Portfolio Manager's commentary:

Higher volatility seems to be a norm in Indian stock markets for past few months due to geopolitical situation, FII outflows & crude prices. Higher crude oil prices and global geopolitical uncertainty continue to create pressure on the domestic macroeconomic environment. During October month, Inflation moved above 5%, while WPI inflation crossed 10%, exceeding expectations. The RBI has raised the repo rate to 5.50% after four consecutive MPC meetings without a change. At the same time, the upcoming festive and wedding seasons could provide some support to discretionary consumption. Global growth remains uneven amid geopolitical tensions, persistent inflation and policy uncertainty. Sticky inflation, elevated energy prices and US bond yields, partly driven by fiscal concerns, continue to complicate the monetary policy outlook and weigh on global liquidity. Tensions in West Asia and risks to energy supplies add to inflationary pressures, while upcoming US midterm elections and political developments in Israel could further influence policy direction and market sentiment. Against this backdrop, crude prices, US yields and monetary policy shifts will remain key drivers of global risk appetite, currency movements and capital flows into emerging markets, including India.

Several high frequency indicators such as GST collection, direct tax collections, credit growth, power demand and earnings growth suggest better than expected growth in underlying Indian economy. Corporate earnings have sustained their growth momentum in 2QFY27 so far, building on a meaningful recovery witnessed in 1QFY27 after two years of muted performance. More importantly, the recovery is not merely reflected in aggregate earnings growth but is increasingly broad-based across sectors, despite persistent commodity cost pressure and an uncertain global environment. With 134 companies in BSE 200 universe having reported so far, normalised PAT grew 34% yoy. Besides oil and gas, Power/Coal, Metals, Infrastructure and Pharma reported earnings ahead of consensus, while consumer staples, autos and chemicals have missed estimates thus far. Despite a challenging operating environment, 2QFY27 earnings indicate that corporate India continues to demonstrate resilience.

The outcome of the US midterm elections could result in (1) more stable geopolitics and (2) lower crude oil prices, assuming a durable end to the ongoing Iran-US conflict. We expect India's macroeconomic position to improve dramatically over the next few months, as crude prices come down to 'normal' levels on likely improved supply-demand balance.

Alongside strong corporate earnings, we expect relative sentiment towards Indian equities among foreign investors to improve, driving portfolio flows in the near term. This is supported by low starting expectations, reflected in valuations below post-pandemic averages across most sectors, and by the correction in AI stocks — the Nifty has outperformed the AI-heavy indices of Korea, Taiwan and the NASDAQ. A possible LTCG cut for foreign institutional investors, the fall in global yields and expectations of the INR holding up on central bank intervention lend further support. On flows, foreign holdings in Indian stocks is currently at all-time lows of 14%.

As legendary investor Howard Mark says, the road to long-term investment success runs through risk control more than through aggressiveness. Due to our disciplined investment approach & not being influenced by euphoria in certain pockets of the market, the portfolio has outperformed over different time periods. We continue to adhere to our investment discipline: cash flow generation, conservative capital structure, durable business model, attractive valuation and quality management. #Our HINP portfolio is strongly positioned to build wealth in the medium to long term.

Achievement of this objective is not assured, and investments are subject to market risks, including possible loss of capital.

Basis of selection of types of securities

The investment approach is to create long term wealth for investors by participating in companies from sectors that are likely to be beneficiaries of transformation in the Indian economy including themes such as, digitization, consumption, GLOCAL i.e. Global companies working in local markets, etc. The portfolio manager intends to do the same by buying equities of these businesses and hence, equity and equity related securities are chosen for investment. The portfolio manager may, from time to time, invest un-deployed funds in units of liquid funds/ overnight funds of HSBC Mutual Fund including cash and cash equivalents for cash management purposes

*** For cash management and pending deployment in the portfolio**

Risk associated with investment approach

Deployment of monies under the investment strategy will be oriented towards equity and equity related securities of companies belonging to themes/sectors that are likely to be beneficiaries of transformation in the Indian economy including themes such as digitization, consumption, GLOCAL i.e. Global companies working in local markets, etc. and hence will be affected by risks associated with these industries as well as any factors that affect the broader macro-economic environment such as interest rate changes, liquidity, cross border fund flows, statutory/regulatory changes etc.
Since the portfolio is expected to be concentrated with exposure to select themes/sectors, it may perform differently from the broader stock markets/ benchmark but may still be impacted by broad market movements. It is likely that the portfolio may also experience period of volatile performance and liquidity challenges in view of the limited number of stocks invested in by the fund manager.
