

HSBC EVOLVE Portfolio

Grow with Micro themes under Macro trends

Investment Approach: HSBC Evolve Portfolio

Investment Objective

The aim of the Portfolio is long term wealth creation from an actively managed portfolio of equity and equity related securities optimizing opportunities across the market capitalization spectrum without any sector bias. However, there can be no assurance or guarantee that the investment objective of the Approach would be achieved.

Description of types of securities

- Equity and equity related securities including convertible bonds and debentures and warrants carrying the right to obtain equity shares.
- Derivative instruments as may be permitted by SEBI / RBI.
- Units of overnight funds /liquid funds of HSBC Mutual Fund.
- Cash and cash equivalents
- Any other instruments as may be permitted by RBI / SEBI / such other Regulatory Authorities from time to time.

Basis of selection of types of securities

- The investment approach seeks to invest in companies across the entire market capitalization spectrum without any sector bias. The portfolio manager intends to do the same by buying equities of these companies and hence, equity and equity related securities are chosen for investment. The portfolio manager will focus on companies which have potential to deliver high growth.

Allocation of portfolio across types of securities

The investment approach has the mandate to invest in Equity and Equity related instruments of Large, Mid and Small cap companies without any sector bias.

Benchmark index for comparison of performance

- Regulatory Benchmark/ Strategy Benchmark: BSE 500 TRI

Investors should note that pursuant to Clause 2.3 of SEBI Master Circular for Portfolio Managers dated July 16, 2025, an option to invest directly, i.e. without intermediation of persons engaged in distribution services, is available to the investors.

Portfolio Manager's commentary:

Indian markets have been largely resilient in the last quarter of 2025 in the context of tariff negotiations, FII outflows and currency volatility. This is demonstrated by BSE 500 TRI INDEX rising 5.02% supported by domestic inflows, government support in the form tax cuts to support demand and interest cuts from the RBI.

Getting into 2026, India is one of the few countries with improving macro parameters on government deficit, low leverage on corporate balance sheets, low inflation and soft crude helping the current account. Also, with consumption being strengthened via tax cuts and various other reforms like Labor Code, de-regulation in banking, FDI limit liberalization in Insurance, roll back of Quality Control Orders, and liberalizing Nuclear Power liabilities the government seems to be in full throttle to accelerate GDP growth.

Though the US India trade deal is under negotiation, India has signed with NZ, UAE, Oman etc. and some of them have zero tariffs with the US and may become transshipment nodes for India (helping exports). India also negotiating a Free Trade Agreement with EU to revive exports to the region. Thus, there is a high likelihood of positive economic momentum both from an internal and external side which may revive earnings for the market.

As per Bloomberg, consensus estimates for NIFTY is expected to deliver a mid-teens earnings growth in FY27e. In case, the above plays out and there is broader revival in the economic activity we could see sharper upgrades in mid and small caps but one will have to be selective.

The HSBC EVOVLE portfolio is positioned to capture the upside from the India story with large, mid and small caps being approximately 32%, 42% and 20% of the portfolio. From a sector perspective, we are overweight in financials, consumer discretionary, healthcare and real estate while underweight in staples, energy and utilities. We are well placed across Red Oceans Winners which give stability to the portfolio (like telecom and large private banks), Blue Oceans – which are new themes (like internet and CDMO plays) and can be potentially growth stories. At the same time, there are some sectors and stocks which are seeing a cyclical revival, i.e. moving from pain to gain (like select NBFCs, small banks) and finally, beneficiaries of government reforms (like consumption stocks in autos, auto ancillaries, consumer durables).

We think a combination of the above will be able to generate wealth via compounding and re-rating over the long term for the patient investor.

Investment Approach: HSBC Evolve Portfolio

Rationale for selection of benchmark:

- This Investment approach is designed to offer broad based exposure across market capitalization and sectors in the Indian listed equity universe. BSE 500 TRI is suitably aligned with this investment approach.

Indicative tenure or investment horizon

- Medium to Long Term (3-5 years+)

Risk associated with investment approach

- The portfolio may perform differently from the broader stock markets/benchmark, in view of the limited number of stocks invested in by the fund manager. At times, Portfolios of individual clients may be concentrated in certain companies / industries. The performance of the Portfolios would depend on the performance of such companies / industries / sectors of the economy.
- Deployment of monies under the investment strategy will be oriented towards equity and equity related securities of companies belonging to various market capitalization which include large, mid and small cap. Stocks of mid and small cap companies usually have lower trading volumes on the exchanges, which may result into higher impact costs and longer execution time compared to large cap stocks.
- Also, in case the portfolio becomes more skewed towards the mid-small caps, this may increase volatility of the portfolio.

Sector Allocation

| Sector Name | % of Net Assets |
|-------------------------------|-----------------|
| Financials | 37.69 |
| Consumer Discretionary | 16.18 |
| Industrials | 10.01 |
| Health Care | 9.12 |
| Information Technology | 7.83 |
| Materials | 4.49 |
| Communication Services | 4.31 |
| Consumer Staples | 2.82 |
| Real Estate | 2.00 |

Market Capitalisation

| | |
|-------------------------------------|--|
| Large Cap: | 43.48% |
| Mid Cap: | 30.86% |
| Small Cap: | 20.11% |
| Avg. Weighted Market Capitalisation | Rs. 2,28,027 Cr |
| Median Market Capitalisation | Rs. 68,693 Cr |
| Large Cap: | 1st 100 company in terms of full market capitalization. Mid Cap: 101st to 250th company in terms of full market capitalization. Small Cap: 251st company onwards in terms of full market capitalisation. |

Investment approach & Red Ocean Blue Ocean* (ROBO) Analogy

....

RED OCEAN STRATEGY

- Compete in existing market space
- Beat the competition
- Exploit existing demand
- Make the value-cost trade-off
- Align the whole system of a firm's activities with its strategic choice of differentiation or low cost

Indigo, Bharti Airtel, Maruti

BLUE OCEAN STRATEGY

- Create uncontested market space
- Make the competition irrelevant
- Create and capture new demand
- Break the value-cost trade-off
- Align the whole system of a firm's activities in pursuit of differentiation and low cost

Eternal, PB Fintech, Trent

Structural tailwinds

These could be companies which are potential beneficiaries of central or state government reforms or investments. e.g. the Government of India has announced many reforms around GST which benefit consumption, Production Linked Incentive (PLI) to boost domestic manufacturing in electronics etc. These can lead earnings acceleration in these sectors in the medium term.

Pain To Gain

These stocks could be cyclical plays, which faced temporary headwinds due to regulations, slow-down in business cycle etc. In such cases, both or either valuation and earnings may have taken a hit and could provide attractive investment opportunities as the cycle turns favourable.

*W. Chan Kim and Renée Mauborgne, both INSEAD professors and leading thinkers in strategic management, introduced the Blue Ocean Strategy framework in their 2005 book, "Blue Ocean Strategy: How to Create Uncontested Market Space and Make the Competition Irrelevant."
