors can choose funds based on their risk-return objectives and time horizons

Note: For debt funds, potential risk involved indicates interest rate risk and is not an indicator of credit risk. Select fund categories are listed in the above chart. Investment horizon given above is only indicative and gives a general idea on an ideal investment period
Past performance may or may not sustain and does not guarantee future performance.

Takeaways

Asset allocation impact

- ◆ Reduces volatility
- ◆ Encourages stable investor behaviour and potentially provides better results
- ◆ Rebalancing – A key supporting factor

Asset allocation is an excellent tool to address volatility in investment markets

Past performance may or may not sustain and does not guarantee future performance.
