Health Care		0.83%			

Portfolio sectoral positioning:

View	Sector				
Positive	Financials (private lenders)	Consumer Discretionary	Technology	Healthcare	Materials & Real Estate
Underweight	Consumer Staples	Energy	Utilities	Industrials	Communication Services

Performance Attribution (1 Year)

- Performance was adversely impacted by sector allocation while stock selection helped.
- In terms of sector allocation, UW in Utilities, Consumer Staples, Energy and OW in IT & Financials adversely impacted the performance while being OW in Consumer Discretionary helped a bit.
- Stock selection within Financials, Communication Services and Real Estate helped the performance while selection in consumer discretionary hurt the performance.

Fund philosophy

- Prefer dominant and scalable businesses available at reasonable valuations.
- Profit pool consolidation with dominant players to continue and disruption to accelerate this shift.
- Stock selection focuses on earnings growth trajectory and within that, the emphasis lies on earnings surprises.
- Since valuations are at +1 STD from its historical averages, it is as much a driver of stock selection as earnings growth.
- We would be looking to be in large caps where scale will be an advantage (like banks), while midcaps will be sector leaders or niche players in their respective business. For example, specialty chemicals, tiles etc. In some cases, like real estate (which is a regional market share consolidation play), we have a mix of large and mid-cap players.

Key portfolio themes

- Our portfolios are high conviction portfolios with a cyclical tilt to be well positioned for the earnings growth and macro recovery cycle holding a medium to long term view.
- Portfolio construction is through bottom-up stock selection and there is an emphasis on sustainable earnings growth, relative earnings and earnings surprises.
- However, in the macro set up of rising rates, depreciating currency and slowing growth, corporate earnings would likely see a downward revision after second quarter results. On the other hand, valuation is elevated both in absolute and relative basis. In light of the above we have tamed our pro-cyclical bias slightly and increased our exposure in the defensive sectors to de-risk our portfolio.
- Our positioning in the portfolio is:
 - Overweight to Domestic cyclical plays: Our highest active sector weight remains financials which would see credit cost normalization and earnings expansion, followed by Auto which is benefitting from cyclical recovery and real estate on improving residential affordability and industry consolidation;
 - Small overweight to Capex oriented plays: Cement, industrials, and building materials – The capex push reiterated in the recent budget is a key positive for the sector.
 - Equalweight to Global growth plays: We see Technology and Chemicals as structural plays – but have equal-weight position given near term growth concerns and valuations higher than historical averages;
 - We are underweight on consumption (especially rural consumption), IT and regulated businesses like utilities and energy.

• Market capitalisation mix: Currently the allocation to large/mid/small caps are at 55.92%/37.68%/5.06% respectively. _____
